| DW | TI | HHHH | 0 ~ ffff* | Integer Tables |

Note: The formats of TM, TD, TF and TI in PLC software are represented as TXA[B]. "X" can be M, D, F, or I.

The address range of B is 0~FF, and A is 0~FF. The device type is AABB, and the range depends on the PLC settings.

For example: Model PO3242, range of "A" is "0" and range of "B" is 0 ~ 7.

BACnet/IP

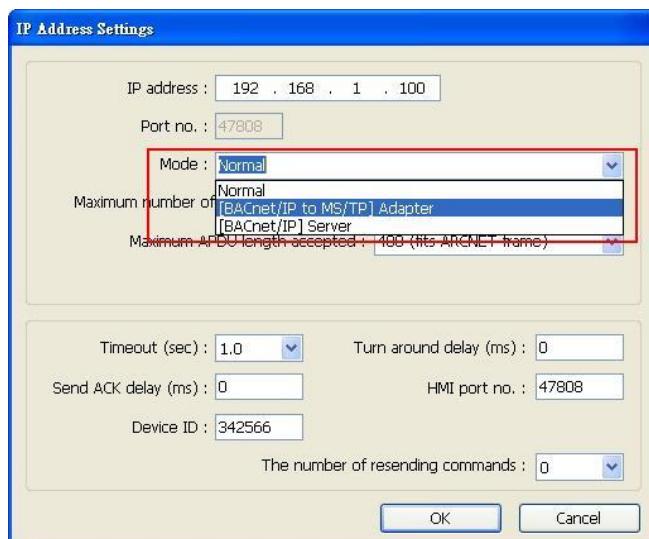

Supported series: BACnet/IP protocol devices

HMI Setting:

| Parameters | Recommended | Options | Notes |
|---------------------|-------------|-------------|--|
| PLC type | BACnet/IP | | |
| PLC I/F | Ethernet | | |
| Port no. | 47808 | | 47808 is the standard communication port of BACnet protocol. |
| HMI port no. | 47808 | 49152~65535 | Different HMI ports are required when connecting multiple |
| Device ID | 342566 | 0~999999 | According to device. |
| PLC sta. no. | 1 | | |

BACnet/IP to MS/TP Adapter Setting:

1. When using BACnet/IP driver, please correctly set “Mode”, “Maximum number of segments accepted”, and “Maximum APDU length accepted” according to the actual device.

**BACnet/IP to
MS/TP adapter**

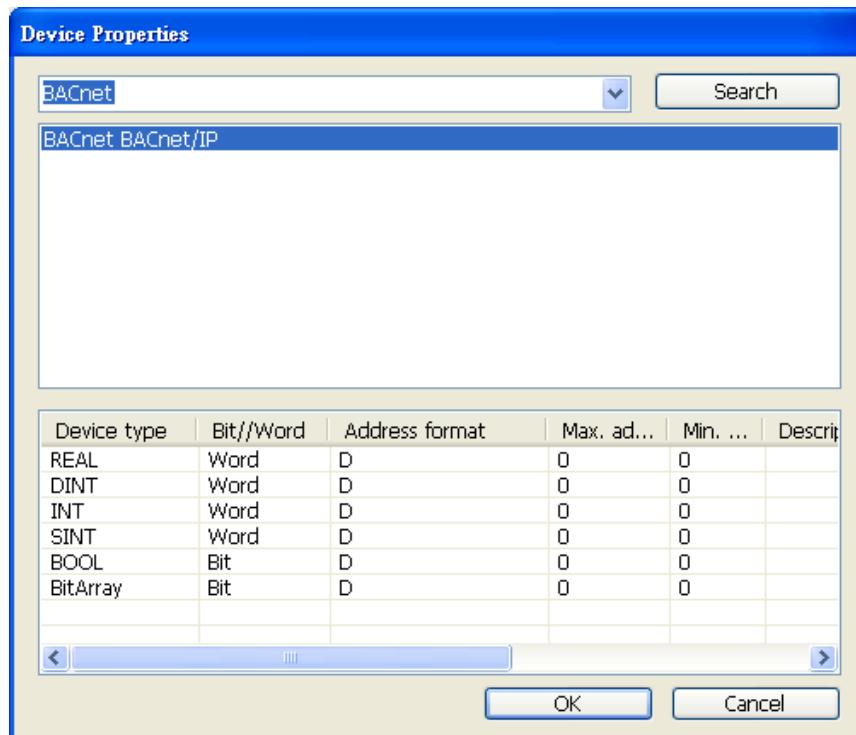

2. As shown above, in BACnet/IP to MS/TP Adapter mode, [Network number] must follow the factory setting, and enter the device station number in [Device ID].

3. [HMI port no]. default: 47808, can be filled in other effective value.

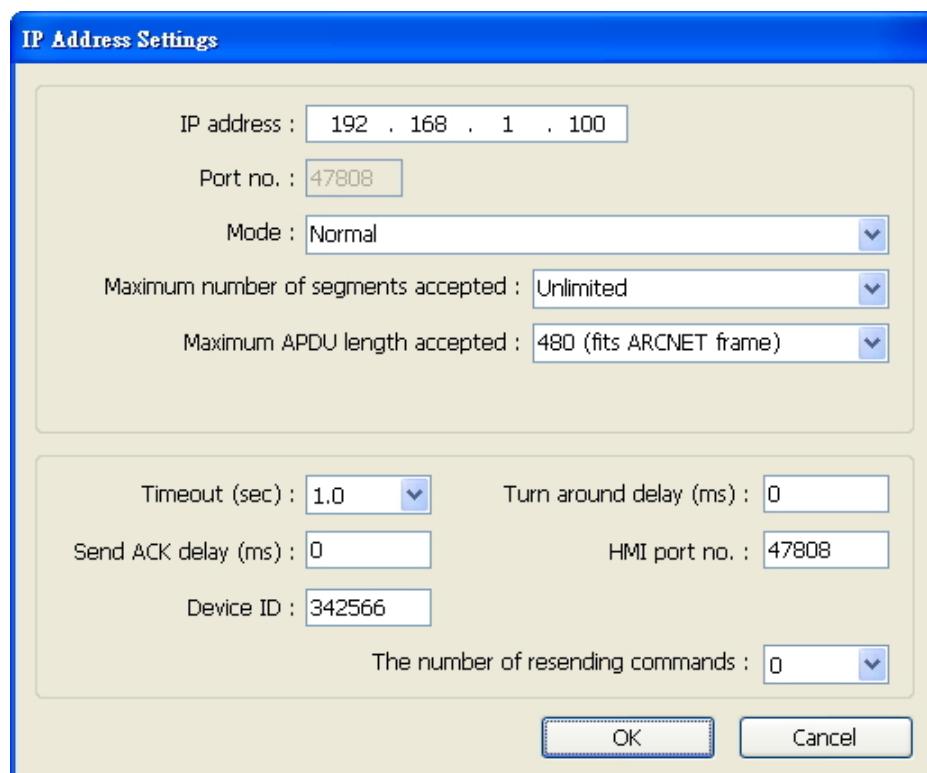

How to Import Tags:

EasyBuilder Pro provides two ways to gain tag addresses. One is to directly get tag information via internet, another is to export the generated CSV file via SCADA, and then import to EasyBuilder Pro. The following introduces how to import tag address information.

Step 1. Add BACnet/IP driver in System Parameters Settings

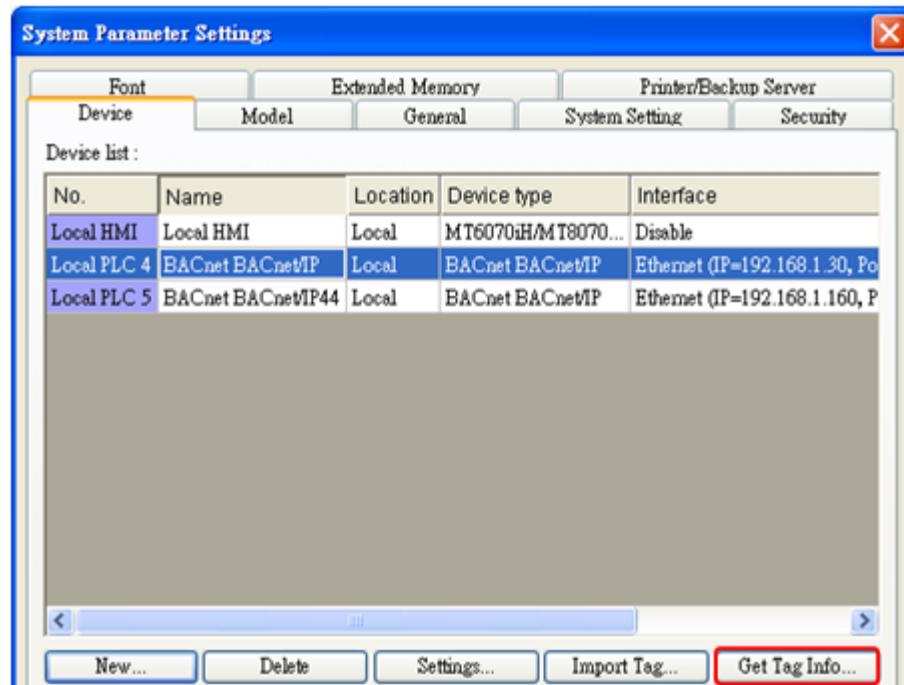

Step 2. Correctly set the relevant parameters.

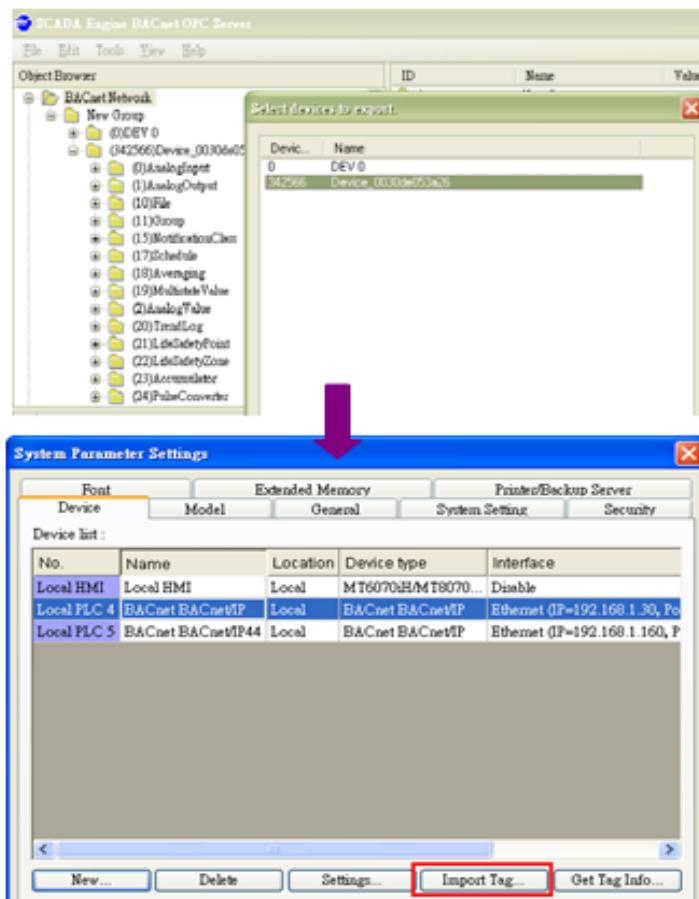

Step 3. Get tag address information

Way 1: Click **Get Tag Info**.

Way 2: Import the CSV file generated by SCADA software.

CSV file content is shown below; users can build the file and import:

- Object format
- OBJECT NAME (user defined tag name, EasyBuilder will start reading data from the 6th row of CSV file.), DEVICE ID, OBJECT TYPE(object ID) and INSTANCE(object address)

| A1 | | | GROUP_ID |

|------------------|----|---------------------|----|

How to Import Tags:

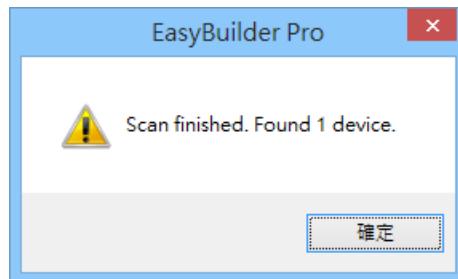

1. In EasyBuilder **System Parameter Settings** add **BACnet/MSTP** driver, set the communication parameters, and then click **Tag Manager** button.

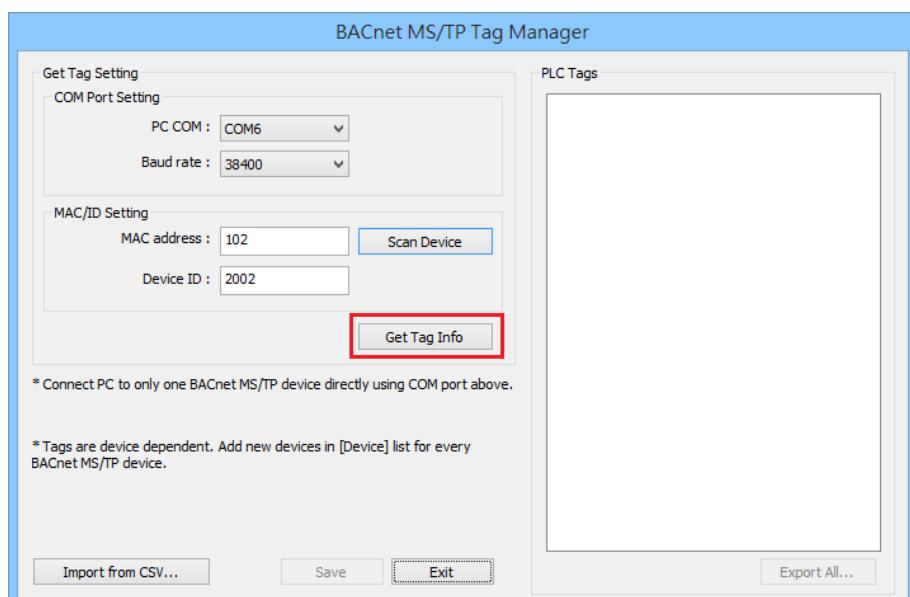

2. Use a RS-232/RS-485 converter to connect the BACnet MS/TP unit with PC. Only one BACnet MS/TP unit is allowed. Set **PC COM** and **Baud rate**, click **Scan Device** button to find the **MAC address** and **Device ID** of the BACnet MS/TP unit.

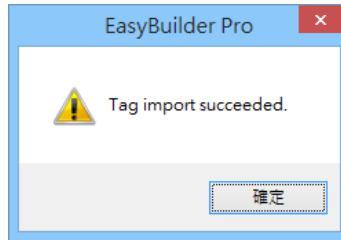

3. If the device is found, the following message shows, click **OK**.

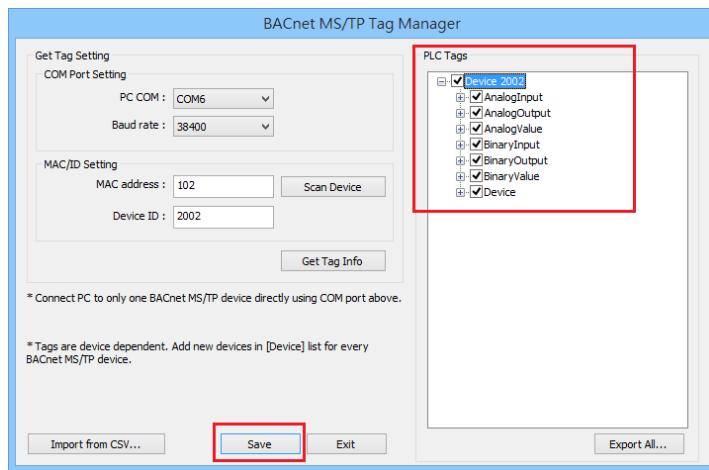

4. After getting the **MAC address** and **Device ID**, click **Get Tag Info** button to get the address tags.

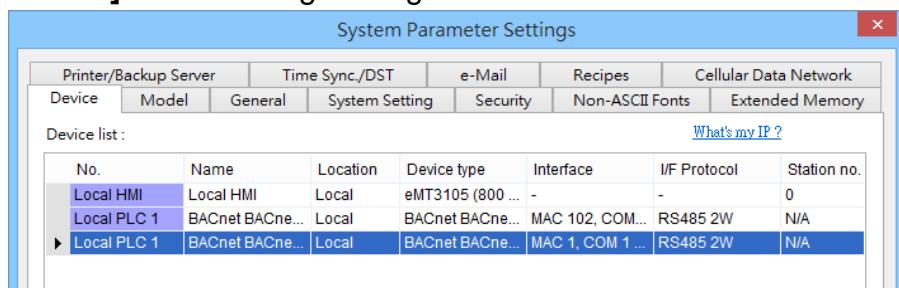

5. If the tags are obtained successfully, the following message shows, click **OK**.

6. In the **PLC Tags** field, the tags with its check box selected can be imported. After selecting the tags, click **Save**, and then click **Export All**, to save the address tags as CSV file. When finished, click **Exit** to finish importing address tags.

7. To connect another BACnet/MSTP unit, please add the **BACnet/MSTP** driver in EasyBuilder System Parameter Settings again. The communication parameters will follow the settings of the firstly added unit. The way to get tag information is the same as illustrated in the preceding steps. Another way to get tag information is to click **[Import from CSV]** button in Tag Manager.

Notes:

1. The MAC address and Device ID of certain BACnet MS/TP units can be gained by clicking [Scan Device] only at the first time the unit is powered up. To get this information in the same way again, please power up the unit again.

2. Certain BACnet MS/TP units do not support [Scan Device] and [Get Tag Info].
3. If the MAC address gained by clicking [Scan Device] does not match the one specified in EasyBuilder Pro Device Properties settings, a message shows as a reminder when [Get Tag Info] is clicked.

| W | RESULT | D | 0 | *Note 2 |

1. RESET: If set on, clears the data of BARCODE and RESULT, and clears FLAG to OFF.
2. RESULT: Indicates the result of data reading.
The following values indicate:
0 : Waiting to read BARCODE.
1 : BARCODE is successfully read.
2 : Invalid BARCODE format.
3 : Exceeds the number of bytes specified in [Read byte limit].
4 : The Start Code of the data read does not match the setting.
5 : The Terminator of the data read does not match the setting.

Beckhoff ADS/AMS (Ethernet)

Supported Series: Twincat

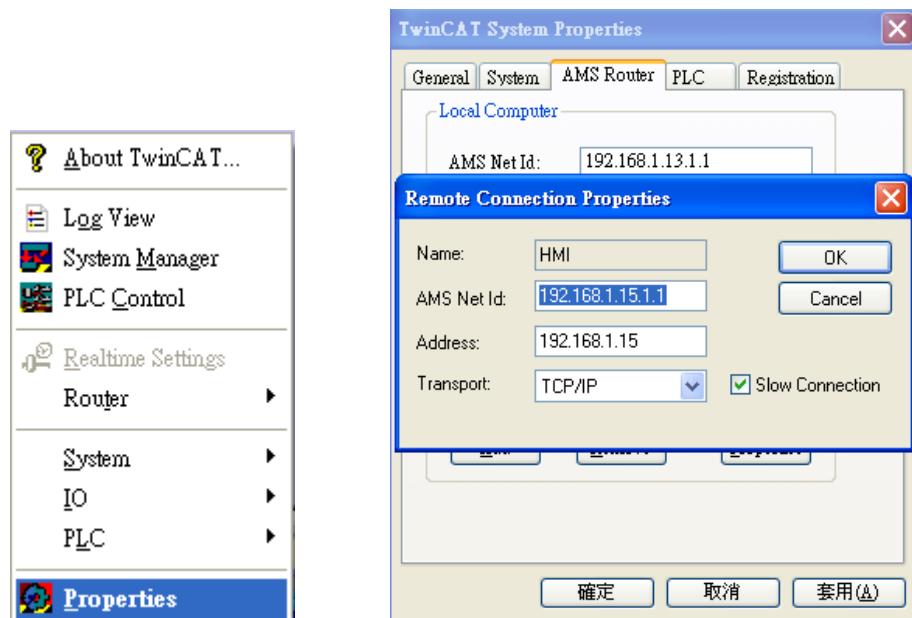

HMI Setting:

| Parameters | Recommended | Options | Notes |
|--------------|-----------------------------|--------------------|-------|
| PLC type | Beckhoff ADS/AMS (Ethernet) | | |
| PLC I/F | Ethernet | | |
| Port no. | 48898 | | |
| ADS port | 801 | 801, 811, 821, 831 | |
| PLC sta. no. | 1 | | |

PLC Setting:

Step1.

Open TwinCat System Properties.

PLC Settings: Set HMI Name, AMS Net ID, and Address.

Ex:

HMI IP: 192.168.1.15

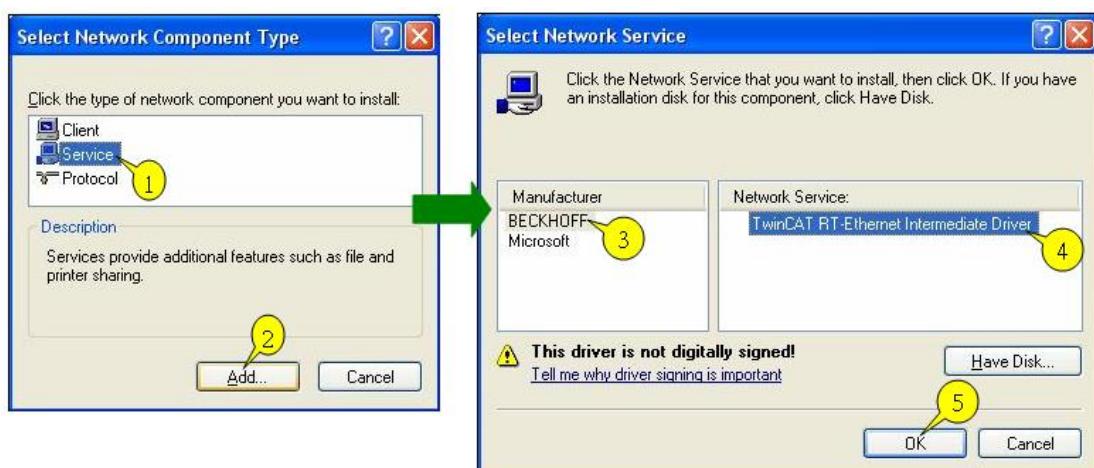

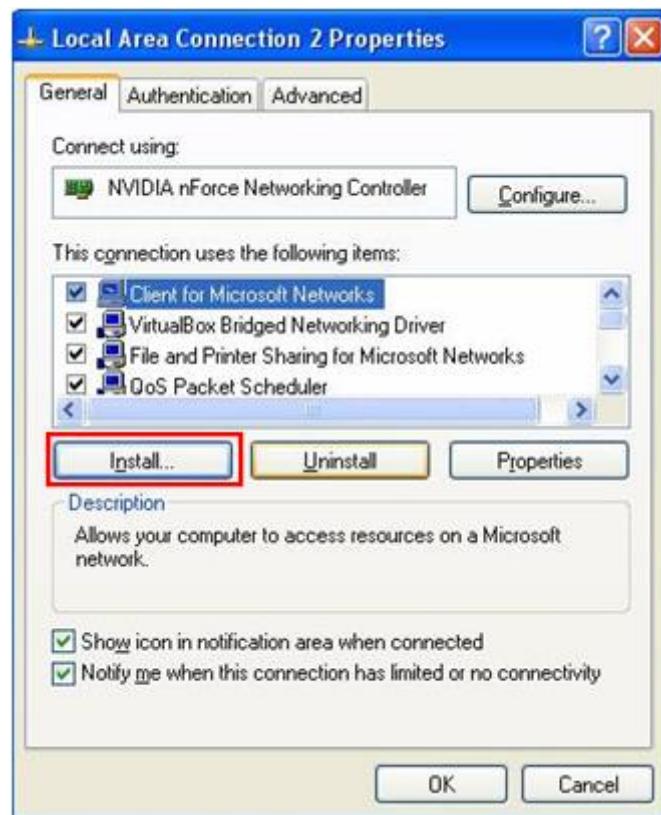

AMS Net ID: Must input 192.168.1.15.1.1

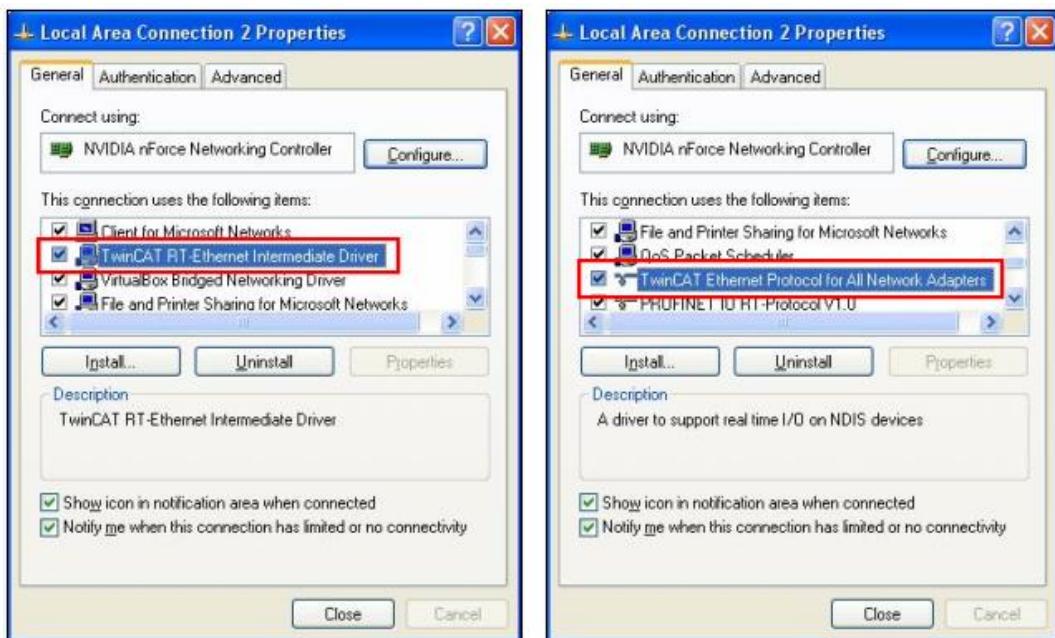

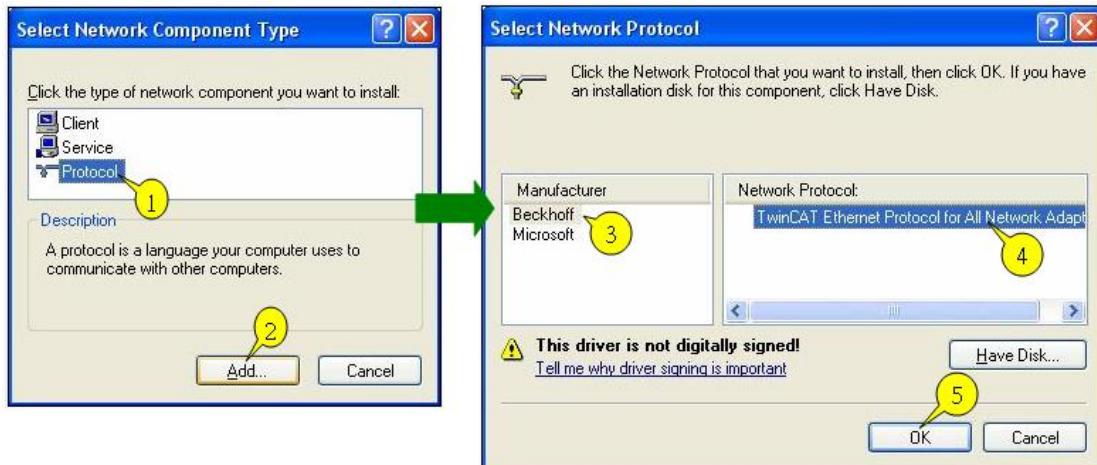

Address: 192.168.1.15

Name: Input "HMI" or any user-defined name.

Step2.

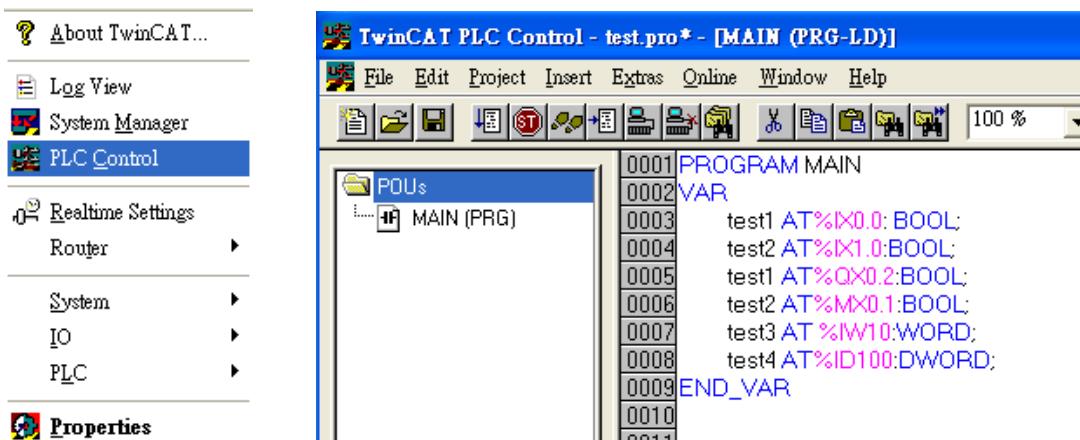

Simulate PLC on PC. 2 Twincat drivers must be installed as follows:

Step3.

The following commands can be utilized for Twincat PLC to output the parameters observed.

PS. Twincat PLC

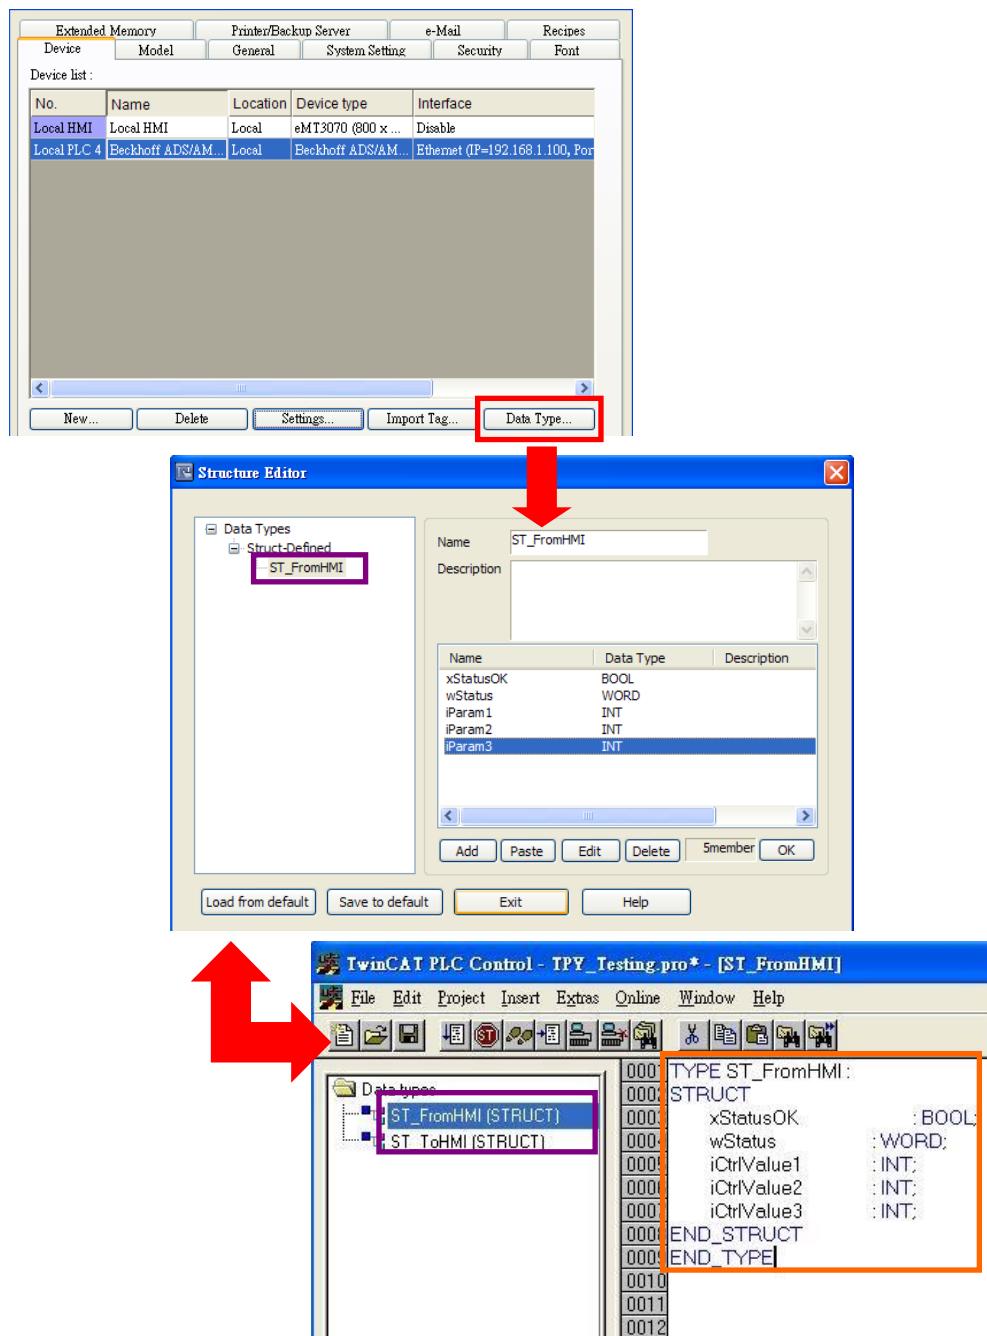

IX, QX, MX - Must output in BOOL type.

IW, QW, MW - Must output in UINT, WORD, and INT types.

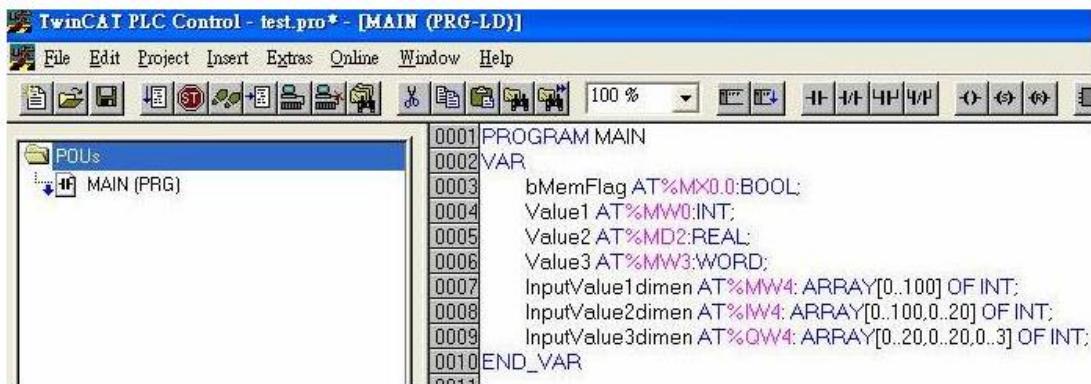

ID, QD, MD - Must output in UDINT, DWORD, and DINT types.

This driver supports variables under STRUCT structure. Click [Data Type] to open Structure Editor and create the same [Name] and [Data Type] as in Twincat PLC Control. The standard data types include:

BOOL, WORD, INT, UINT, DINT, UDINT, REAL, DWORD, ARRAY

The syntax of Tag in Twincat software is: Tag Name +AT%+Type, as shown in the following figure.

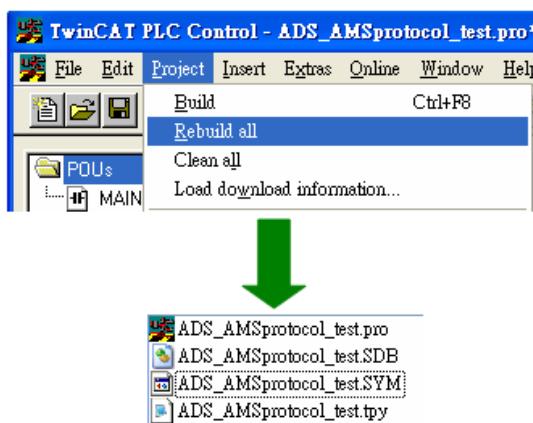

```

```

Project -> Rebuild all

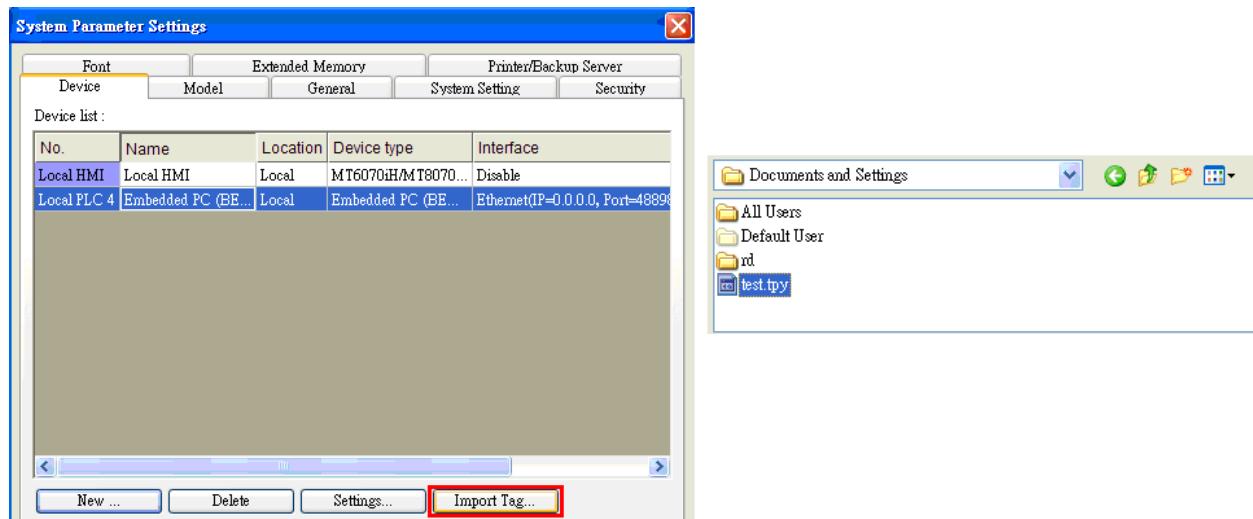

Step4. Set PLC IP in EasyBuilder.

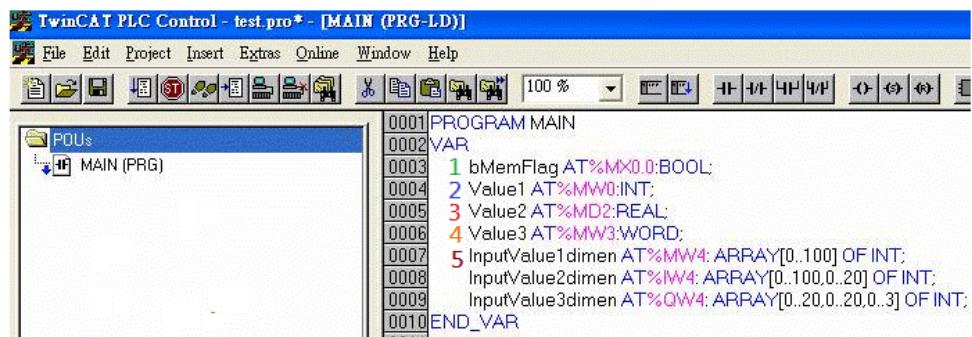

Step5.

Click [Import Tag] button in EasyBuilder to open the TPY file compiled by Twincat PLC Control.

Note: When using Beckhoff driver, if the TPY file cannot be imported, try download and install MSXML 4.0 in Microsoft - Download Center.

Import tpy to EasyBuilder, the result is shown in the following figure.

Step6.

The following dialog box appears for users to select all or part of the data to import. A reminding message is shown when import the same data repeatedly.

*EasyBuilder8000 does not support [Comment] setting.

Step7.

Download the project compiled in EasyBuilder to HMI.

| PLC sta. no. | 1 | | |

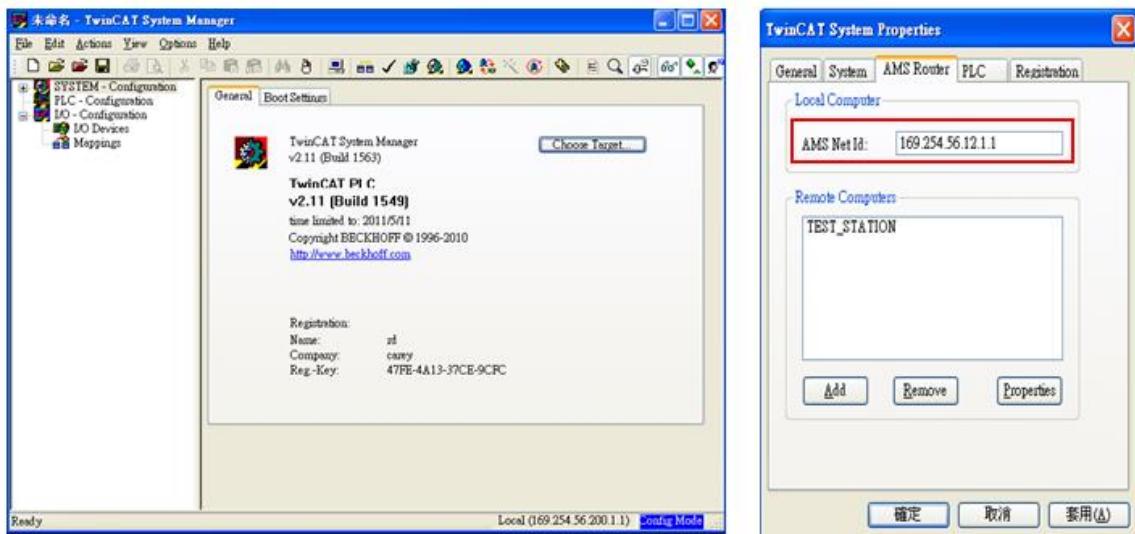

PLC Setting:

For Twincat:

- Confirm PC IP address

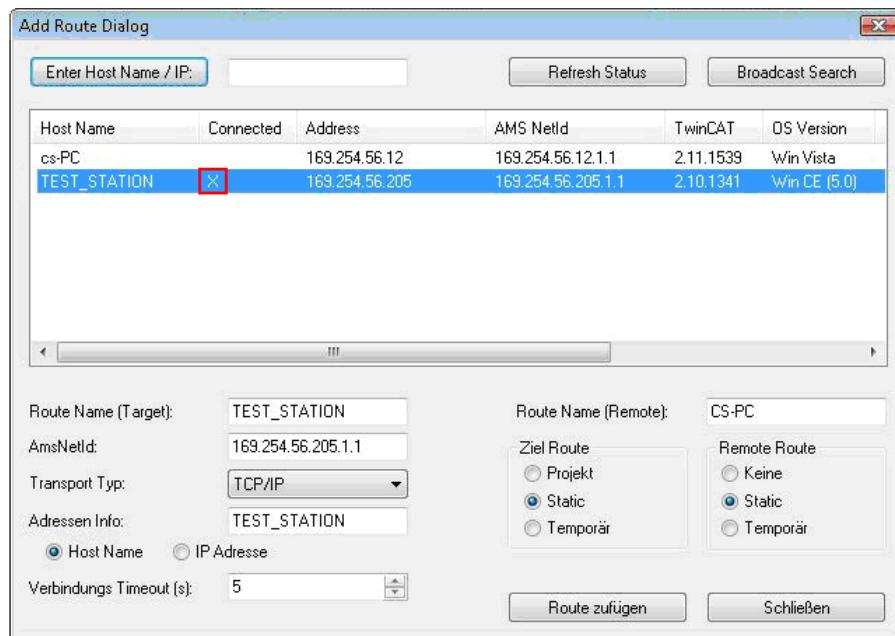

- b. Open Twincat, Set IP address 169.254.56.12.1.1

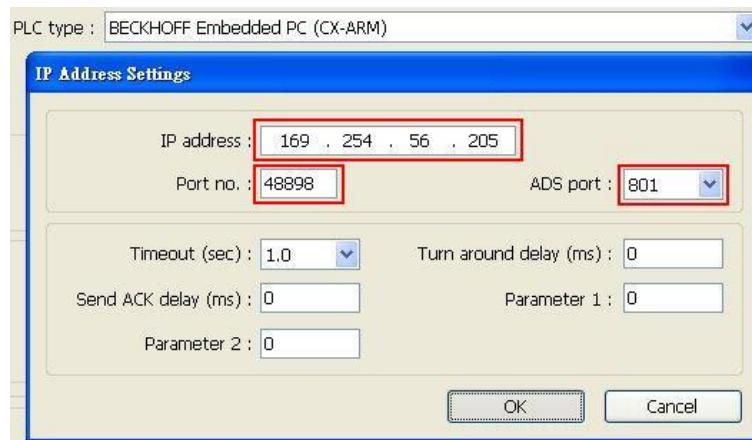

- c. Use Twincat to build a Route Table to make sure the system is connected, if PLC power turns OFF and then ON, please redo this step.

Note: when connected, if "X" is displayed, the connection succeeded.

- d. Open EasyBuilder, set IP address, ADS port and Port no.

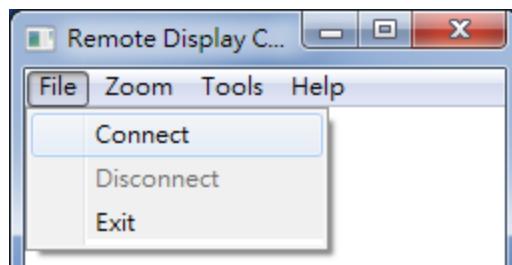

- e. Run on line simulation.

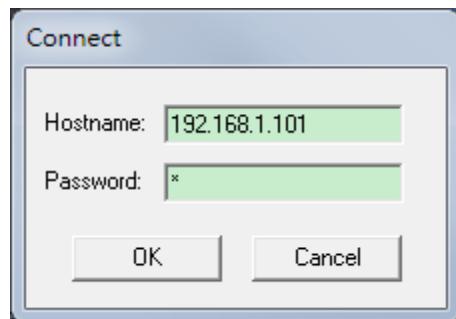

Note: If the project is downloaded to HMI, please set HMI IP 169.254.56.12 identically to Twincat IP address setting.

For CERHOST:

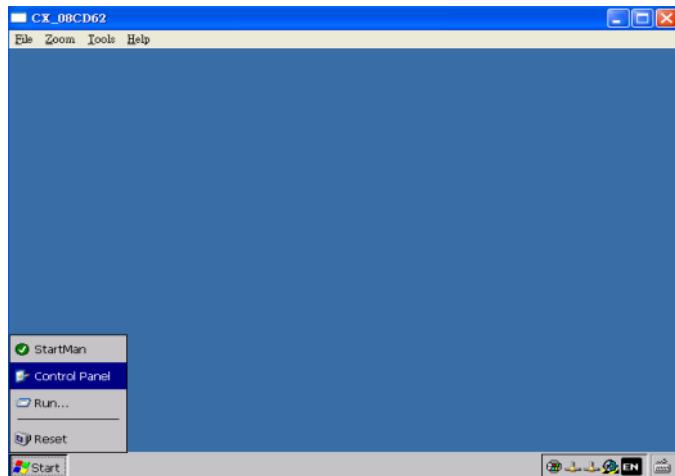

- a. Execute CERHOST.exe to connect with PLC on PC.

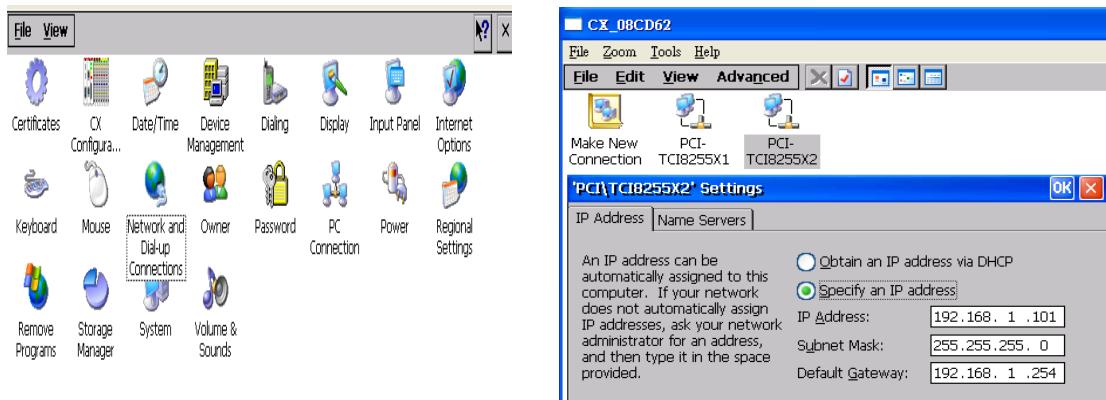

- b. Enter PLC IP and Password (default password: 1).

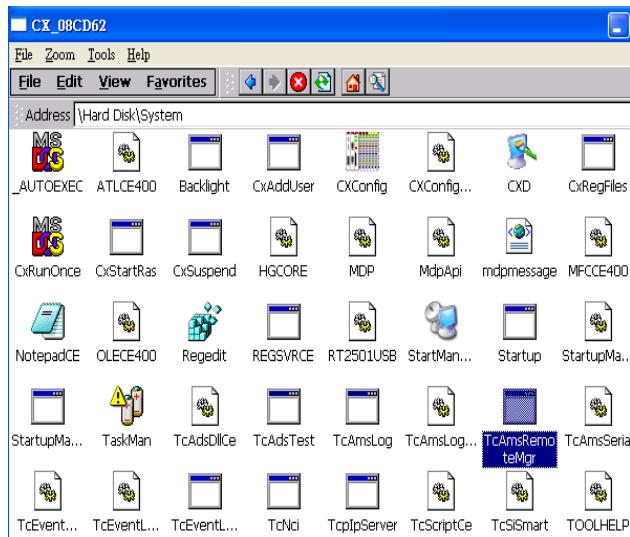

c. Succeeded to connect with PLC, click Start -> click Control Panel.

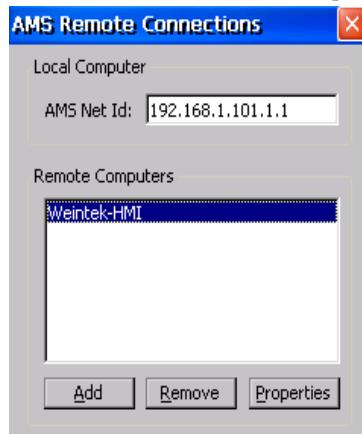

d. Click [Network and Dial-Up Connections] to display PLC device information; select the PLC to check its IP.

e. Access PLC system settings, the default directory: \Hard Disk\System, execute [TcAmsRemoteMgr].

f. AMS Net Id consists of 6 numbers, separated by “.”. The first 4 numbers stand for IP and followed by “1.1”. The figure below shows the AMS Net Id of Local Computer, please enter PLC IP plus “1.1”. Remote Computers shows the information of the HMI to connect with. Click [Add] to add the HMI and click [OK] to finish setting.

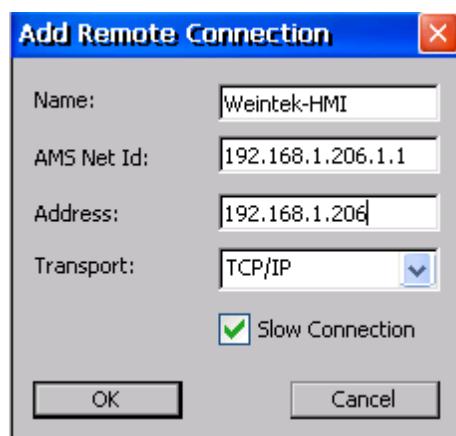

g. Name: Device name.

AMS Net Id: The IP followed by “1.1” of the device to connect with.

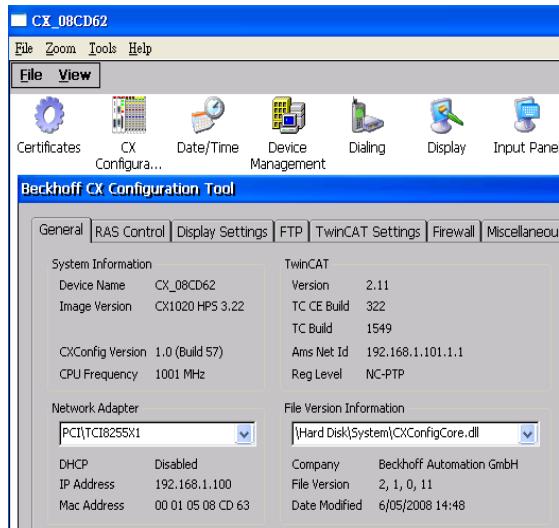

Address: The IP address of the device to connect with.

Transport: The way of connection.

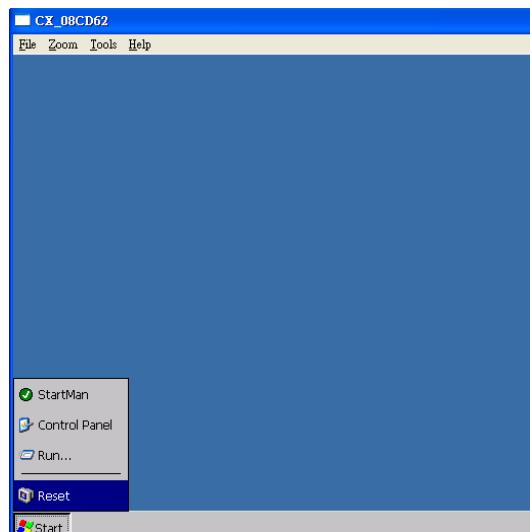

Slow Connection: As shown in the figure below.

h. Return to Control Panel; execute CX Configuration Tool to confirm PLC AMS Net Id.

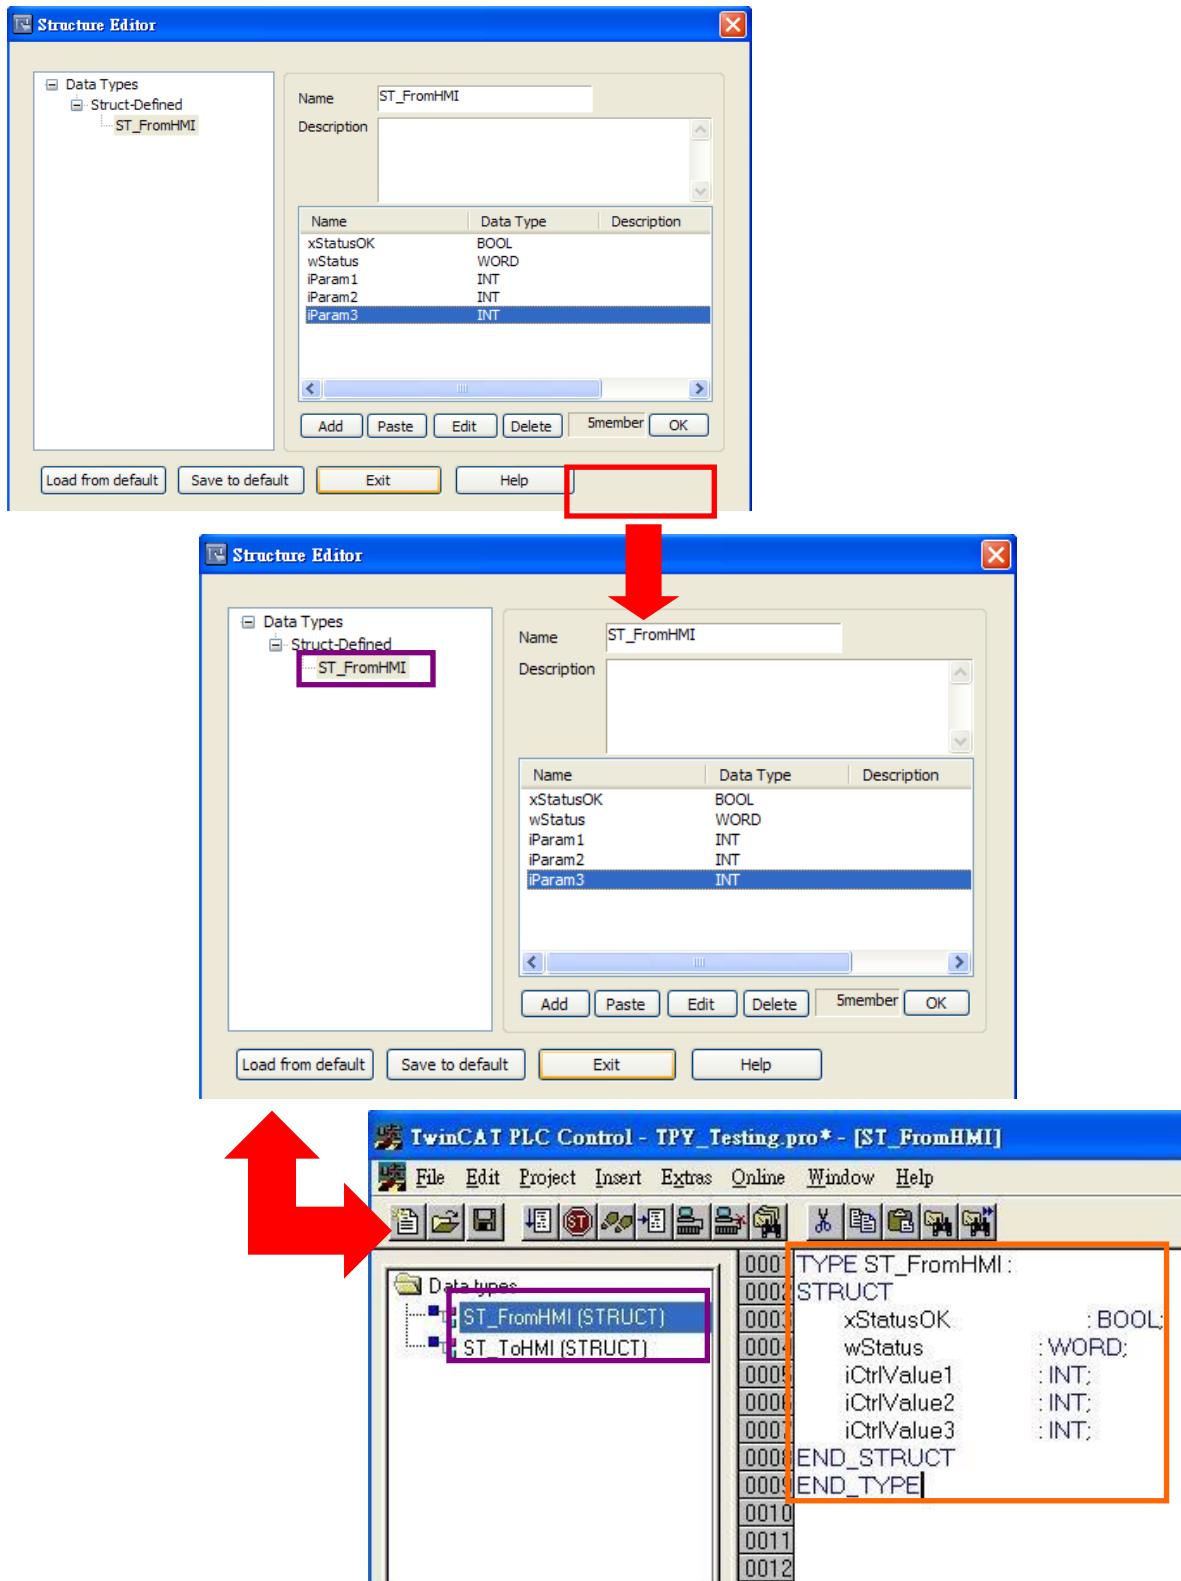

i. Confirm settings and click Start -> Reset PLC.

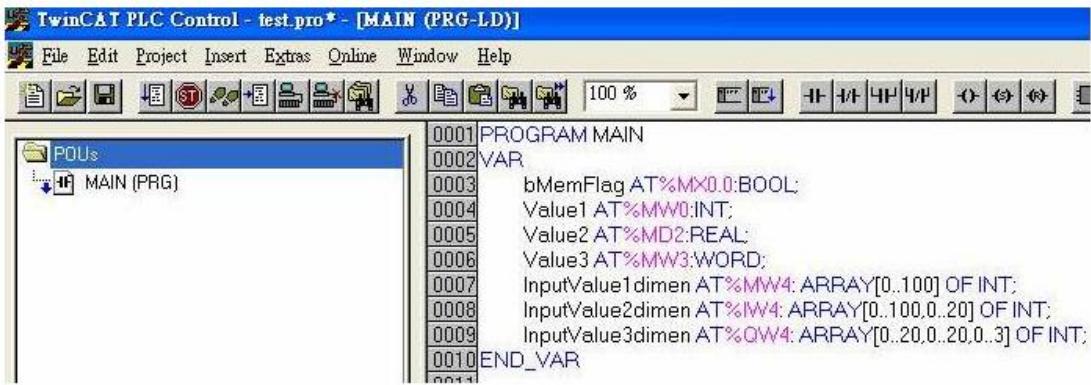

Building Data Structure :

How to Import Tags:

The files generated after compilation in TwinCAT2 and TwinCAT3 programming software can be directly imported to EasyBuilder. The following steps explain how to import address tags.

1. Go to System Parameter Settings and add “Beckhoff TwinCAT PLC (Ethernet) – Free Tag Names” to the device list. Click [Settings] and configure the PLC parameters.

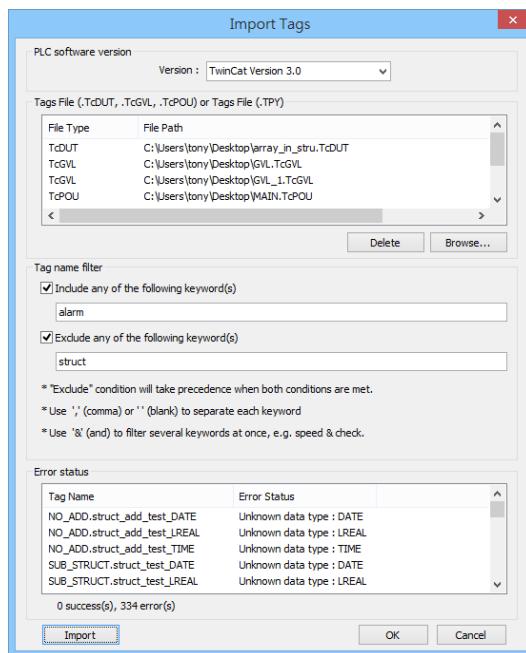

2. Go to System Parameter Settings » Tag Editor and click [Import].

3. Select PLC Software Version. The standard file type of TwinCAT 2.0 is .typ. The standard file types of TwinCAT 3.0 are: .TcDUT, .TcGVL, and .TcPOU. The tags to be imported can be selected by a tag name filter. Select the file type and then click [Import]. The invalid address types will be displayed in Error Status field. Click [OK] to leave.

Note1. Tag name can not include “.”.

Note2. GVL files with Tc2GvlVarNames attribute are not supported.

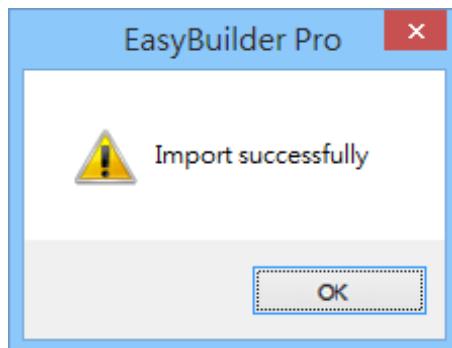

```

1  [attribute 'Tc2GvlVarNames']
2
3  VAR_GLOBAL      Not Supported
4      nVar:INT;
5  END_VAR

To minimize signal reflection on the CAN bus network, termination resistors should be installed at both ends of the network, as shown in the following figure. (eMT3070A has built-in termination resistor, so it is not required for eMT3070A)

Demo Project Link:

CAN Bus 2.0A/2.0B General and SAE J1939

Supported series: CAN Bus 2.0A / CAN Bus 2.0B / SAE J1939.

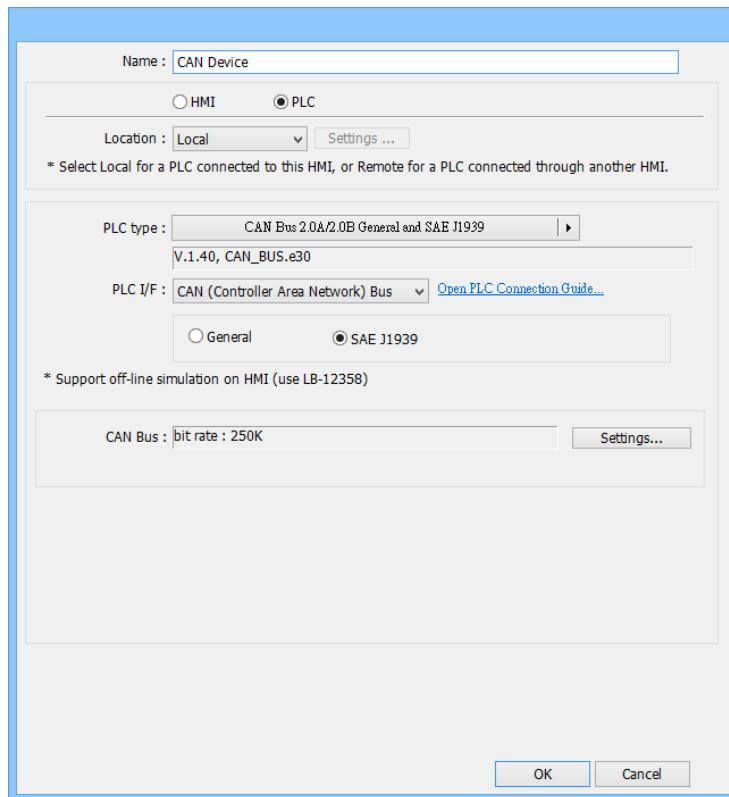

HMI Setting:

| Parameters | Recommended | Options | Notes |
|------------|---|---------------------|-------|
| PLC type | CAN Bus 2.0A/2.0B General and SAE J1939 | | |

| | | | |
|------------------|----|---------------------|----|
| Online simulator | NO | Extend address mode | NO |
|------------------|----|---------------------|----|

How to import SAE J1939 address tags:

1. In EasyBuilder Pro add [CAN Bus 2.0A/2.0B General and SAE J1939] driver.

2. Open Address Tag Library, select [**User-defined tags**] and then click [**New**].

3. Name: Enter the tag name.

PLC: Select the **SAE J1939**

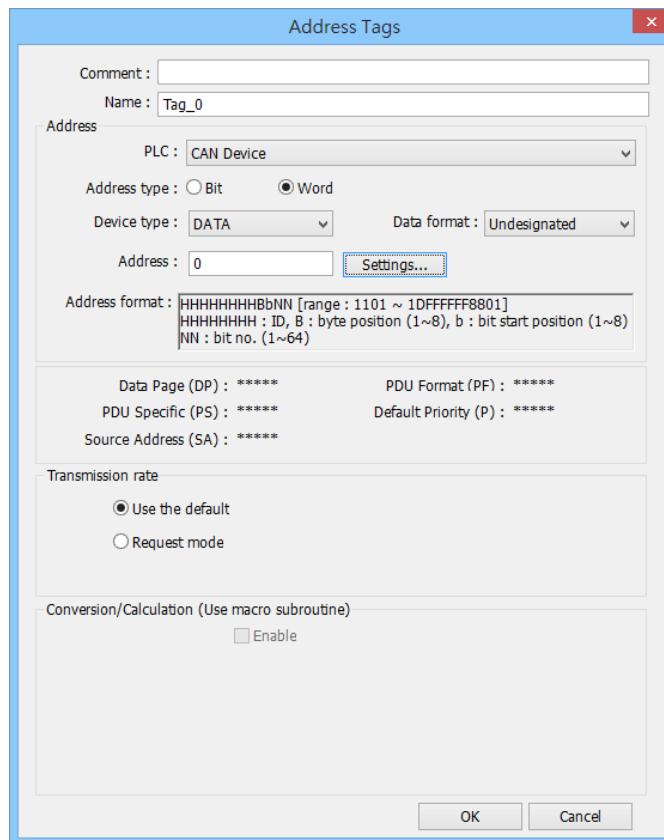

Address type: Select **Bit** or **Word**.

Transmission rate:

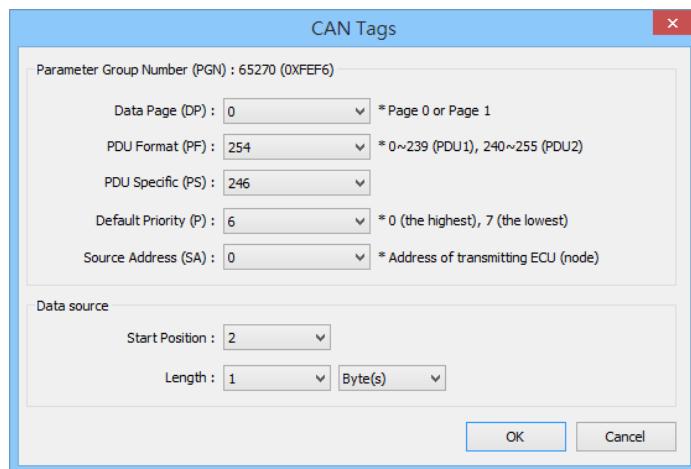

If [**Use the default**] is selected, then HMI will wait for the reply from CAN device.

If [**Request mode**] is selected, then HMI will send polling packet.

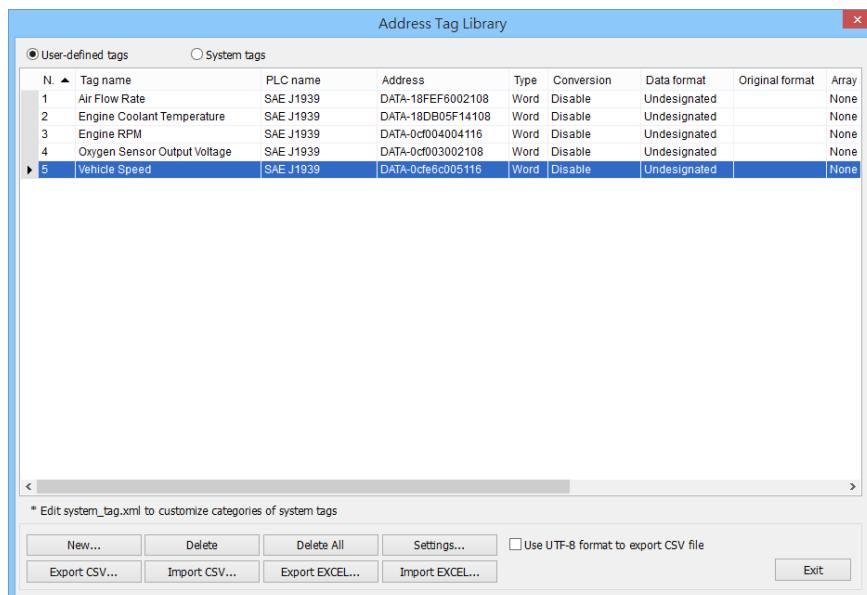

After entering the above information, click [**Settings**].

4. Please set the following parameters according to the specification of the CAN device used.

5. After building the tags click [Exit].

| DW | 5x | DDDDD | 1 ~ 65535 | 4x double word swap |
| W | 6x | DDDDD | 1 ~ 65535 | 4x single word write |

Note1: MAX1W and 4X_32Bit read/write 1 word for each package and display a 32-bits value, whereas MAX2W reads/write 2 words for each package.

Note2: Go the [System Parameter Settings] -> [Device Properties] and click [Conversion] to set the data format of device types 3x, 4x, 6x, 3x_double, 4x_double.

NOTE:

Address type “5x” is mapping to Hold Reg. The communication protocol of 5x is almost the same as “4x” except that “5x” swaps double word.

If 4x contains the following information:

| Address | 1 | 2 | 3 | 4 | 5 | 6 | ... |
|--------------|---------|-----|---------|-----|---------|-----|-----|
| Data in word | 0x1 | 0x2 | 0x3 | 0x4 | 0x5 | 0x6 | |
| Data | 0x20001 | | 0x40003 | | 0x60005 | | |

For 5x, it will be:

| Address | 1 | 2 | 3 | 4 | 5 | 6 | ... |
|--------------|---------|-----|---------|-----|---------|-----|-----|
| Data in word | 0x2 | 0x1 | 0x4 | 0x3 | 0x6 | 0x5 | |
| Data | 0x10002 | | 0x30004 | | 0x50006 | | |

Modbus RTU function code:

| | | |
|----------------|----------------------------|-------------------------------|
| 0x | 0x01 Read coil | 0x05 write single coil |
| 0x_multi_coils | 0x01 Read coil | 0x0f write multiple coils |
| 1x | 0x02 Read discrete input | N/A for write operation |
| 3x | 0x04 Read input register | N/A for write operation |
| 4x | 0x03 Read holding register | 0x10 write multiple registers |
| 5x | 0x03 Read holding register | 0x10 write multiple registers |

(Note: reverse word order in double word format)

3xbit is equivalent to 3x

4xbit is equivalent to 4x

| | | |
|----|----------------------------|----------------------------|
| 6x | 0x03 Read holding register | 0x06 write single register |
|----|----------------------------|----------------------------|

(Note: 6x is limited to device of one word only)

How to Import Tags:

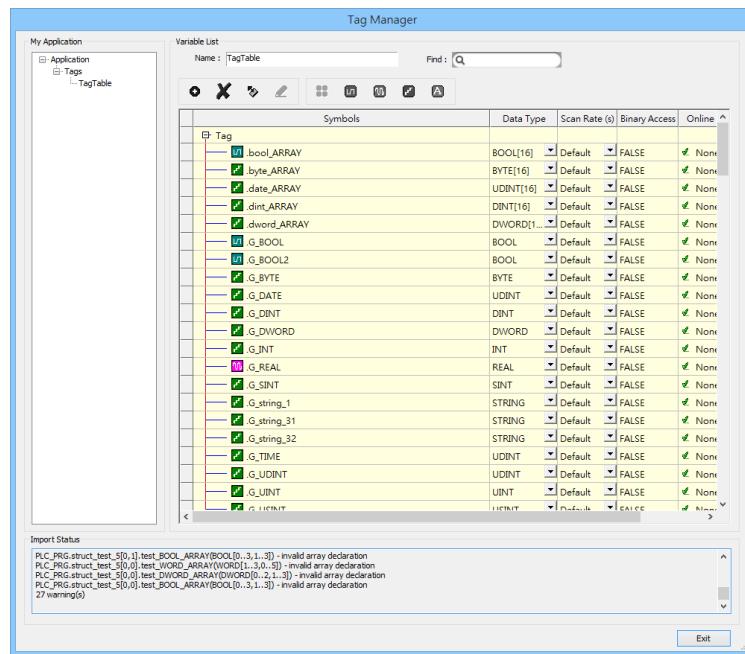

- Click [New] to add [CODESYS V2 (Symbolic Addressing)] driver, and then click [Tag Manager].

- Select [Get Tags] » [Import Tags], and then select the Tag (.SYM_XML) to be imported.

5. The successfully imported tags will be listed in a table. If any unsupported data type exists, a warning message will show in [Import Status] field.

Note: Generate *.SYM_XML

1. [Project] -> [Options] -> [Symbol configuration] , select [Dump symbol entries] and [Dump XML symbol table].
2. Open [Configure symbol file], select [Export data entries]

Multi-HMIs-Multi-PLCs Communication Setting:

[PPI]

For S7-200 PLC, Multi-HMIs-Multi-PLCs communication can be achieved using S7/200 PPI driver, please refer to the settings below.

IN EasyBuilder COM Port Settings, two important parameters must be set:

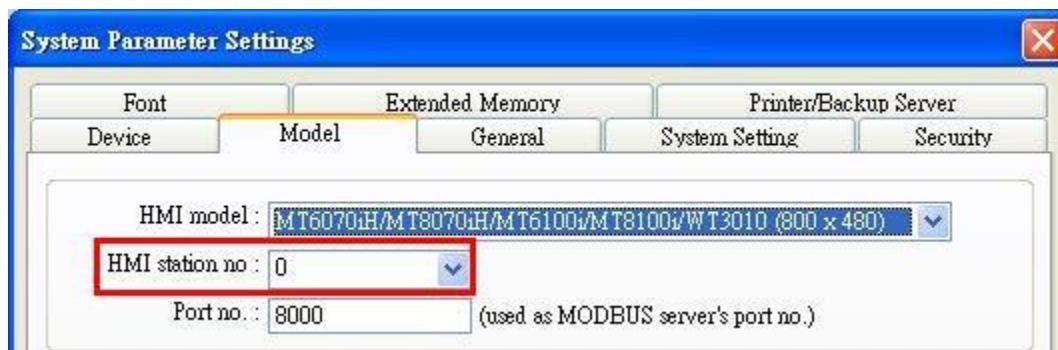

1. [High station address (HSA)]:

Setting Max. Station Number of HMI in PPI network.

For the effectiveness of system operation, it is highly recommended that the HMI station number starts from zero and go on sequentially. If there are 4 HMI in PPI network, set station no. from 0~3, and [High station address (HSA)] to 3.

Set HMI station number in [System Parameters] / [Model] / [HMI station no.]:

2. [Gap update factor(GUF)]:

The condition to pass a Token. In PPI network only HMI can hold a Token, PLC can only be controlled.

When the HMI that holds Token communicates with PLC for a number of times that equals to the value set here, HMI will pass the Token (control of PLC) to the next HMI. For example, if GUF is set to "1", HMI will pass the control of PLC to the next HMI when read or write the value in an address.

If GUF is set to a bigger value, the HMI that holds Token will control the PLC for a longer time and therefore the Token won't be passed to another HMI and cause failure in communicating with PLC.

A complete communication means HMI reads / writes PLC value for one time.

Note:

- HMI sta. no. can not be the same as PLC sta. no.
- Highly recommended that HMI sta. no. starts from 0 and go on sequentially for the effectiveness of operation.
- Available for EasyBuilder8000 V4.50 and later.

PLC Setting:

1. Communication Setting

Add a new program, click **File > New**, enter the **Program Title** and **File Name**, and select the correct controller type. Click **Setting** to configure the communication parameters. Click **OK** to confirm the setting. The communication with PLC starts.

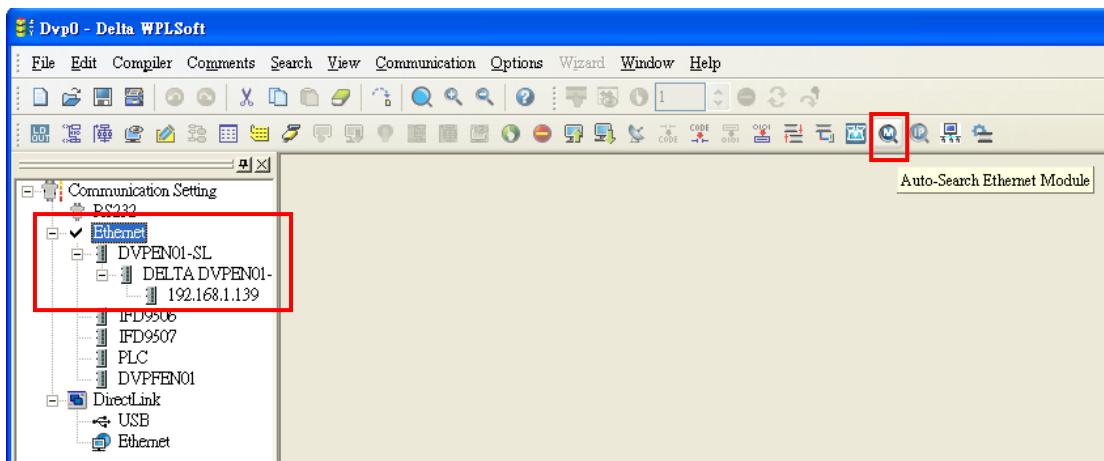

2. Transfer Setup

Click **Communication** and select **PC<=>(PLC | HPP)**, on **Transfer Setup** dialog box, select the needed parameters for upload or download, and click **OK** to start the action.

3. Auto-Search Ethernet Module

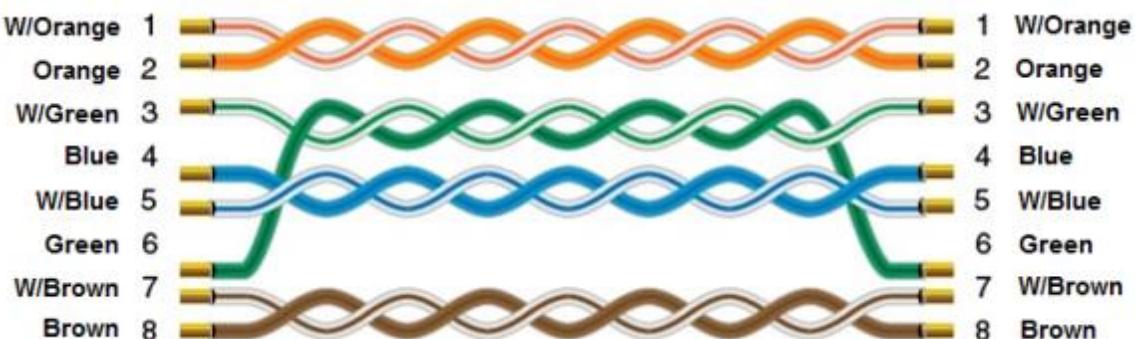

Click **Auto-Search Ethernet Module** to find the PLC modules on the same network. As shown in the following figure, DVPEN01-SL, IP address 192.168.1.139 is found.

EMERSON ControlWave (Ethernet) – Free Tag Names

Supported Series: EMERSON ControlWave MICRO

Website: <http://www2.emersonprocess.com/en-US/Pages/Home.aspx>

HMI Setting:

| Parameters | Recommended | Options | Notes |
|-----------------|---|---------|---------|
| PLC type | EMERSON ControlWave (Ethernet) – Free Tag Names | | Use UDP |
| PLC I/F | Ethernet | | |
| Port no. | 1234 | | |
| Source port no. | 1234 | | |

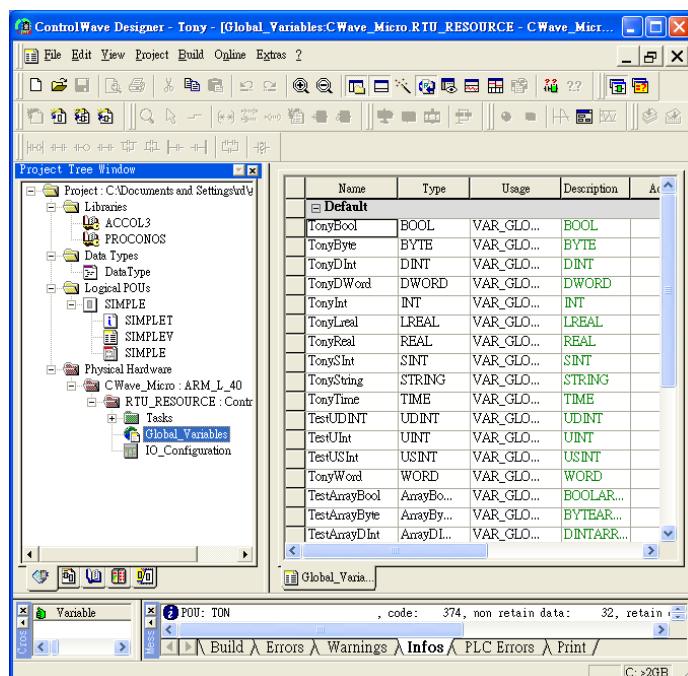

Support Device Type:

| Data type | EasyBuilder data format | Memo |
|-----------|-----------------------------------|--------|
| Bool | bit | |
| Byte | 16-bit BCD, Hex, Binary, Unsigned | 8-bit |
| SInt | 16-bit BCD, Hex, Binary, Signed | 8-bit |
| USInt | 16-bit BCD, Hex, Binary, Unsigned | 8-bit |
| Word | 16-bit BCD, Hex, Binary, Unsigned | 16-bit |
| Int | 16-bit BCD, Hex, Binary, Signed | 16-bit |
| UInt | 16-bit BCD, Hex, Binary, Unsigned | 16-bit |
| DWord | 32-bit BCD, Hex, Binary, Unsigned | 32-bit |
| DInt | 32-bit BCD, Hex, Binary, Signed | 32-bit |
| Real | 32-bit Float | 32-bit |
| UDInt | 32-bit BCD, Hex, Binary, Unsigned | 32-bit |

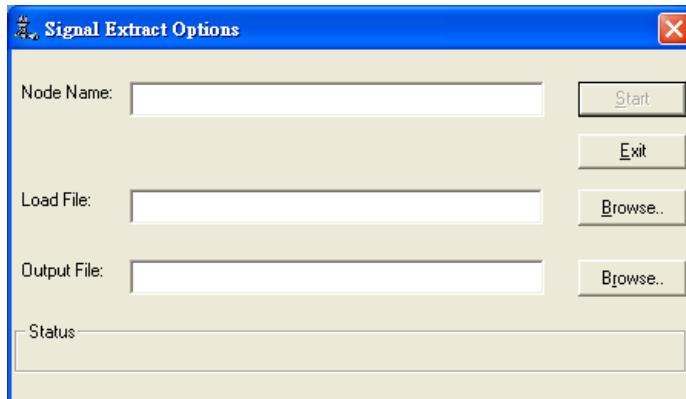

* For device types: **DWord / DINT / UDINT / Real** , error may occur if the value exceeds 7 digits (million).

PLC Setting:

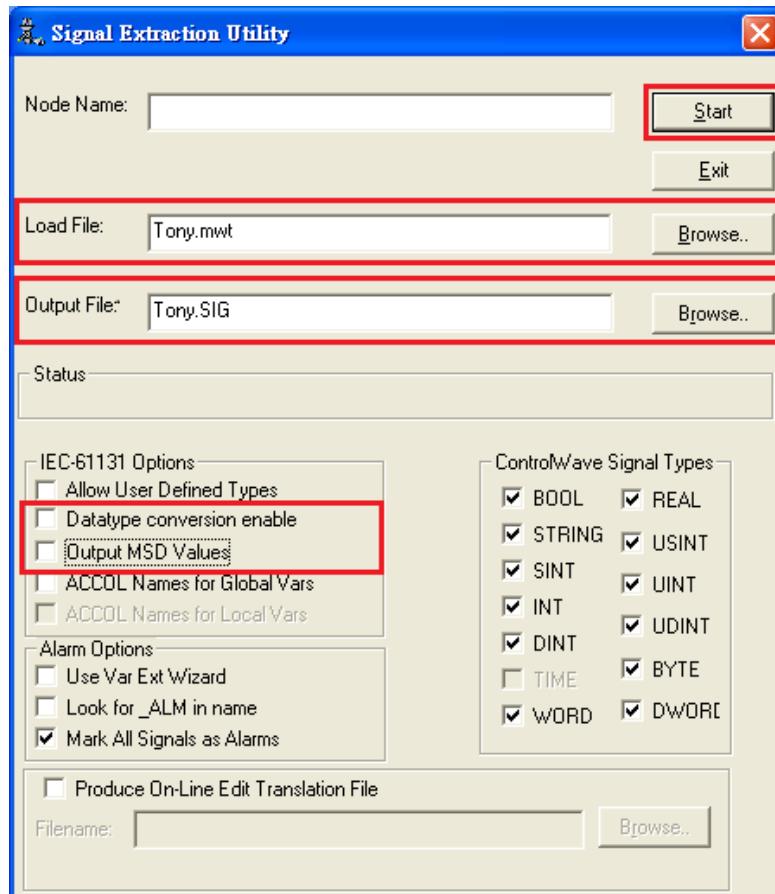

- Under **Global Variables** create the tags, a tag name with over 20 words can affect communication, please avoid it.

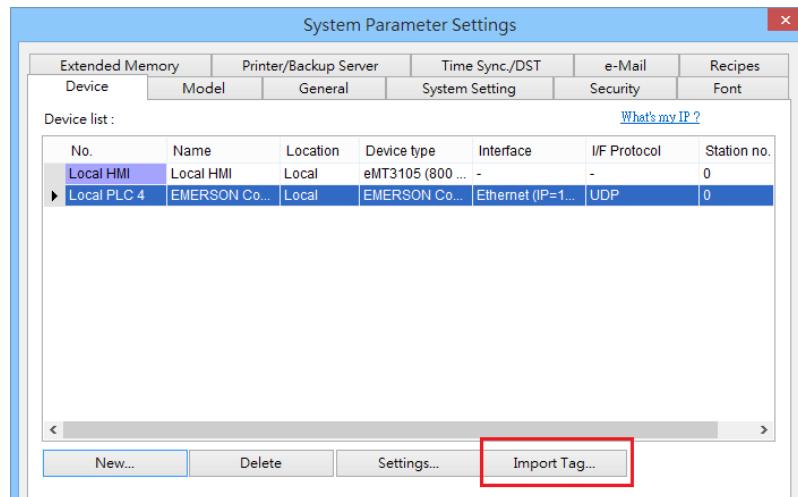

2. Open the program from **Programs -> OpenBSI Tool -> Common Tools -> Signal Extractor.**

3. Browse for the file name in **Load File** field, and then the **Output File** field will automatically generate the SIG file name. In **IEC-61131 Options** group box, deselect **Datatype conversion enable** and **Output MSD Values** check boxes, and then click **Start** to generate the file for tag import.

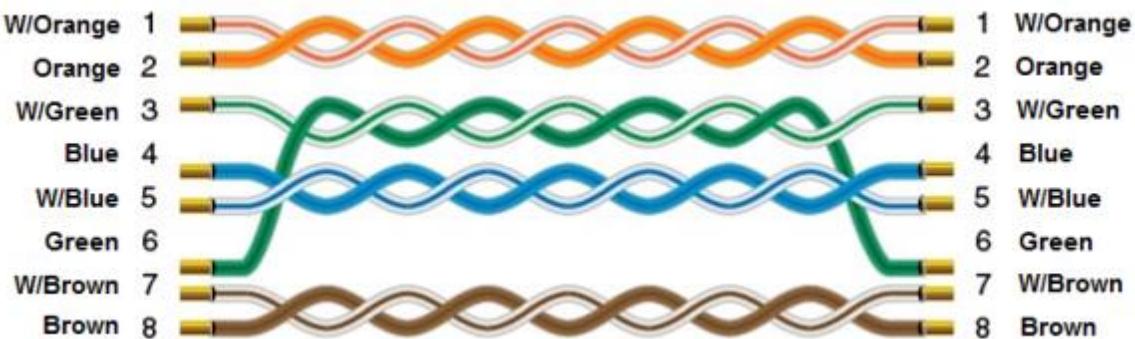

4. Import the tags after adding the driver in EasyBuilder.

IAI X-SEL CONTROLLER

Website: <http://www.iai-robot.co.jp/>

HMI Setting:

| Parameters | Recommended | Options | Notes |
|--------------|----------------------|-----------------|-------|
| PLC type | IAI X-SEL CONTROLLER | | |
| PLC I/F | RS232 | | |
| Baud rate | 9600 | 9600~19200 | |
| Data bits | 8 | 7 or 8 | |
| Parity | None | Even, Odd, None | |
| Stop bits | 1 | 1 or 2 | |
| PLC sta. no. | 0 | | |

Device Address:

| Bit/Word | Device type | Format | Range | Memo |
|----------|----------------|--------|-------|--|
| W | Servo_On_Off | H | 1 ~ 8 | Address 1~8 represent the corresponding axis. Write 1 means ON and 0 means OFF. |
| W | Servo_Origin | H | 1 ~ 8 | Address 1~8 represent the corresponding axis. Back to origin. |
| W | CurrentAxisPos | H | 1 ~ 8 | For reading current position. The state of current axis is put in RW axis*100. i.e., for the state of axis 2, 2*100=200, so it is in RW200. |
| W | RunProgram | H | 0 | Data written indicates which program to run. |
| W | EndProgram | H | 0 | Data written indicates which program to stop. |
| W | PointMove | H | 0 ~ 8 | Address 1~8 represent the corresponding axis. The data written indicates which point to reach. Put parameters ACC, DEC, SPEED in axis*100+1, axis*100+2 and axis*100+3 respectively. |
| W | JoggingMove | H | 0 ~ 8 | Jogging. Address 1~8 represent the |

| W | AbsoluteMove | H | 0 ~ 8 | Jog to the set absolute coordinate. Address 1~8 represent the corresponding axis. Put parameters ACC, DEC, SPEED and Position in axis*100+21, axis*100+22, axis*100+23 and axis*100+24 respectively. |
| W | PointChange | H | 0 ~ 8 | To change the value of the point. Address 1~8 represent the corresponding axis. Put parameters ACC, DEC, SPEED and Position in axis*100+31, axis*100+32, axis*100+33 and axis*100+34 respectively. |
| W | SoftWareReset | H | 0 | Reset soft ware. |

Application:

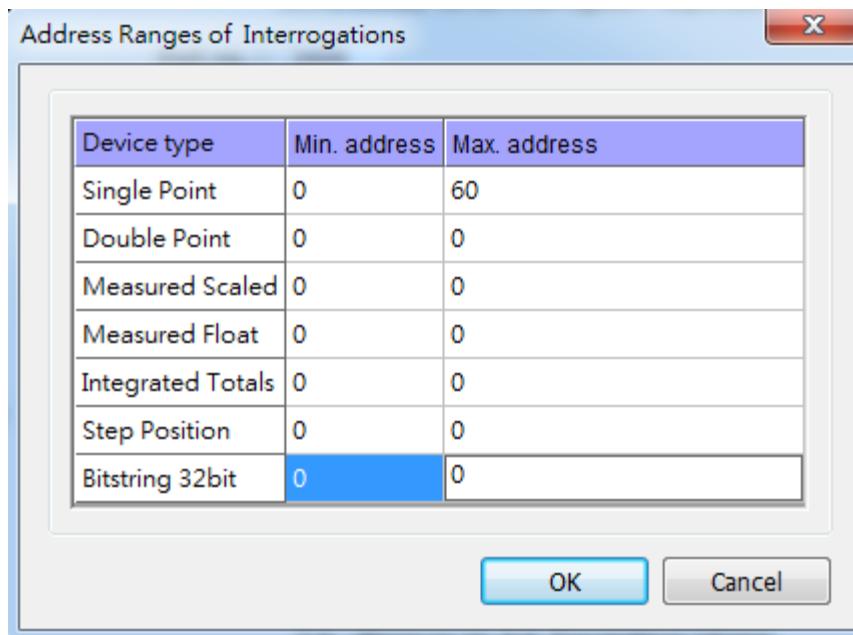

Upper computer IEC 104 Client-----HMI (IEC 104 Server) -----Modbus RTU

Periodically sends interrogation responses:

Select [Periodically sends interrogation responses] checkbox and then click [Interrogation Address Range] to set address ranges of interrogations.

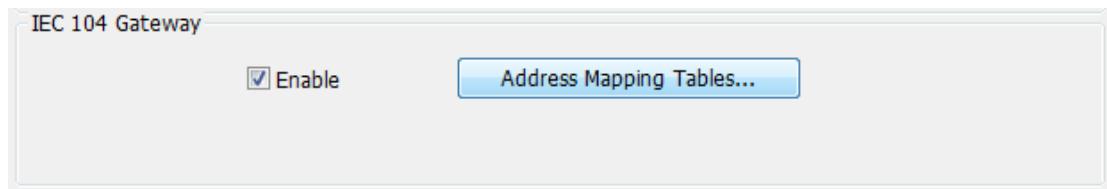

As shown below, Single Point device type in addresses range from 0 to 60 will be sent to the Client.

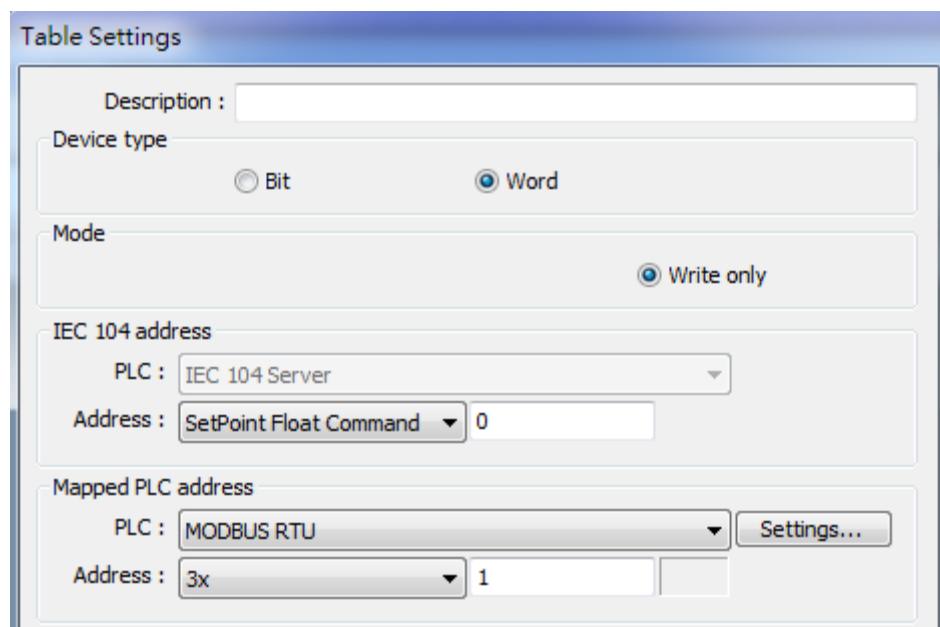

IEC104 Gateway

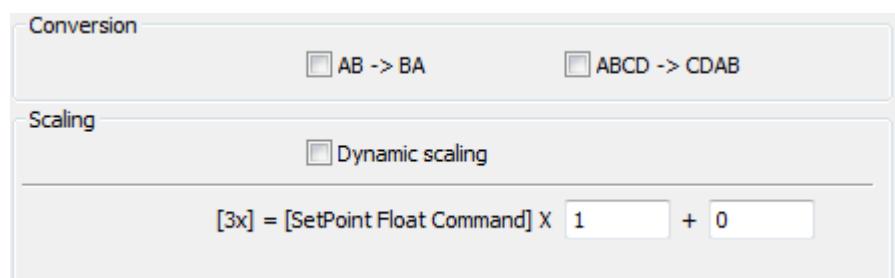

Set address mapping tables: Select [Enable] checkbox in IEC104 Gateway group box.

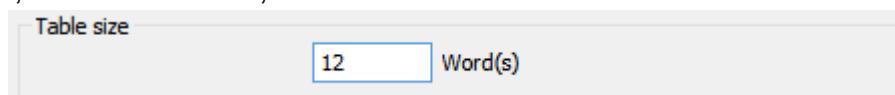

Click [Address Mapping Tables] to open Table Settings window, and map IEC 104 addresses with the ones of other devices. The applicable devices are local or Modbus PLCs.

Set scaling:

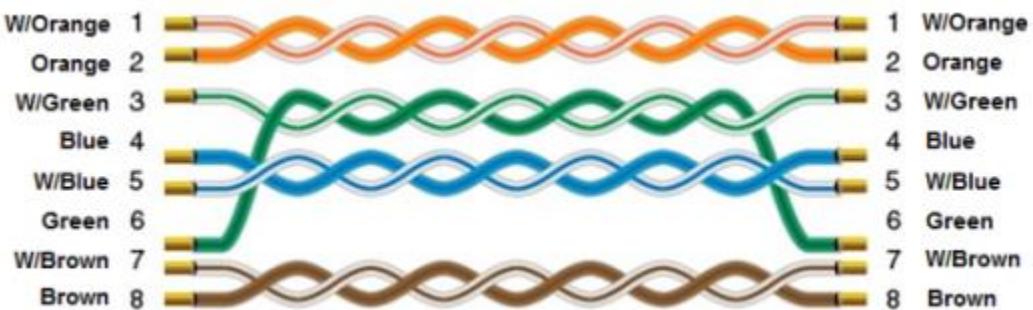

Set table size, as shown below, 12 words will be read at a time.

Import Tags:

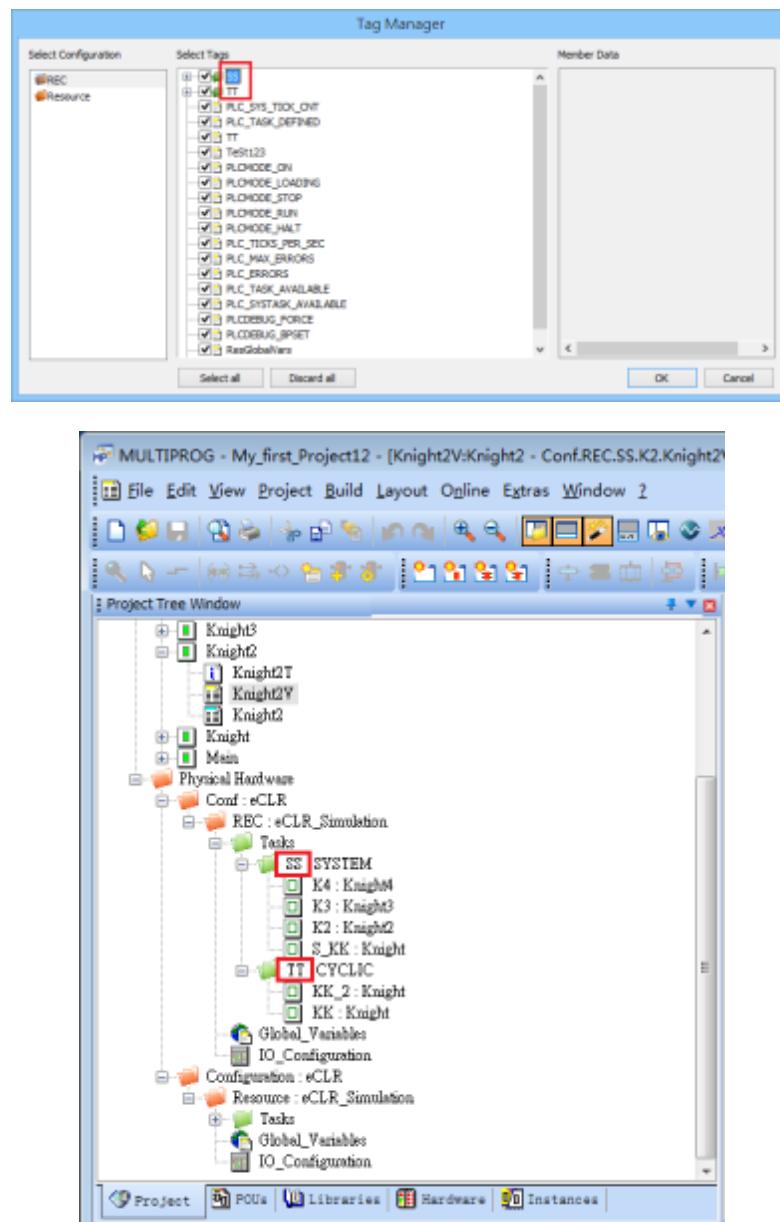

1. **Export tags:** Launch **MULTIPROG** software, select **File -> Export -> Export PLCopen xml file.**

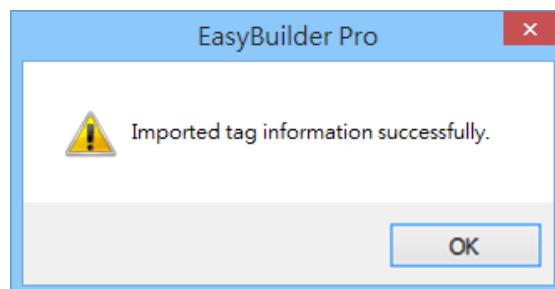

2. Launch **EasyBuilder Pro**, select **KW ProConOS** driver, set communication parameters, and then click **[Import Tags]**.

3. Select the imported .xml file, select the tags and then enter **task name** manually.
 Entering incorrect name can result in communication failure.

4. Click OK, the “Import tag information successfully.” message shows.

Memory Map

Memory Map protocol is similar to IBM 3764R communication protocol. EasyBuilder reserves 512 words of data memory to use with this protocol. EasyBuilder must update the values in these words. EasyBuilder uses these words to display data and control parts status on screen. When touch actions are taken, data is sent to the others once, and then update the memory in it. The HMI should always update the data memory.

HMI Setting:

| Parameters | Recommendation | Options | Notes |
|------------------|----------------|------------------------|---------------|
| PLC type | Memory Map | | |
| PLC I/F | RS232 | RS232, RS485 4W, 2W | RS232 default |
| Baud rate | 115200 | 9600~115200 | |
| Data bits | 8 | | |
| Parity | Even | Even, Odd, None | |
| Stop bits | 1 | | |

Device Address:

| Bit/Word | Device type | Format | Range | Memo |
|----------|-------------|--------|-----------|------|
| B | MB | DDDDh | 0 ~ 4095f | |
| W | MW | DDDD | 0 ~ 9999 | |

MB and MW share the same data storage.

MW 0 = MB 00000 ~ MB 0000f, MW 1 = MB 00010 ~ MB 0001f

| PLC sta. no. | 0 (default) | | Refer to Module Setting |

PLC Setting:

Fx3u-ENET module setting:

Before using Ethernet module, use GX Developer / FX Configurator-EN to set the Ethernet module, the FX3u-ENET module setting steps are shown below.

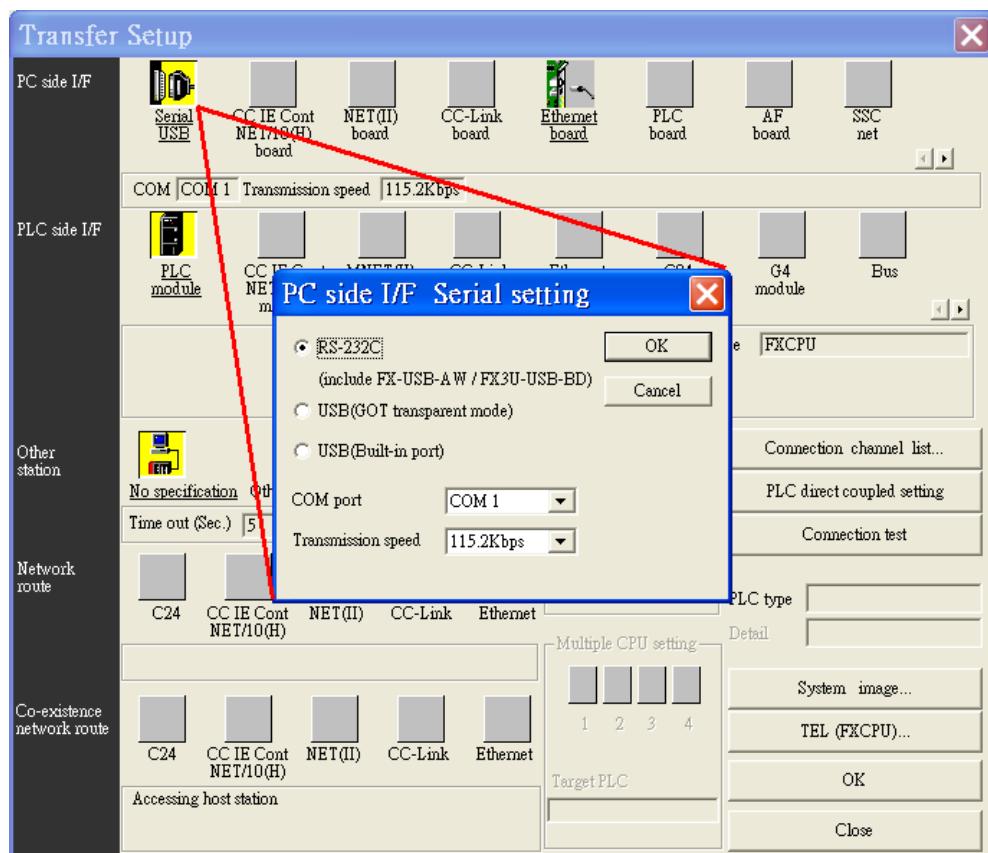

Step1. Open GX Developer, select “Read from PLC” in Online list.

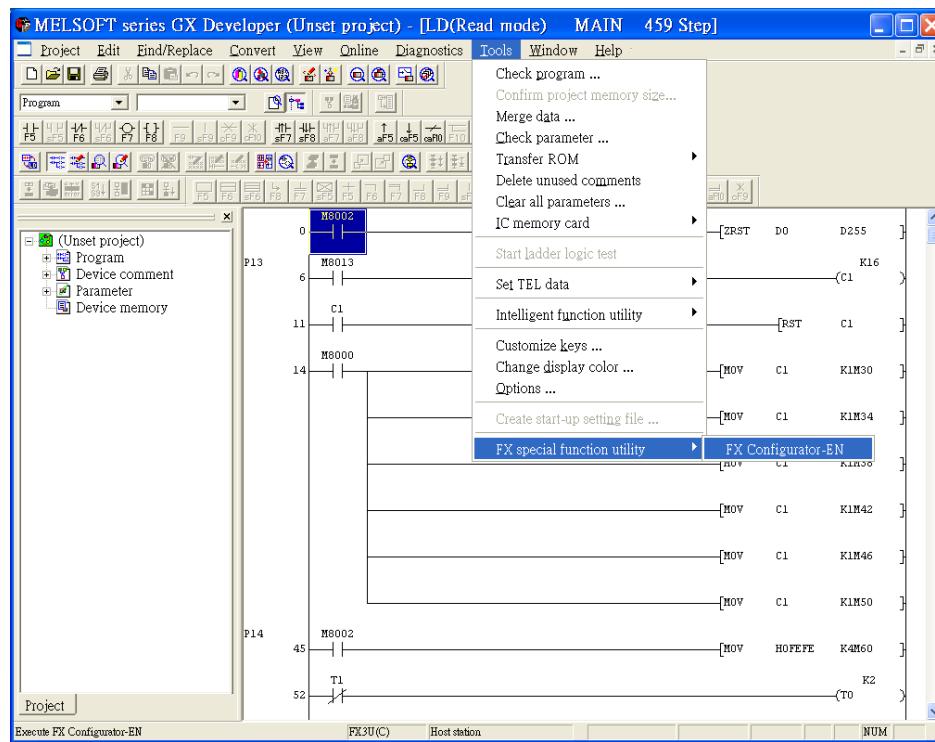

Step2. Select “FXCPU” in PLC series.

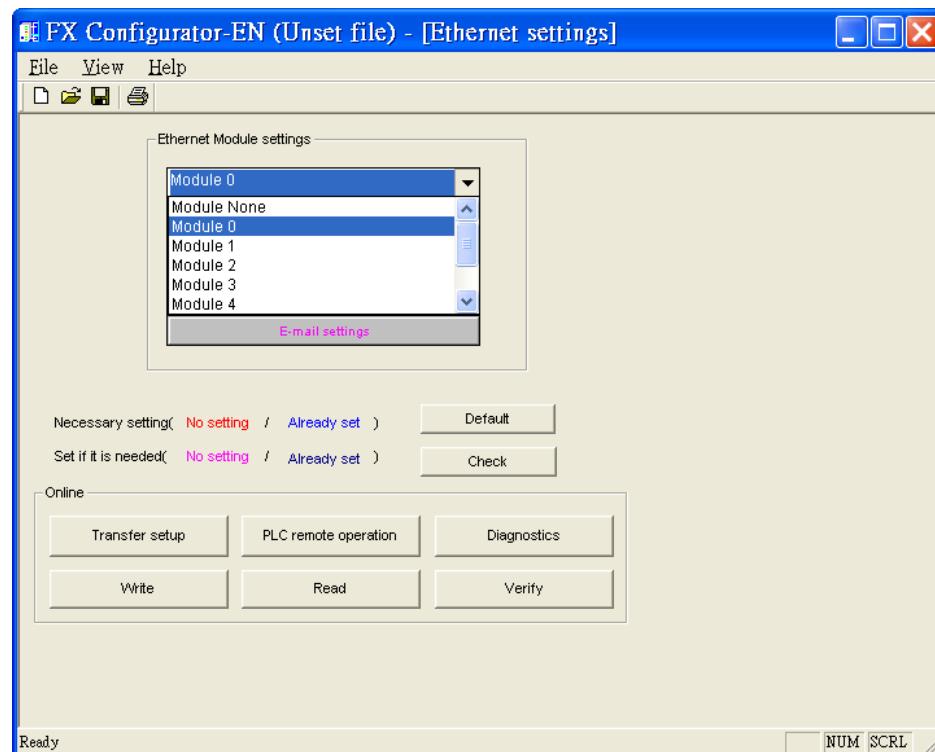

Step3. Connect PLC via serial port for setting IP address first.

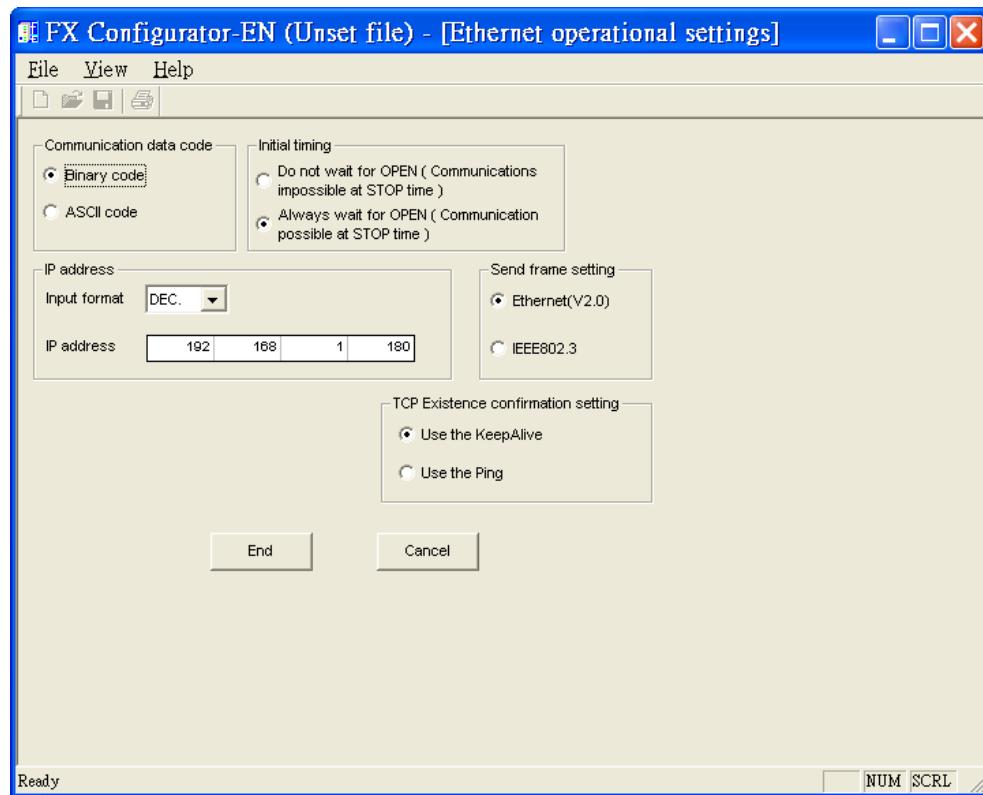

Step4. After finishing the PLC settings, select Tools/FX special function utility/FX Configurator-EN.

Step5. Select “Module 0” in Ethernet Module settings.
 (If more than one module needed, please set modules step by step)

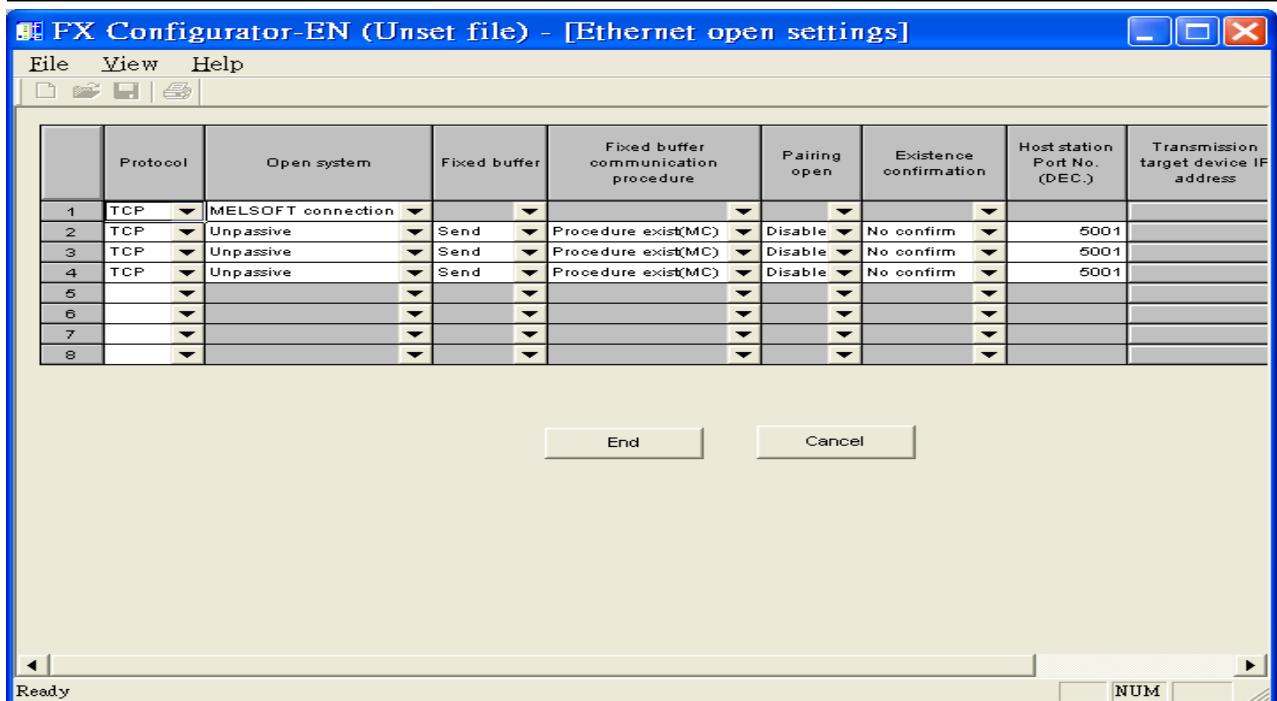

Step6. In Ethernet operational settings, select the related parameters and IP address and then press "End" to finish setting.

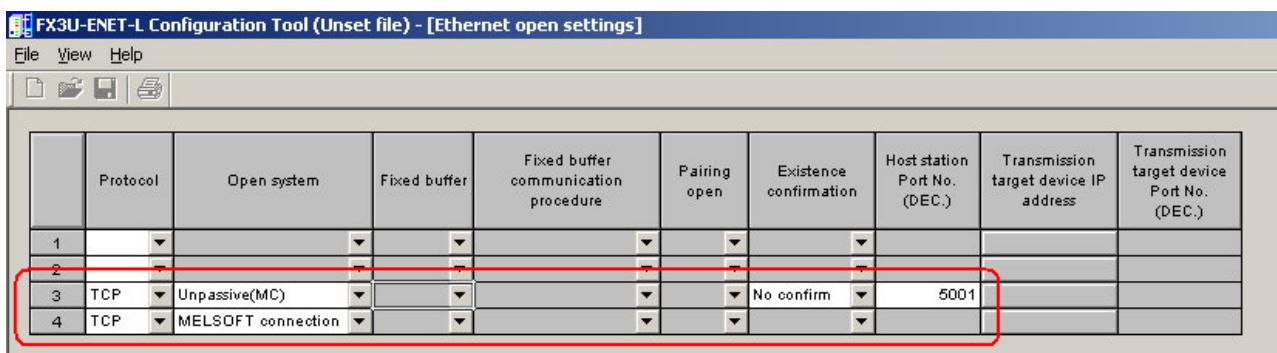

Step7. In Ethernet open settings, press "End" after setting the parameters below.

| | | | | | | | | |
|---|-----|--------------------|------|---------------------|---------|------------|--|------|
| 1 | TCP | MELSOFT connection | | | | | | |

| 4 | TCP | Unpassive | Send | Procedure exist(MC) | Disable | No confirm | | 5001 |

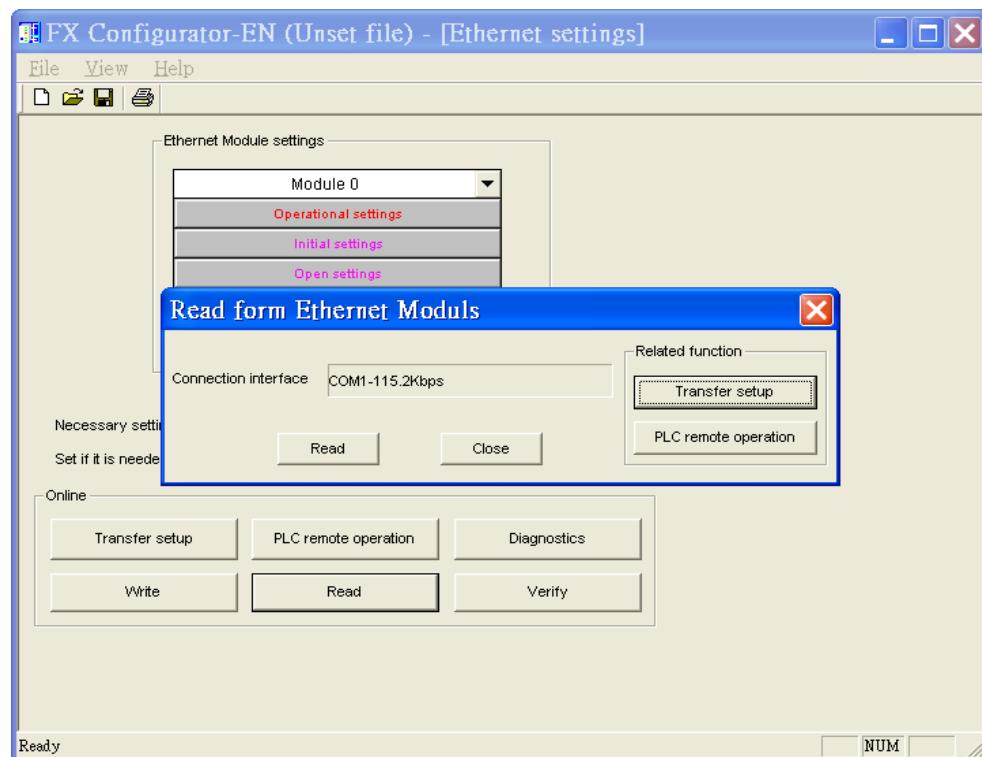

(The first Protocol means using GX Developer to communicate with module, the max. "Fixed buffer communication procedure" is 4 units.)

Or

Step8. After setting the parameters of PLC, restart for Ethernet communication.

How to use EasyBuilder8000/Easy BuilderPro to run Jog and Positioning Mode

*Jog Mode

To run Jog Mode, please follow the steps listed sequentially:

- (1) Set Jog Mode
- (2) Set rotation speed
- (3) Set acceleration
- (4) Set forward / reverse rotation direction
- (5) End

The following shows how to run the steps above using Macro in EasyBuilder8000/Easy BuilderPro.

On the editing window of EasyBuilder8000/Easy BuilderPro, the write address of "speed" is set to Local HMI LW0 (the address can be user-defined), and set "Acc" (Acceleration) to LW1.

To run Jog Mode, the communication with the device must be continuous which only allows an interval less than 0.5 seconds, otherwise the motor will be locked. Therefore, in this example, only one register PA_1 is set to read device value.

Macro Demonstration:

a. Start Macro

```
macro_command main()
short speed
short acc
short mode
mode = 1 // This represents Jog Mode.
```

```
SetData(mode, "MITSUBISHI MR J3 A", Mode, 1, 1) // Set driver mode to Jog.
```

```
GetData(speed, "Local HMI", LW, 0, 1) // Save LW0 value to speed.
```

```
SetData(speed, "MITSUBISHI MR J3 A", Speed, 0, 1) // Set motor operating speed.
```

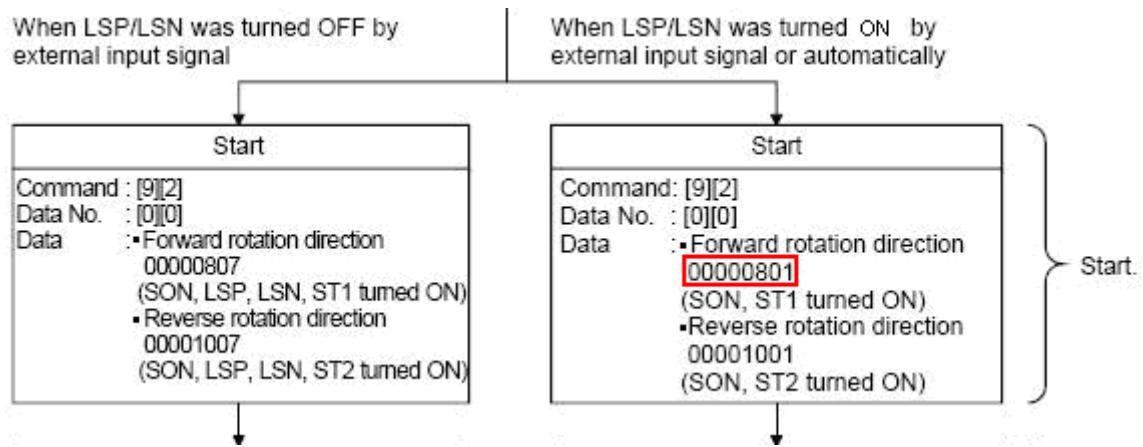

```
GetData(acc, "Local HMI", LW, 1, 1) //  
SetData(acc, "MITSUBISHI MR J3 A", Acc, 0, 1) // Set motor acceleration.
```

short motion
motion = 0x0801 // Special code, see Note 1.

```
SetData(motion, "MITSUBISHI MR J3 A", Rotation, 0, 1) // Rotate.
```

end macro_command

Note 1. Original Factory Manual:

b. End Macro

macro_command main()

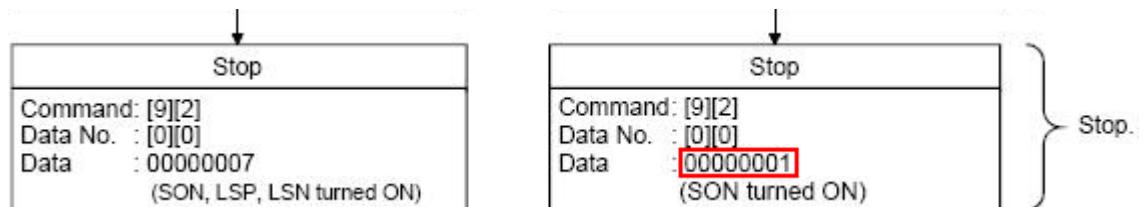

short stop

```
stop = 1 // See Note 2.
```

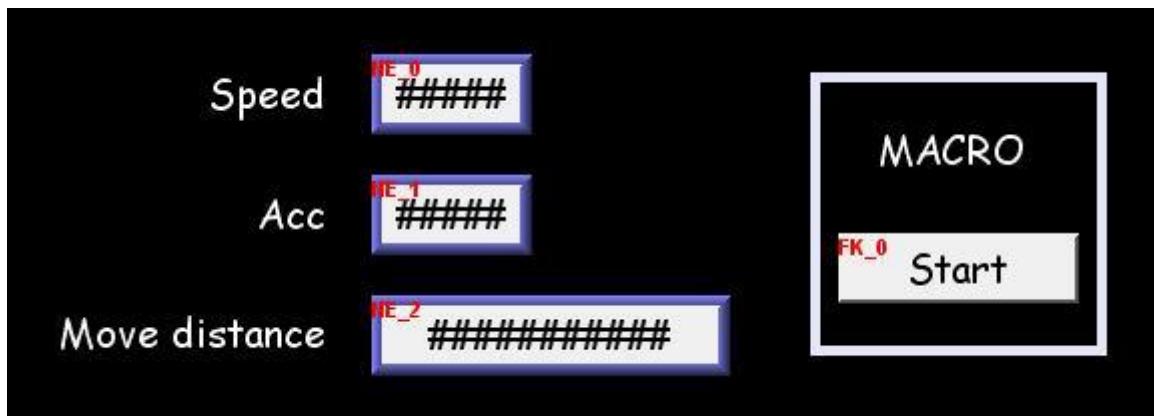

SetData(stop, "MITSUBISHI MR J3 A", End, 1, 1)

end macro_command

Note 2. Original Factory Manual:

*Positioning Mode

On the editing window of EasyBuilder8000/Easy BuilderPro, the write address of “Speed” is set to Local HMI LW2 (the address can be user-defined), and set “Acc” (Acceleration) to LW3, “Move distance” to LW4 (DW format).

Macro Demonstration:

```
macro_command main()
```

short mode

```
mode = 0x2 // Positioning Mode
SetData(mode, "MITSUBISHI MR J3 A", Mode, 1, 1)
```

short speed

```
GetData(speed, "Local HMI", LW, 2, 1)
SetData(speed, "MITSUBISHI MR J3 A", Speed, 0, 1)
```

short acc

```
GetData(acc, "Local HMI", LW, 3, 1)
SetData(acc, "MITSUBISHI MR J3 A", Acc, 0, 1)
```

short dist

```
GetData(dist, "Local HMI", LW, 4, 1)
SetData(dist, "MITSUBISHI MR J3 A", M_dist, 0, 1)
```

short rot_P

```
rot_P = 1 // Set to 0: Forward Rotation 1: Reverse Rotation
SetData(rot_P, "MITSUBISHI MR J3 A", Rot_P, 0, 1)
```

short rotat

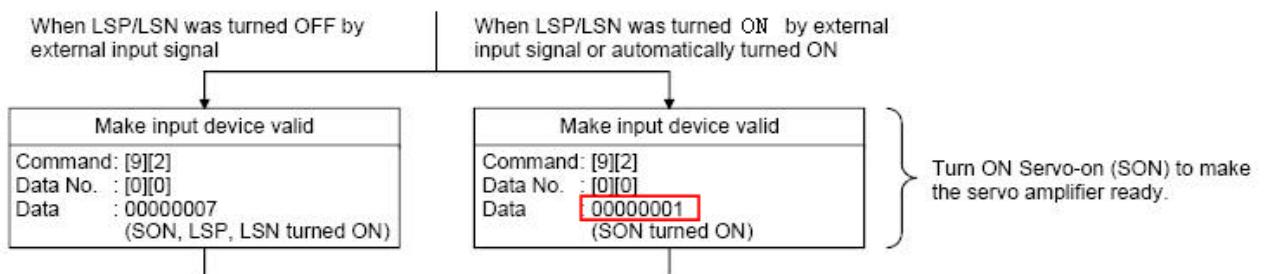

```
rotat = 1 // See Note 3.
```

SetData(rotat, "MITSUBISHI MR J3 A", Rotation, 0, 1)

SetData(rot_P, "MITSUBISHI MR J3 A", P_start, 0, 1) // Start Positioning.

end macro_command

Note:

EasyBuilder doesn't support MITSUBISHI Q02U CPU to do on-line simulation on PC.

When using Q02U driver, HMI needs 10 seconds to initiate PLC Q02U driver. Before the completion of initiation, it is recommended not to write data to PLC, this could cause "PLC no response" ; Incorrect wiring or data could cause PLC to be locked. If PLC is locked, please restart PLC or reinstall PLC module.

5. Press [END] to finish settings.

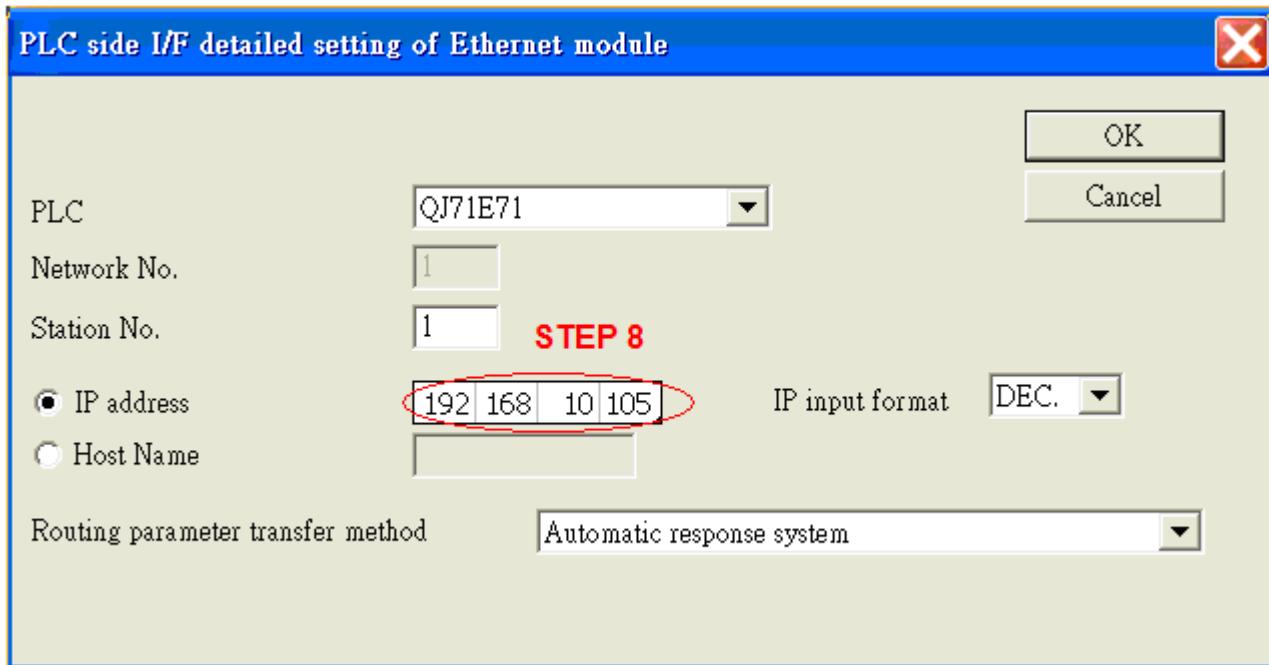

6. Restart PLC software and select [READ FROM PLC], select [QCPU(Qmode)] and press [OK].

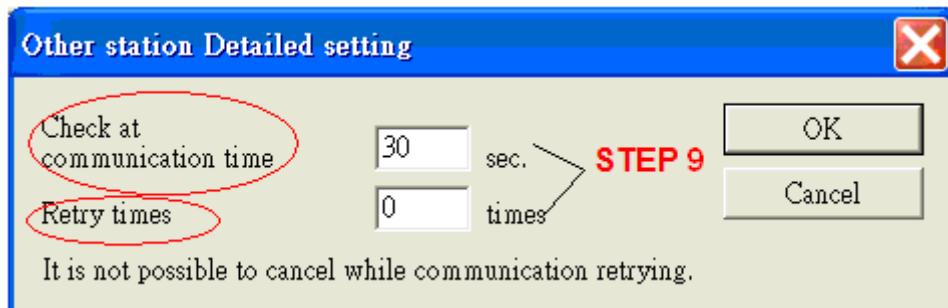

7. In [PC side I/F Ethernet board setting] set Network No. and Station No. (Station No.1 is PC Station No. not Ethernet module Station No., ranged from 2~64, the Network No. can not be the same as that of PC)

8. Select “Ethernet module” in PLC Side I/F to set QJ71E71 IP address.(IP address = Network Parameter IP address)

9. For “Other station”, click [Other station(Single network)] for setting [Check at communication time] and [Retry times].

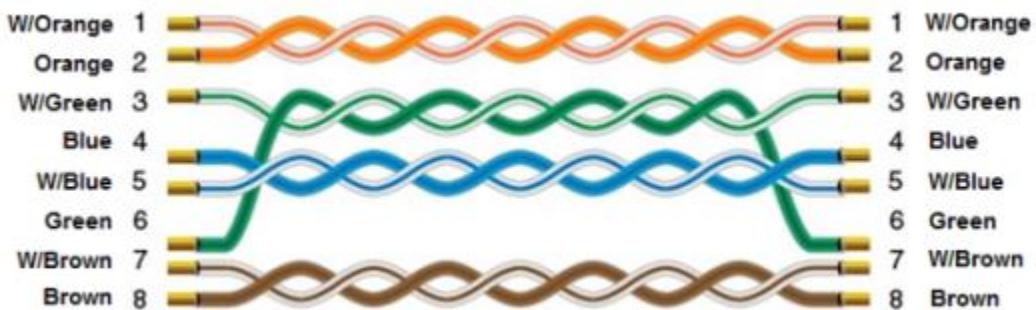

10. After finishing the settings above, click [Connection test] for testing the communication and sending the PLC program.

| W | 4x_32Bit | DDDDD | 1 ~ 65535 | Output Registerv *Note1 |
| W | 0x_single_coil | DDDDD | 1 ~ 65535 | *Note3 |

Note1: MAX1W and 4X_32Bit reads/writes 1 word for each packet and displays a 32-bit value, whereas MAX2W reads/writes 2 words for each packet.

Note2: Go the [System Parameter Settings] -> [Device Properties] and click [Conversion] to set the data format of device types 3x, 4x, 6x, 3x_double, 4x double.

Note3: Read/write a Bit at a time. Value 0 and 1 are used to represent ON or OFF status where 0 means set OFF and 1 means set ON.

Note4: The number of bits to read can be set in Macro; therefore, it is recommended to use 0x address type for functions such as GetData() and SetData(), in order to increase reading speed.

To read/write multiple 0x address type in macro, use 0x_multi_coils to increase write speed.

Note5: Please assign all the addresses to Even addresses, or all to Odd addresses, in order to prevent communication failure.

NOTE:

Address type “5x” is mapped to Holding Register. The communication protocol of 5x is almost the same as “4x” except that “5x” swaps double word.

If 4x contains the following information:

| Address | 1 | 2 | 3 | 4 | 5 | 6 | ... |
|--------------|--------|-----|--------|-----|--------|-----|-----|
| Data in word | 0x1 | 0x2 | 0x3 | 0x4 | 0x5 | 0x6 | |
| Data | 0x0201 | | 0x0403 | | 0x0605 | | |

For 5x, it will be:

| Address | 1 | 2 | 3 | 4 | 5 | 6 | ... |
|--------------|--------|-----|--------|-----|--------|-----|-----|
| Data in word | 0x1 | 0x2 | 0x3 | 0x4 | 0x5 | 0x6 | |
| Data | 0x0102 | | 0x0304 | | 0x0506 | | |

Modbus RTU function code:

| | |
|-------------------------------|-------------------------------|
| 0x 0x01 Read coil | 0x05 write single coil |
| 0x_multi_coils 0x01 Read coil | 0x0f write multiple coils |
| 1x 0x02 Read discrete input | N/A for write operation |
| 3x 0x04 Read input register | N/A for write operation |
| 4x 0x03 Read holding register | 0x10 write multiple registers |
| 5x 0x03 Read holding register | 0x10 write multiple registers |

(Note: reverse word order in double word format)

3xbit is equivalent to 3x

4xbit is equivalent to 4x

| | |
|-------------------------------|----------------------------|
| 6x 0x03 Read holding register | 0x06 write single register |
|-------------------------------|----------------------------|

(Note: 6x is limited to device of one word only)

|----|----------------------------|----------------------------|
| 6x | 0x03 Read holding register | 0x06 Write single register |
|----|----------------------------|----------------------------|

(Note: 6x is limited to device of one word only)

Setting Instructions:

1. Go to [System Parameter Settings]  , click [New] to add a new device -Modbus RTU (0x 1x range adjustable) , as shown below:

2. After adding Modbus RTU (0x 1x Range Adjustable) driver, [Add Address Range Limit] button will be enabled as below. Users can set maximum read/write command size here.

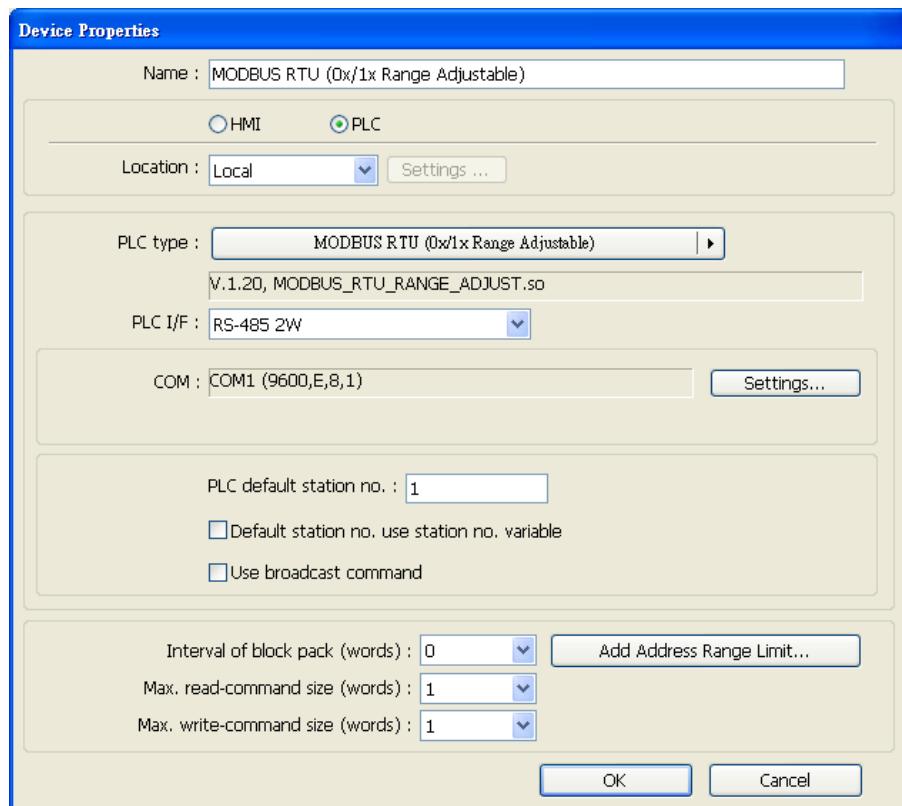

- Max.read-command size (words): Pull down to select PLC reading range.

Max. read-command size (words) : 

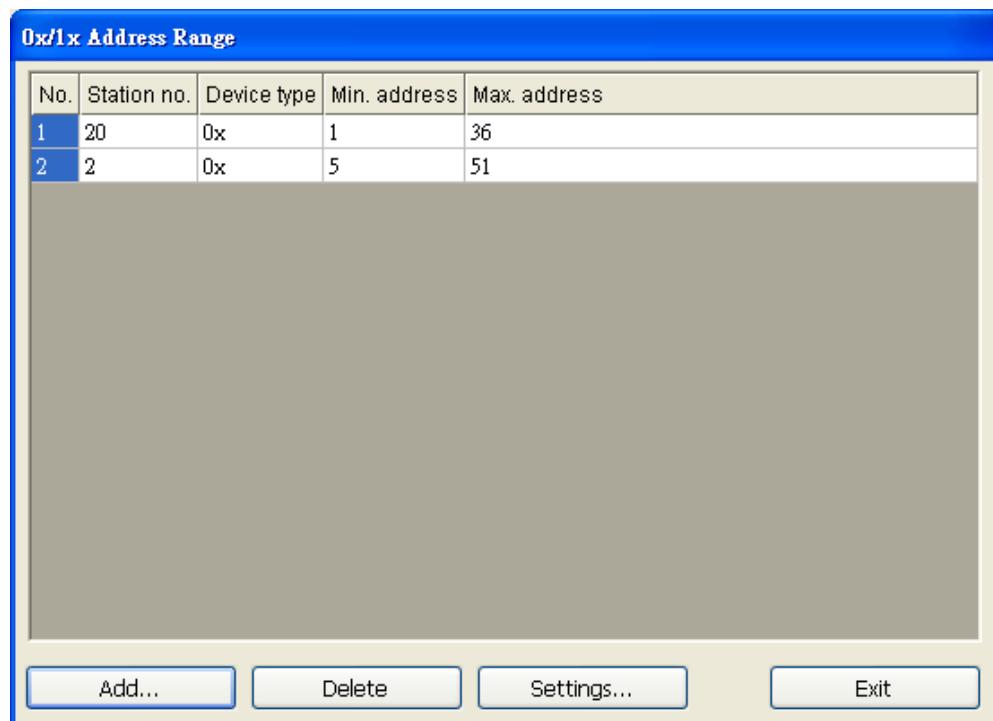

- Max.write-command size (words): Pull down to select PLC writing range.

Max. write-command size (words) : 

Note: Setting [Add Address Range Limit] is enabled only when bit address is not a multiple of 16bit.

- Click [Add Address Range Limit] button, Users can define 0x , 1x and 0x_multi_coils address range in [0x 1x Address Range] dialog box, referring to bit range of the device used.

Add : Set [Station No.], [Device Type], [Min. Address], [Max. Address] then click [OK] to finish adding as below:

Delete : The selected items will be deleted.

Settings : Set [Station No.], [Device Type], [Min. Address], [Max. Address] then click [OK] to finish adding as below:

Example :

Take D2 and D8 of SCON as example, the settings depend on bit range of different PLC types. Set [Station No.] and address first.

For D2, set [Station No.] to **20**, [Device Type] **0x**, [Max. Address] **36**.

For D8, set [Station No.] to **2**, [Device Type] **0x**, [Max. Address] **51**.

| 0x/1x Address Range | | | | |
|---------------------|-------------|-------------|--------------|--------------|
| No. | Station no. | Device type | Min. address | Max. address |
| 1 | 20 | 0x | 1 | 36 |
| 2 | 2 | 0x | 5 | 51 |

[Add...](#) [Delete...](#) [Settings...](#) [Exit](#)

Note: If communicating with a RS-485 2W PLC, the [Turn around delay] setting may need to be adjusted according to the reply speed of the device. Please click [Settings] in [Device Properties], and set the [Turn around delay (ms)] parameter as shown:

After completing all settings above, the communication is enabled.

| DW | 5x (32-bit) | DDDDD | 1 ~ 65535 | 4x double word |
| W | 6x | DDDDD | 1 ~ 65535 | 4x single word write |

*Note1: Please assign all the addresses to Even addresses, or all to Odd addresses, in order to prevent communication failure.

NOTE:

Address type “5x” is mapping to Hold Reg. The communication protocol of “5x” is almost the same as “4x” except that “5x” swaps double words.

If 4x contains the following information:

| | | | | | | | |
|--------------|--------|-----|--------|-----|--------|-----|-----|
| Address | 1 | 2 | 3 | 4 | 5 | 6 | ... |

| Data | 0x0201 | | 0x0403 | | 0x0605 | | |

For 5x, it will be:

| | | | | | | | |
|--------------|--------|-----|--------|-----|--------|-----|-----|
| Address | 1 | 2 | 3 | 4 | 5 | 6 | ... |
| Data in word | 0x1 | 0x2 | 0x3 | 0x4 | 0x5 | 0x6 | |
| Data | 0x0102 | | 0x0304 | | 0x0506 | | |

Modbus RTU function code:

| | | |
|----------------|----------------------------|-------------------------------|
| 0x | 0x01 Read coil | 0x05 Write single coil |
| 0x_multi_coils | 0x01 Read coil | 0x0f Write multiple coils |
| 1x | 0x02 Read discrete input | N/A for writing operation |
| 3x | 0x04 Read input register | N/A for writing operation |
| 4x | 0x03 Read holding register | 0x10 Write multiple registers |
| 5x | 0x03 Read holding register | 0x10 Write multiple registers |

(Note: reverse word order in double words format)

3xbit is equivalent to 3x

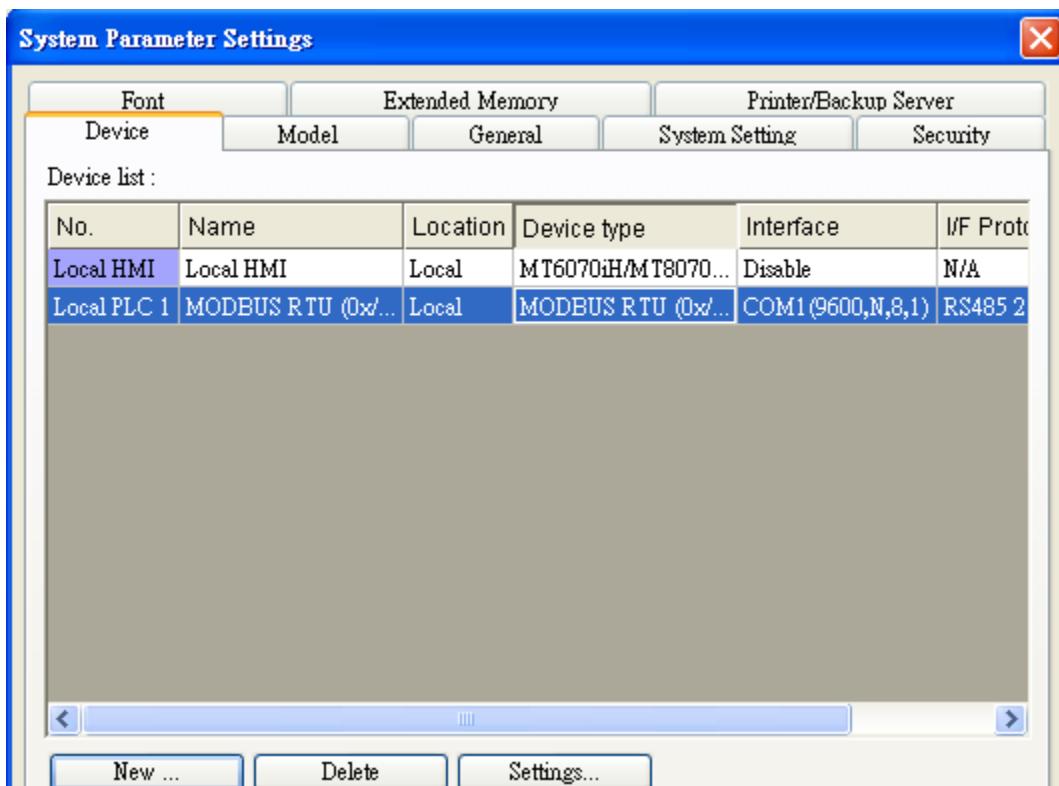

4xbit is equivalent to 4x

| | | |
|----|----------------------------|----------------------------|
| 6x | 0x03 Read holding register | 0x06 Write single register |
|----|----------------------------|----------------------------|

(Note: 6x is limited to device of one word only)

Setting Instructions:

1. Go to [System Parameter Settings]  , click [New] to add a new device - MODBUS RTU (Adjustable) , as shown below:

2. After adding MODBUS RTU (Adjustable) driver, [Add Address Range Limit] button will be enabled as below. Users can set maximum read/write command size here.

- Max.read-command size (words): Pull down to select PLC reading range.

Max. read-command size (words) : 

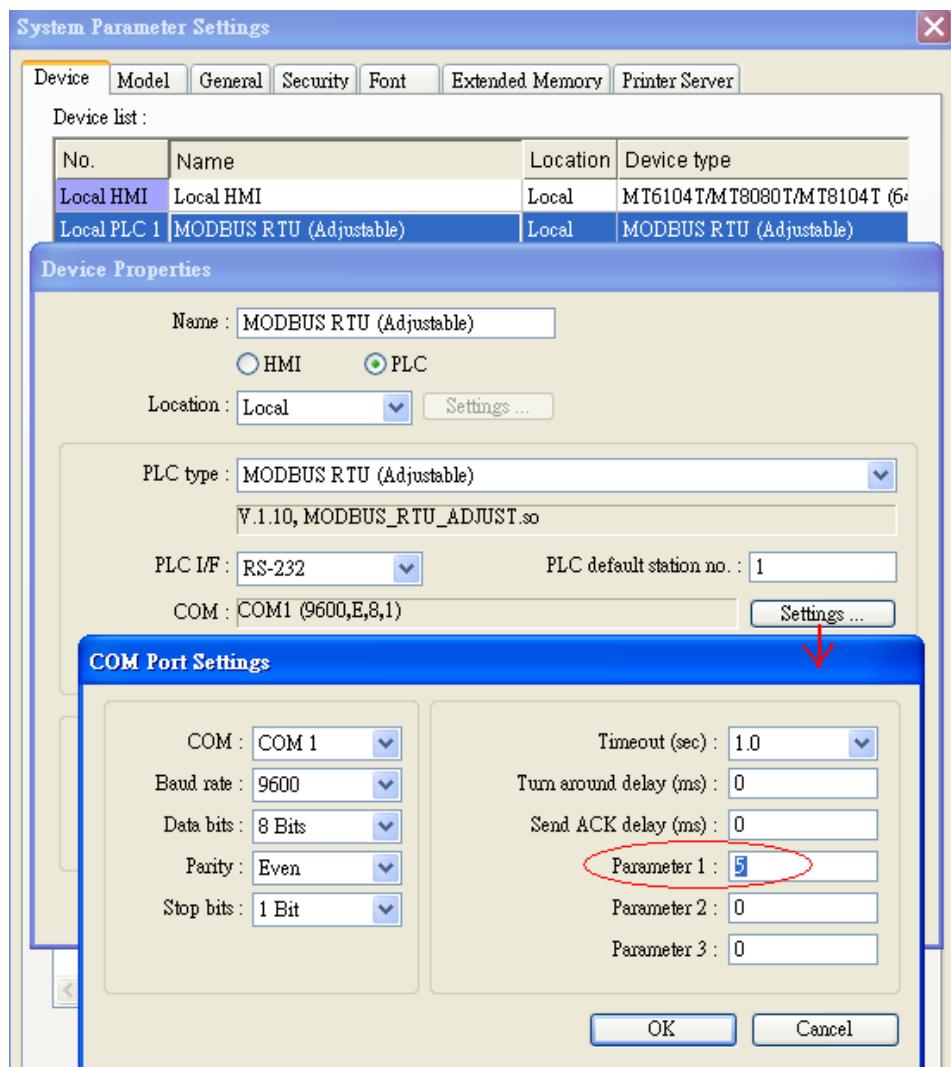

- Max.write-command size (words): Pull down to select PLC writing range.

Max. write-command size (words) : 

Note:

MODBUS RTU (adjustable) usage

Users can decide the address range via setting value on Parameter 1. For example, when users set 5 to Parameter 1, the address range will be 5 ~ 65535.

MODBUS Server (COM/Ethernet)

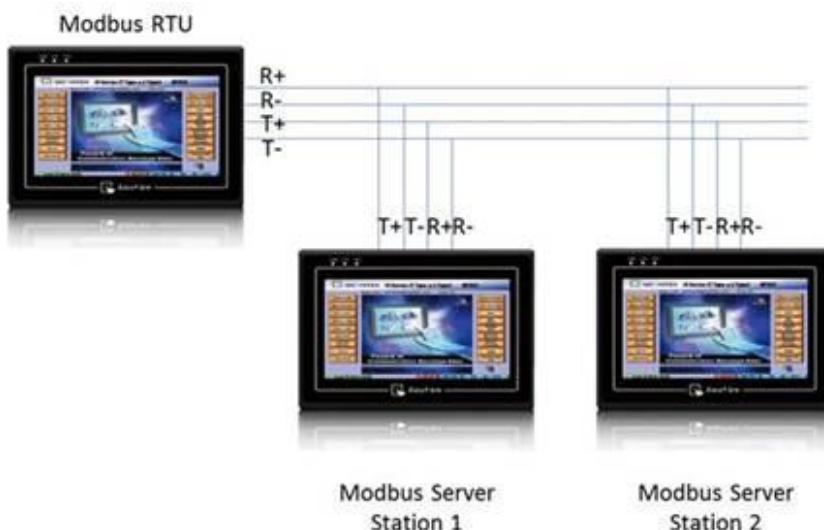

HMI Setting:

| Parameters | Recommended | Options | Notes |
|---------------------|------------------------------|-------------------------|--|
| PLC type | MODBUS Server (COM/Ethernet) | | |
| PLC I/F | RS232 | RS232, RS485 | |
| Baud rate | 9600 | 9600~115200 Ethernet | Ethernet supports UDP or TCP/IP protocol |
| Data bits | 8 | 8 | |
| Parity | Even | Even, Odd, | |
| Stop bits | 1 | 1 | |
| PLC sta. no. | 1 | 1-31 | HMI Modbus Station No. |
| Port no. | | 502 | |

| | | | |
|--------------------------|-----|----------------------------|----|
| Online simulator | YES | Extend address mode | NO |
| Broadcast command | NO | | |

If HMI is Modbus Server, connecting two or more Modbus Servers with one Modbus RTU via RS485 4W is not supported. To do so, use RS485 2W instead.

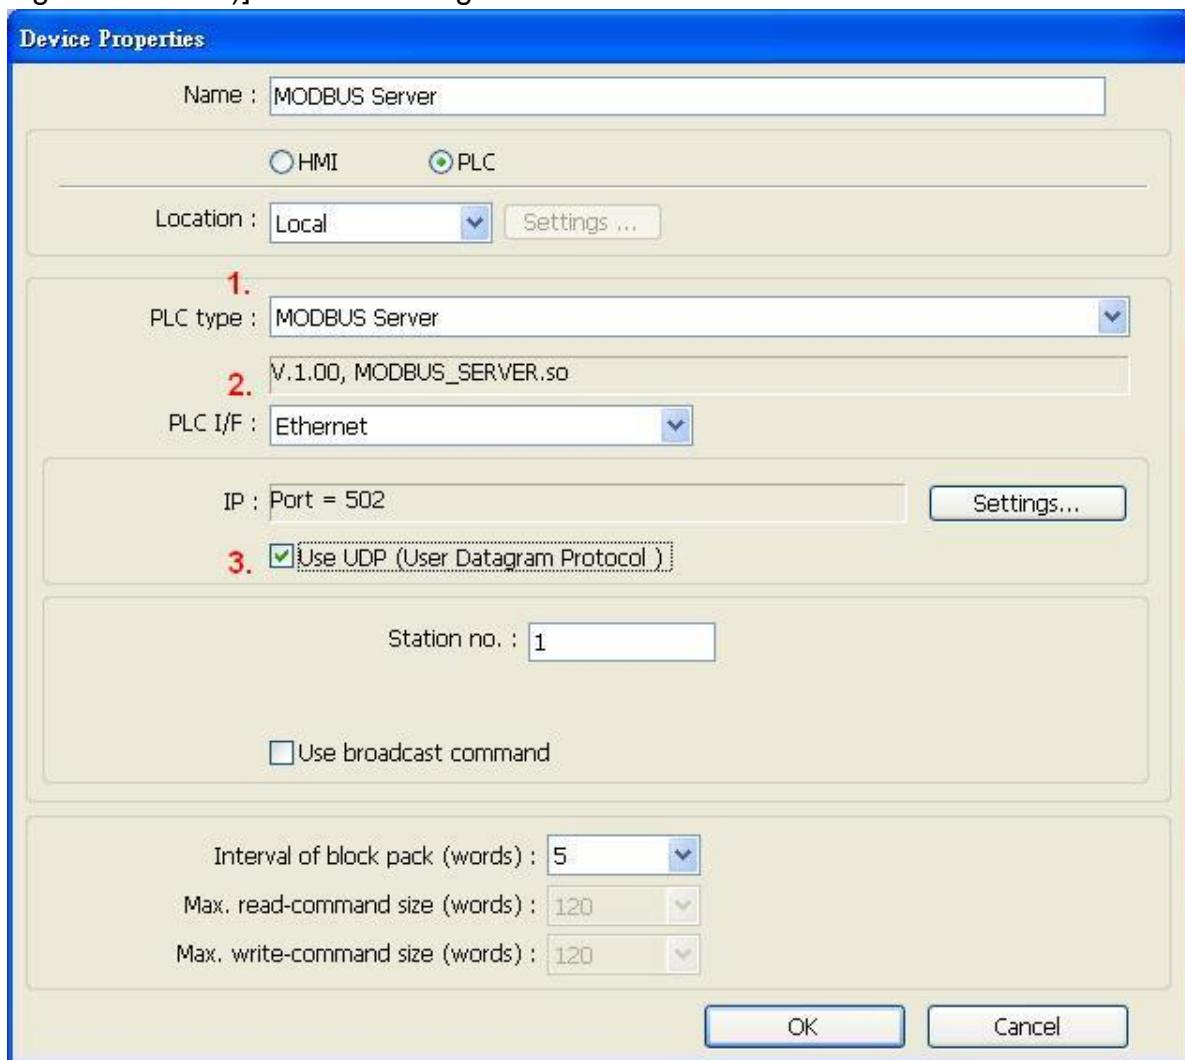

PLC Setting:

Communication mode

Modbus RTU protocol

Modbus Server UDP Protocol Setting:

MODBUS Server (Ethernet) supports UDP communication protocol. To use UDP mode, go to [System Parameter Settings] in editing software, in [Device list] click [New], for [PLC type] select “Modbus Server”, [PLC I/F] set to [Ethernet], and select [Use UDP (User Datagram Protocol)] to finish setting.

Modbus Server Port No. can be changed by clicking [Settings].

Modbus Server Port No. can not be set identically to HMI Port No. When doing so, the warning message below will be shown requesting users to change setting.

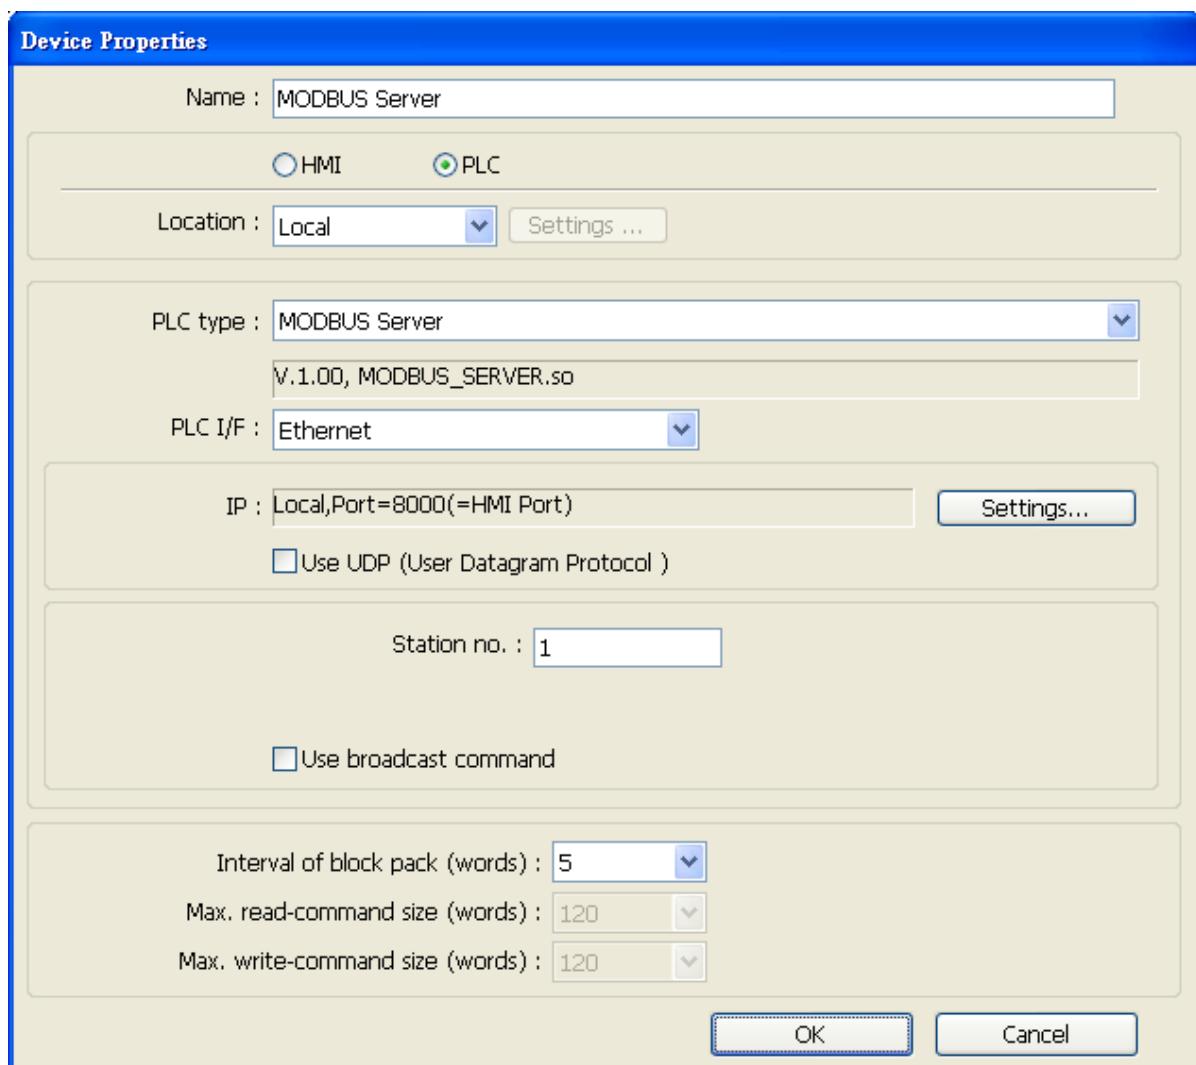

Note:

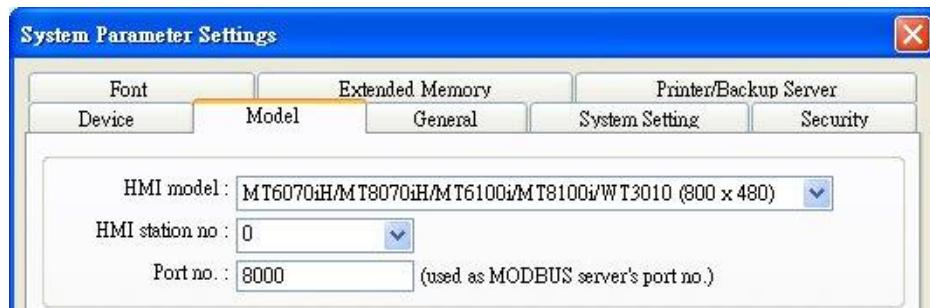

A maximum of 64 Clients can be connected simultaneously.
Modbus Server Port No. can't be identical to HMI Port No.

Modbus Server TCP/IP Protocol Setting:

MODBUS Server (Ethernet) supports TCP/IP communication protocol. Go to [System Parameter Settings] in editing software, in [Device list] click [New], for [PLC type] select "Modbus Server", [PLC I/F] set to [Ethernet] to finish setting.

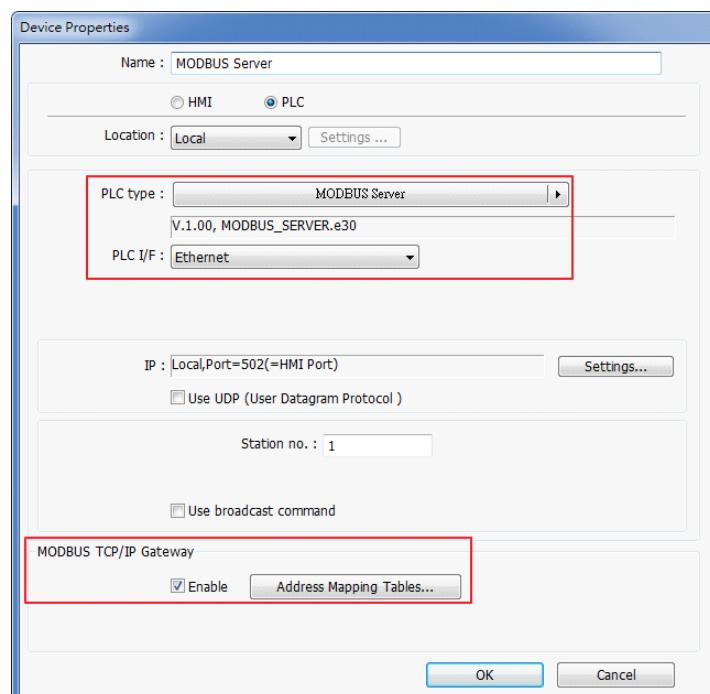

For Modbus Server TCP/IP, HMI Port No. is the same as Modbus Server Port No. To change Prot No. go to [System Parameter Settings] / [Model], the default Port No. is "8000", and it is allowed to change Modbus Server Port No. here.

MODBUS TCP/IP Gateway:

By adding MODBUS Server with [Ethernet] interface, the [MODBUS TCP/IP Gateway] feature can be enabled by selecting the [Enable] check box.

Note the following two points when enabling the [MODBUS TCP/IP Gateway]:

- The original mapping between the MODBUS Server and the HMI address will be canceled.
- The SCADA cannot read from or write in the addresses defined in different Address Mapping Table at one time.

For more information about this, see "Chapter37 MODBUS TCPIP Gateway".

| Address Mapping Table | | | | | | | |
|-----------------------|-------------|----------------|------|-----------|--------------------|---------------|------------|
| Table | Description | MODBUS Address | | PLC Name | Mapped PLC Address | Table Size | ReadWrite |
| 1 | 0x <==> LB | 0x-1 | <==> | Local HMI | LB-0 | 12096 Bit(s) | Read/Write |
| 2 | 1x <==> LB | 1x-1 | <==> | Local HMI | LB-0 | 12096 Bit(s) | Read only |

| 3x | 0x04 Read input register | N/A for write operation |
| 4x | 0x03 Read holding register | 0x10 write multiple registers |

Modbus Server Error Code:

| Error Code | Definition | Condition |
|------------|-------------------------|---|
| 01 | Incorrect function code | The function code is not supported. |
| 02 | Incorrect read address | The read address is not within the range. |
| 03 | Incorrect data | The data read is incorrect, for example, the data length is 0. |
| 251 | Incorrect data | Read/Write exceeding number of words from/to the register of the Modbus device. |
| 252 | Incorrect data | Modbus device replies incorrect data format. |
| 253 | Incorrect data | Modbus device checksum error. |

| W | 6x | DDDDD | 1 ~ 65535 | 4x single word write |
| W | 4x string central europe rev | DDDDD | 1 ~ 65535 | |

NOTE:

Address type “5x” is mapping to Hold Reg. The communication protocol of “5x” is almost the same as “4x” except that “5x” swaps double words.

If 4x contains the following information:

| | | | | | | | |
|--------------|--------|-----|--------|-----|--------|-----|-----|
| Address | 1 | 2 | 3 | 4 | 5 | 6 | ... |
| Data in word | 0x1 | 0x2 | 0x3 | 0x4 | 0x5 | 0x6 | |
| Data | 0x0201 | | 0x0403 | | 0x0605 | | |

For 5x, it will be:

| | | | | | | | |
|--------------|--------|-----|--------|-----|--------|-----|-----|
| Address | 1 | 2 | 3 | 4 | 5 | 6 | ... |
| Data in word | 0x1 | 0x2 | 0x3 | 0x4 | 0x5 | 0x6 | |
| Data | 0x0102 | | 0x0304 | | 0x0506 | | |

Modbus RTU function code:

| | | |
|----------------|----------------------------|-------------------------------|
| 0x | 0x01 Read coil | 0x05 Write single coil |
| 0x_multi_coils | 0x01 Read coil | 0x0f Write multiple coils |
| 1x | 0x02 Read discrete input | N/A for writing operation |
| 3x | 0x04 Read input register | N/A for writing operation |
| 4x | 0x03 Read holding register | 0x10 Write multiple registers |
| 5x | 0x03 Read holding register | 0x10 Write multiple registers |

(Note: reverse word order in double words format)

3xbit is equivalent to 3x

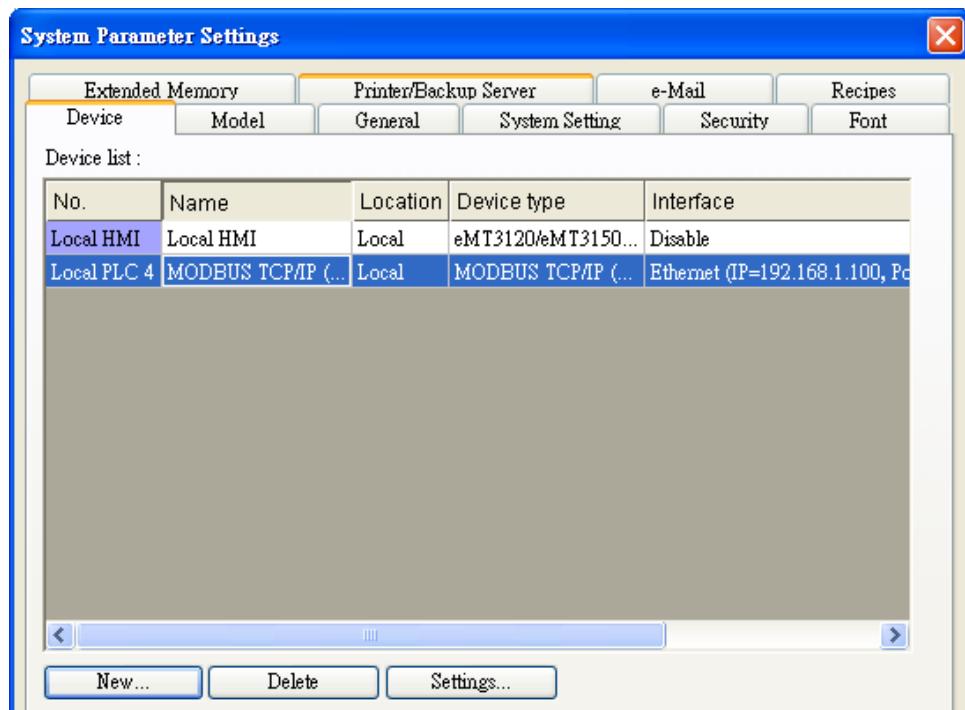

4xbit is equivalent to 4x

| | | |
|----|----------------------------|----------------------------|
| 6x | 0x03 Read holding register | 0x06 Write single register |
|----|----------------------------|----------------------------|

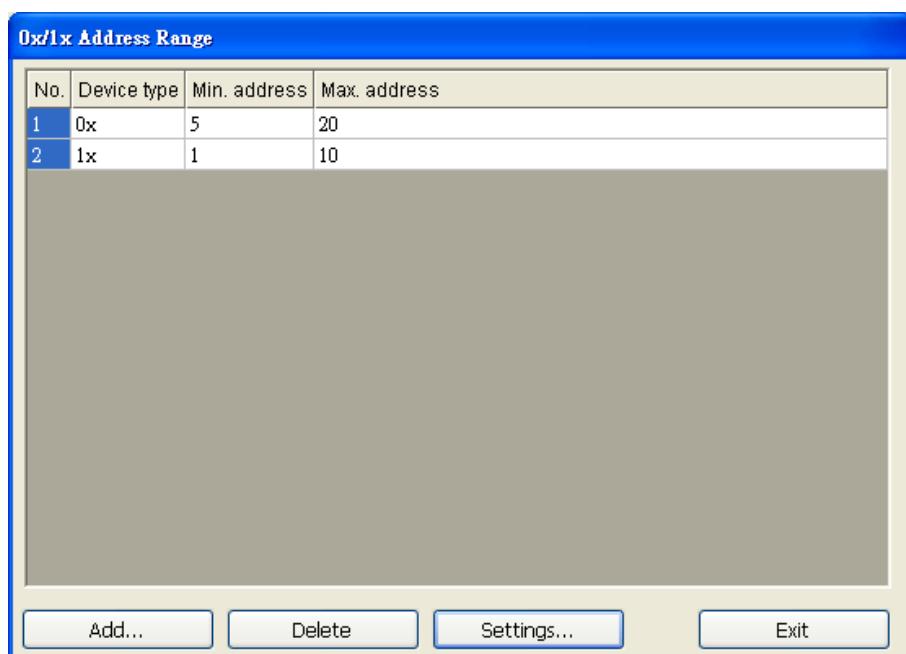

(Note: 6x is limited to device of one word only)

Setting Instructions:

1. Go to [System Parameter Settings]  , click [New] to add a new device -MODBUS TCP/IP (0x/1x Range Adjustable) , as shown below:

2. Click [Add Address Range Limit] button, Users can define 0x and 1x address range in [0x 1x Address Range] dialog box, referring to bit range of the device used.

Add : Set [Station No.], [Device Type], [Max. Address] then click [OK] to finish adding as below:

Delete : The selected items will be deleted.

Settings : Set [Station No.], [Device Type], [Max. Address] then click [OK] to finish adding as below:

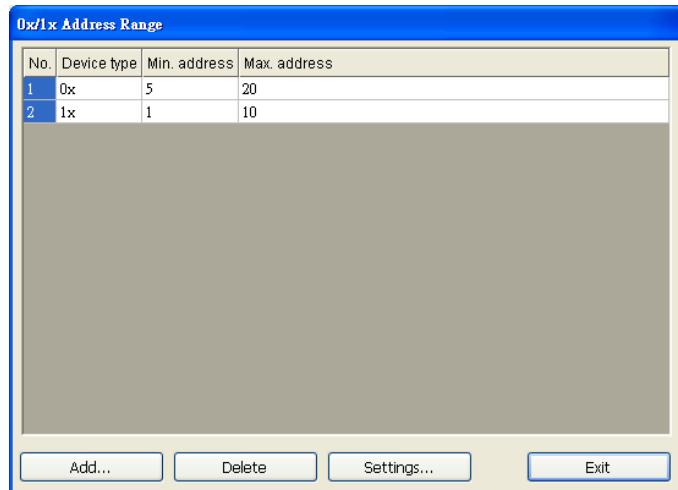

Example :

Take 0x and 1x as example, the settings depend on bit range of different PLC types.

For 0x, [Device Type] **0x**, [Min. Address]**5**,[Max. Address] **20**.

For 1x, [Device Type] **0x**, [Min. Address]**1**,[Max. Address] **10**.

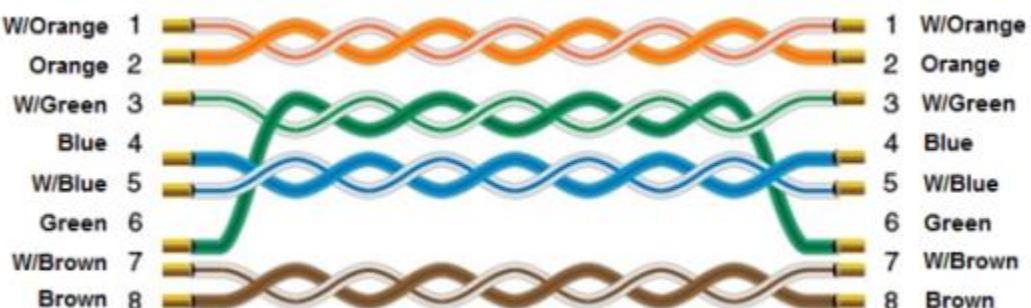

After completing all settings above, the communication is enabled.

Please click [Tag Editor] when adding this driver to initiate tag information. To edit address tag, please see the factory manual.

The following is an example of how to add Vendor ID in Tag Editor. See 3.2.3 *Identity Object* in factory manual for the detail of this ID.

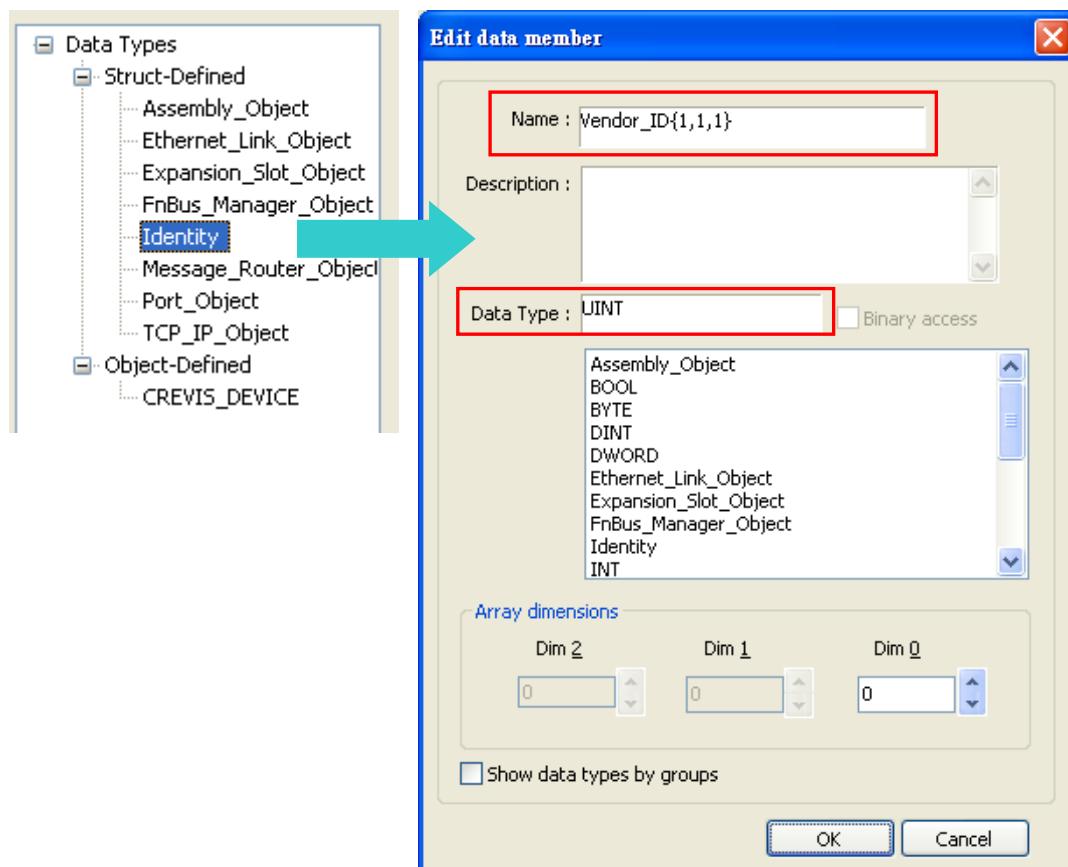

3.2. Identity Object

Class Code: 01_{HEX}

3.2.3. Instance Attributes

| Instance ID | Attribute ID | Access Rule | Name | Data Type | Value |
|-------------|--------------|-------------|--------------|-------------------------------------|--|
| 1 | 1 | Get | Vendor ID | UINT | 741 _{DEC} (Crevis Co. Ltd) |
| 2 | | Get | Device Type | UINT | 0C _{HEX} (Communications Adapter) |
| 3 | | Get | Product Code | UINT | 512 _{DEC} (NA-9188) |
| 4 | | Get | Revision | Structure of: - Major - Minor | USINT USINT 1 ~ 9 1 ~ 255 |

Under Struct-Defined select Identity to add Vendor_ID. {1,1,1} represents {Class code , Instance ID , Attribute ID}. Enter “UINT” in Data Type field according to the factory manual. When finished, this data member can be found in Identity Object.

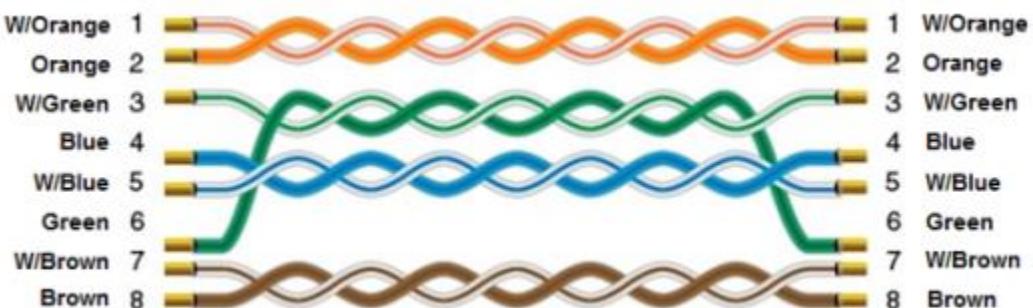

Support Device Type:

| Data type | EasyBuilder data format | Memo |
|-----------|--|-------------|
| Bool | bit | |
| Byte | 16-bit BCD, Hex, Binary, Unsigned | 8-bit |
| SInt | 16-bit BCD, Hex, Binary, Signed | 8-bit |
| USInt | 16-bit BCD, Hex, Binary, Unsigned | 8-bit |
| Word | 16-bit BCD, Hex, Binary, Unsigned | 16-bit |
| Int | 16-bit BCD, Hex, Binary, Signed | 16-bit |
| UInt | 16-bit BCD, Hex, Binary, Unsigned | 16-bit |
| DWord | 32-bit BCD, Hex, Binary, Unsigned | 32-bit |
| DInt | 32-bit BCD, Hex, Binary, Signed | 32-bit |
| Real | 32-bit Float | 32-bit |
| UDInt | 32-bit BCD, Hex, Binary, Unsigned | 32-bit |
| Array | Word array for ASCII input and display | Length=word |

How to connect OMRON NJ and NX Series:

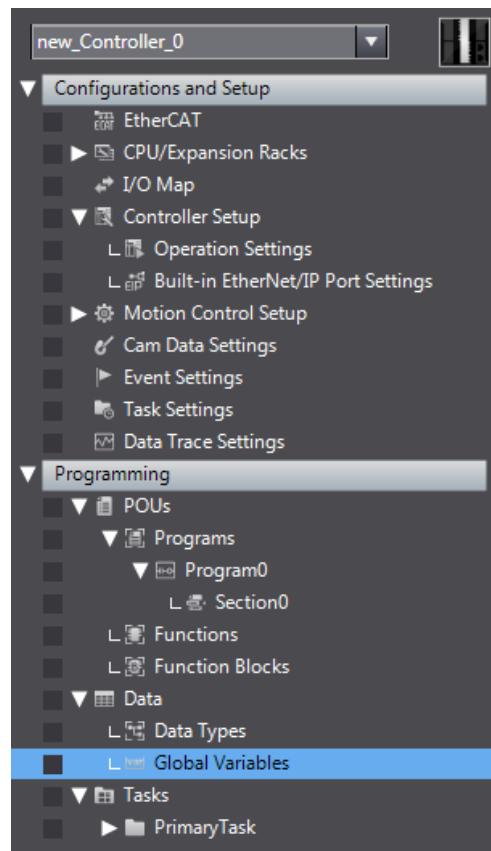

1. In the tree menu on the left hand side, select Controller Setup » Built-in EtherNet/IP Port Settings.

2. Click the button (FINS) marked in the red frame below, and enter 9600 as the FINS/UDP port number. Select Automatic Generation as conversion method.

3. Select Global Variables to set PLC address.

4. Please note that the setting marked in red frame below should be an absolute address mapping to Omron Etherne.

Instructions:

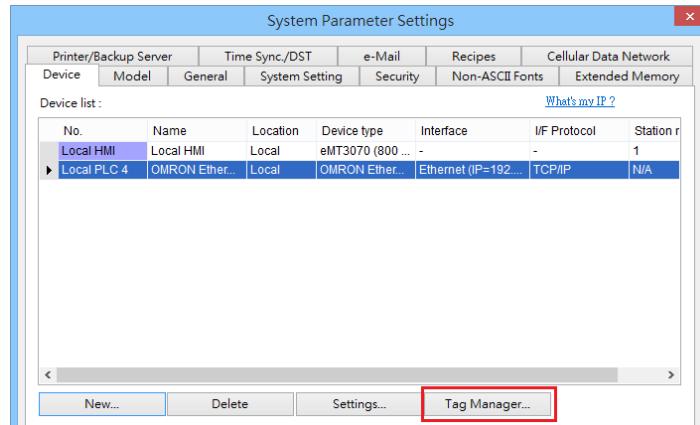

Note:

1. In Sysmac Studio, please select **[Publish Only]** for **[Network Publish]** when setting address tag.
2. When **[Do not publish]** is selected for a tag, different import methods may lead to different results. When import tags by **[Get Tags from Device]**, the tag will be eliminated. If **[Import tags]** is selected, the tags will be imported, but the communication will not succeed.

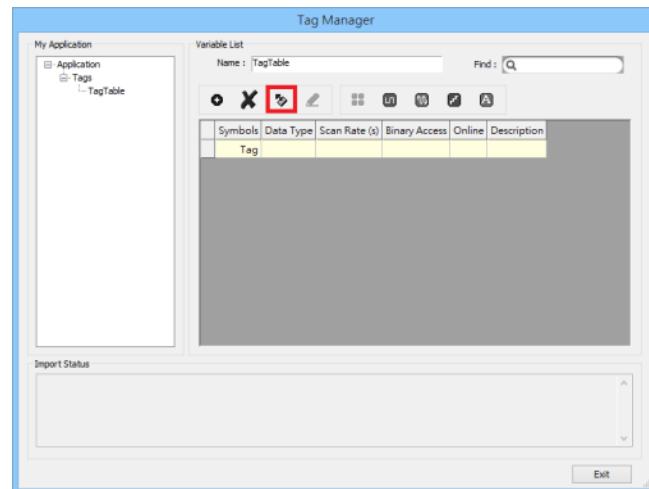

Get Tags from Network

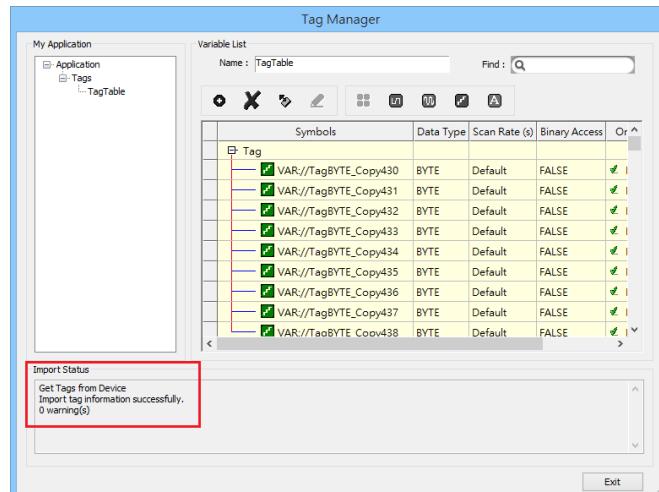

1. In EasyBuilder, open System Parameter Settings, and add **Omron EtherNet/IP (NJ series)**. Set communication parameters, and then click **[Tag Manager]**.

2. Click **[Get Tags] » [Get Tags from Device]**.

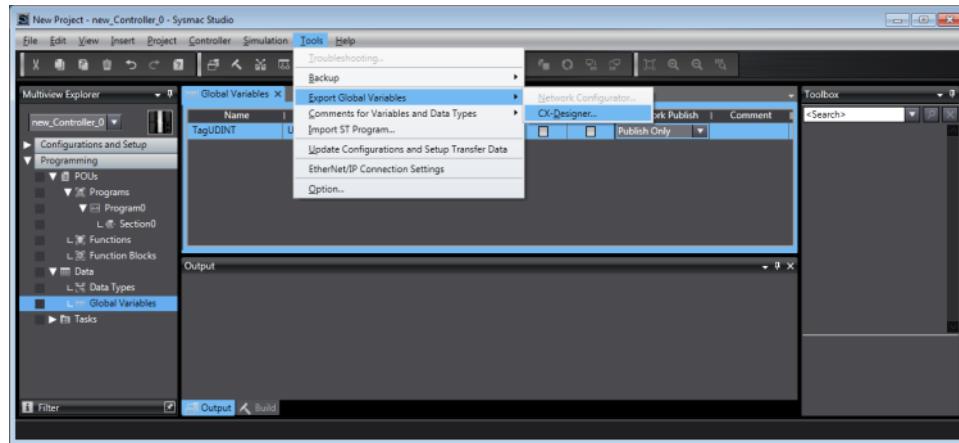

3. The **Import Status** field shows the result, click **[Exit]** to finish importing address tags.

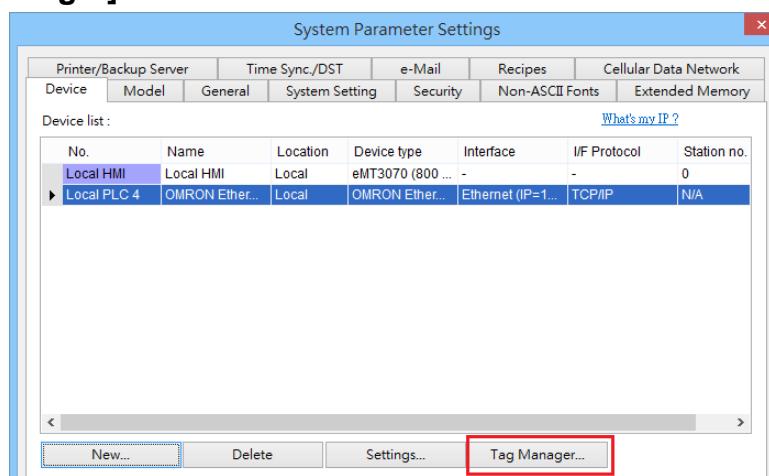

Export Tags from Sysmac Studio

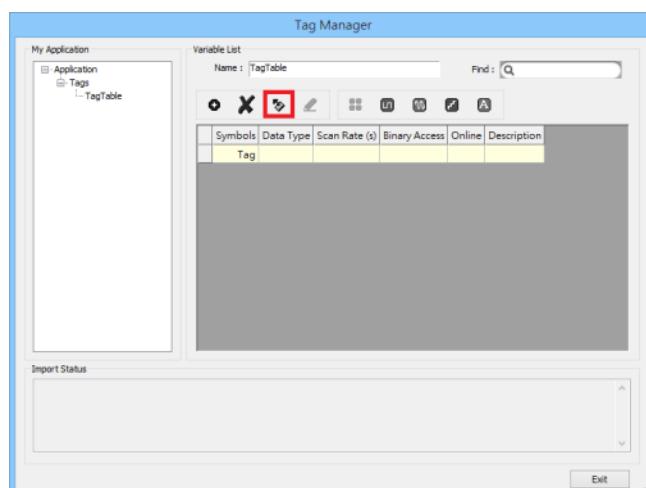

1. Launch Sysmac Studio, under Global Variables create the address tags, and then select **[Tools] » [Export Global Variables]**.

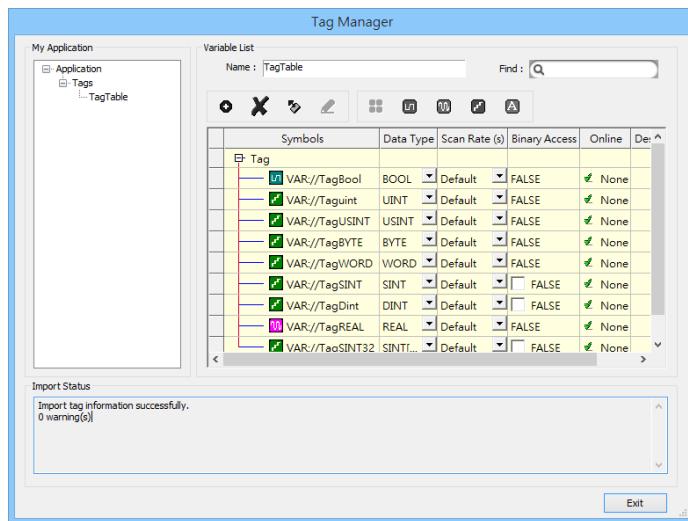

2. Launch EasyBuilder, in System Parameter Settings add **Omron EtherNet/IP (NJ series)**.
3. Click **[Tag Manager]**.

4. Click **[Get Tags] » [Import Tags]** and then select the file exported in step 1.

5. The **Import Status** field shows the result, click [**Exit**] to finish importing address tags.

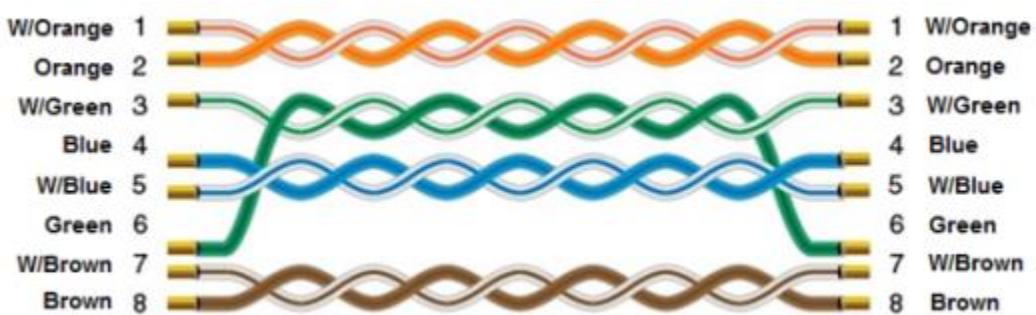

- Supported data types include: BOOL, SINT, BYTE, USINT, INT, WORD, UINT, DINT, REAL, UDINT and DWORD. These data types support one-dimensional array.

Support Device Type:

| Real | 32-bit Float | 32-bit |
| UDInt | 32-bit BCD, Hex, Binary, Unsigned | 32-bit |

Get Tags:

1. In EasyBuilder Pro, add OPC UA Client into the device list, set **[IP address]**, **[Port no.]**, and then open **[Security, Authentication]**.
2. Click the magnifier icon near the **[Endpoint url]** field to open Discover Server window. In the window the security parameters of OPC UA Server can be found. Click **[Apply]**, the parameters will be automatically filled into the fields in Security group box in OPC UA Settings window. Finish the rest of the settings and then click **[OK]** to leave.

3. Click Tag Manager. If ‘**Connection failed.**’ message appears, please check the communication parameters.

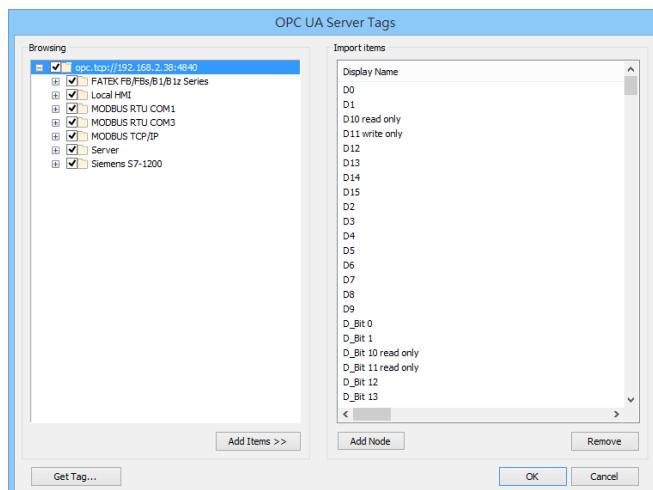

4.In the Browsing list select the tags to be imported, click **[Add Items]** to add the selected ones into **[Import items]** list. Click **OK** to save and leave, and “**Get tag information successfully.**” message will show.

Get tag: Get tag information again.

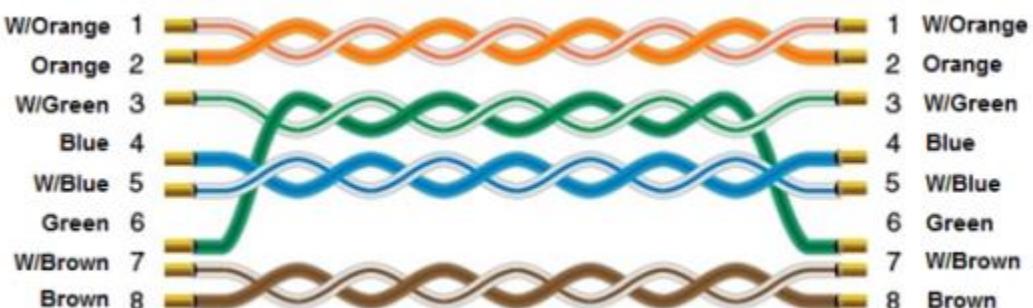

Remove: Remove tag information.

Import Tags:

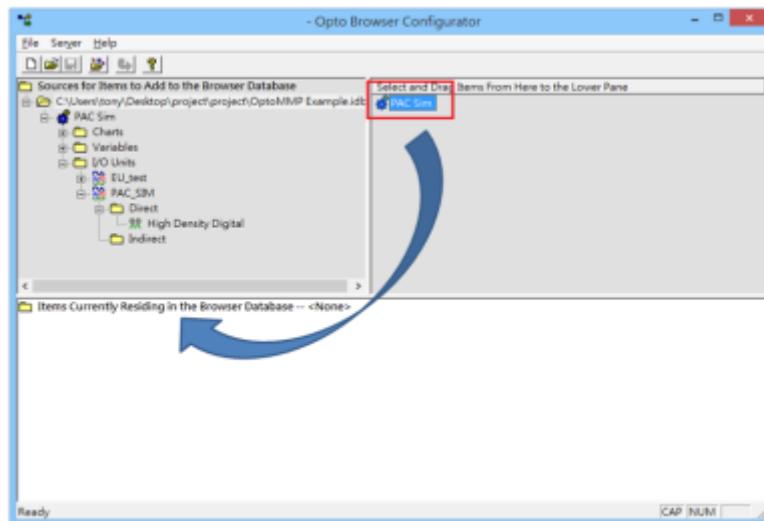

1. Open Browser Configurator, double click on **[Source for Items to Add to the Browser Database]**, and then select the PLC project containing the tags for export.

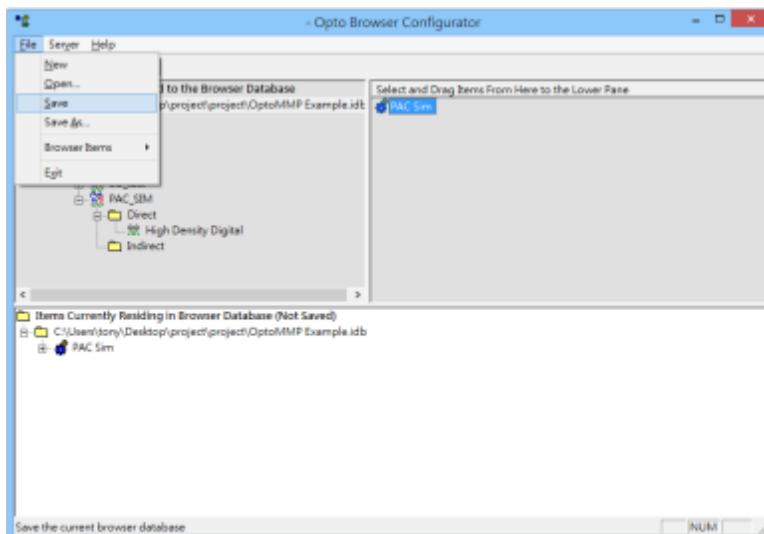

2. Select a controller and then click **[OK]**.

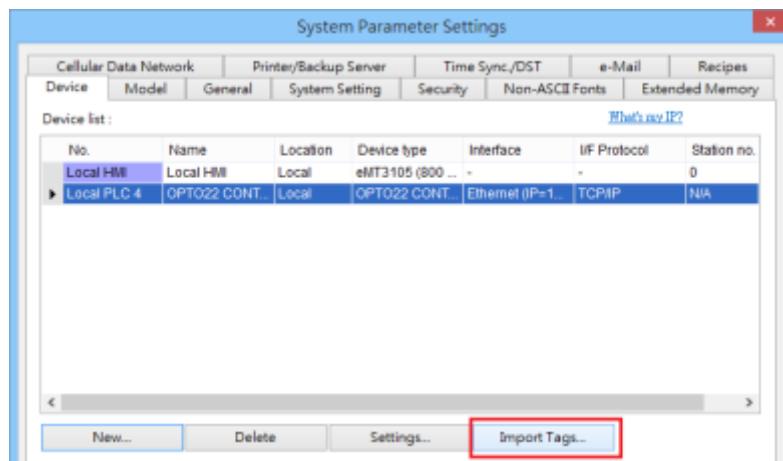

3.Drag the items from the right pane to the lower pane.

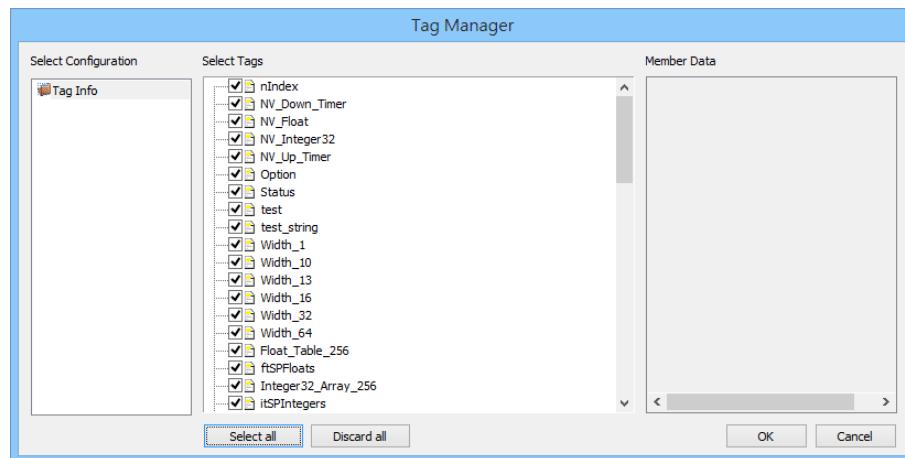

4.Name the tag file and then click [File] » [Save].

5.Launch EasyBuilder Pro, add “**OPTO22 CONT Protocol (Ethernet)**” driver into the device list, set the communication parameters, and then click [**Import Tags**].

6. Tag Manager opens after selecting a tag file. Click [**Select all**] to select all tags or select certain tags by clicking their checkboxes. Click [**OK**] to import the selected tags. “**Import tag information successfully.**” message shows when the tags are imported successfully.

| UDInt | 32-bit BCD, Hex, Binary, Unsigned | 32-bit |

Import Tags:

- The file for import must be built in **Easy Build Pro\Data Type\PanasonicPowerMeter** folder. The user can build the file according to the device types in advance, as shown below.
 - ★ Name :** User-defined tag name.
 - ★ Data :** Type: Define according to the data length and range.
 - ★ Address :** The address of the device.
 - ★ Description :** The description about the address.

| Data type | Data length and range |
|-----------|-----------------------|
| BOOL | Bit |
| BYTE | 8-bits Unsigned |
| WORD | 16-bits Unsigned |
| DWORD | 32-bits Unsigned |
| UDINT | 32-bits Unsigned |
| UINT | 16-bits Unsigned |
| USINT | 8-bits Unsigned |
| SINT | 8-bits Signed |
| INT | 16-bits Signed |
| DINT | 32-bits Signed |
| REAL | 32-bits Float |

- In EasyBuilder select [**Panasonic Eco-Power Meters**] driver, and then click [**Station No. and Device Model**].

3. [Station no.]: Set the station number according to the device, the range is 1~99.

[Name]: The name of the device.

[Model]: The models with their address tag files saved in **Easy Build Pro\Data Type\PanasonicPowerMeter** can be found in the drop down list.

[Add]: Add a new model.

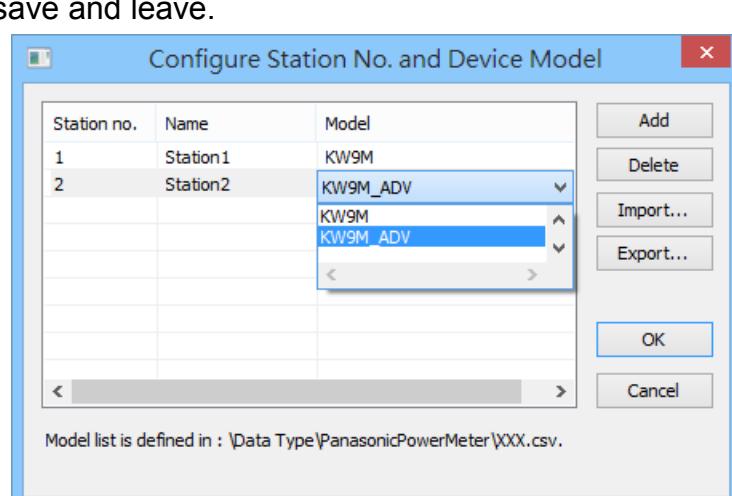

[Delete]: Delete a model. (At least one model should exist in the list.)

[Import]: Import the .dat file of the model.

[Export]: Export the .dat file of the model.

[OK]: Save and leave.

[Cancel]: Don't save and leave.

4. The imported address tags can be selected in object settings window.

Note:

1. Command 84, Command 93, Command 94, and Command 9B are write only. (These commands are able to use Set Bit Object and execute the write command after triggering Set Bit Object.). Commands other than these four are read only.
2. Parameter read/write: Use device type to define address control from 00~7F.
For example: “address_00” is mapping to “Parameter_00”.
(Please refer to Panasonic MINAS A4 Series User Manual.)
3. Device address type can define MINAS A4 Driver’s command list.
Command 20, Command 27, and Command 28 are Bit type, use “Operating range” to map communication order status.
For example: “Command 20_3” means “Read state_CCW”.
(Please refer to Panasonic MINAS A4 Series User Manual.)
4. Command 91 and Command 92 are word type, use “Operating range” to map the record of 14 alarms.
For example: “Command 91_1” means “Read alarm data_First alarm”.

| Stop bits | 1 | 1 or 2 | |
| PLC sta. no. | 1 | 1-99 | Range from 1 to 99 for RS485, according to the PLC setting. |

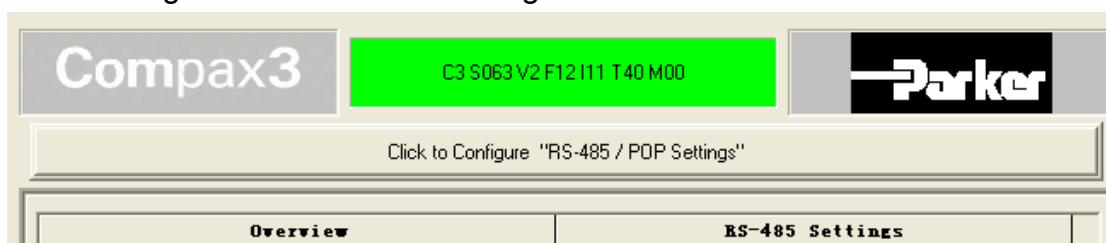

PLC Setting:

How to set Compax 3 servo to RS485 mode?

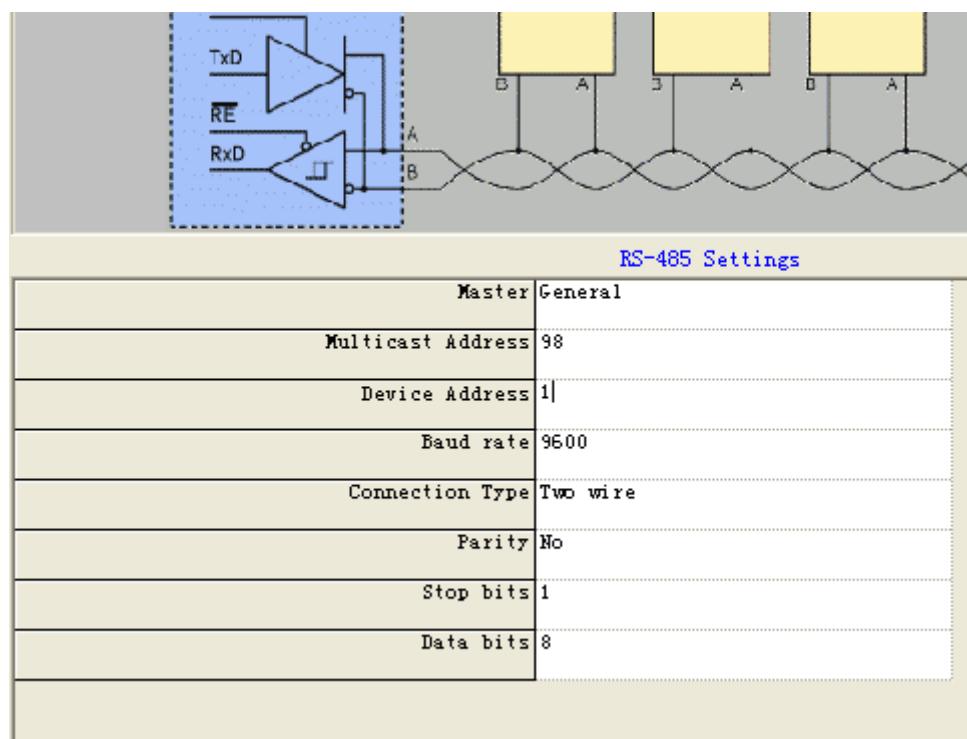

1. Open C3 ServoManager2, select “Communication” => “RS-485 Settings”.

2. Click to Configure “RS-485/POP Settings”.

3. Set parameters as below:

4. Download settings to Compax3 Servo.

5. Set EasyBuilder system parameter and connect with PLC for communication of HMI and Servo.

Device Address:

| Bit/Wor | Device type | Format | Range | Memo |
|---------|----------------|-----------|--------------|-------------------------|
| B | R_Low16bit | DDDDDDDDh | 0 ~ 9999999f | |

| W | Register_Short | DDDDDD | 0 ~ 999999 | For Register INT16, U16 |

The range of the address that can be operated depends on the address type.

(For more information, please see PLC Connection Guide)

For example:

If the read / write address is: 1901.2, please enter 190102

If the read / write address is: 400.1, please enter 40001

Ethernet cable:

Rockwell CompactLogix - Free Tag Names

Rockwell ControlLogix, CompactLogix, FlexLogix CH0 DF1.

Website: <http://www.ab.com>

HMI Setting:

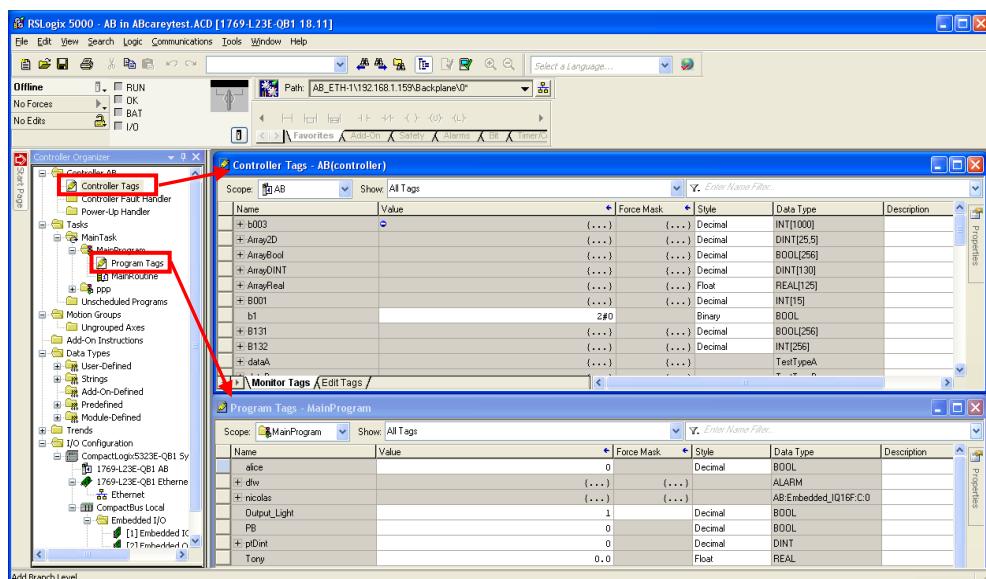

| Parameters | Recommended | Options | Notes |
|--------------------------|--|--------------------|-------|
| PLC type | Rockwell CompactLogix - Free Tag Names | | |
| PLC I/F | RS232 | | |
| Baud rate | 19200 | 9600, 19200, 38400 | |
| Data bits | 8 | 8 | |
| Parity | None | Even, Odd, None | |
| Stop bits | 1 | 1 | |
| Turn around delay | 10 | 10 ~ 100 | *Note |
| HMI sta. no. | 0 | | |
| PLC sta. no. | 1 | 1-31 | |

*Note : When the communication is not stable, please adjust the parameter of [turn around delay] till the communication is normal.

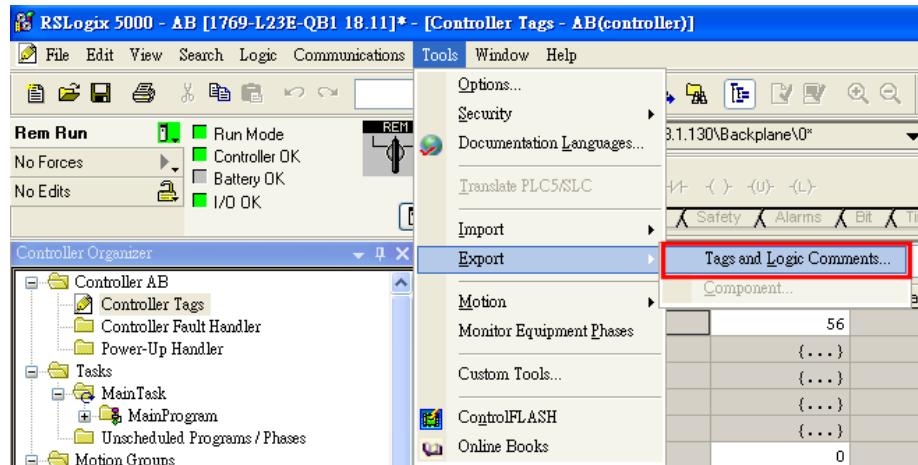

PLC Setting:

| | |
|---------------------------|---|
| Communication mode | DF1 No Handshake protocol 19200, None, 8, 1 (default) Error Check: BCC, Station Address: 1 |
|---------------------------|---|

1. Create new tags (Controller Tags and Program Tags supported).

2. Export Tag data to CSV file. ([Tools] » [Export] » [Tags and Logic Comments])

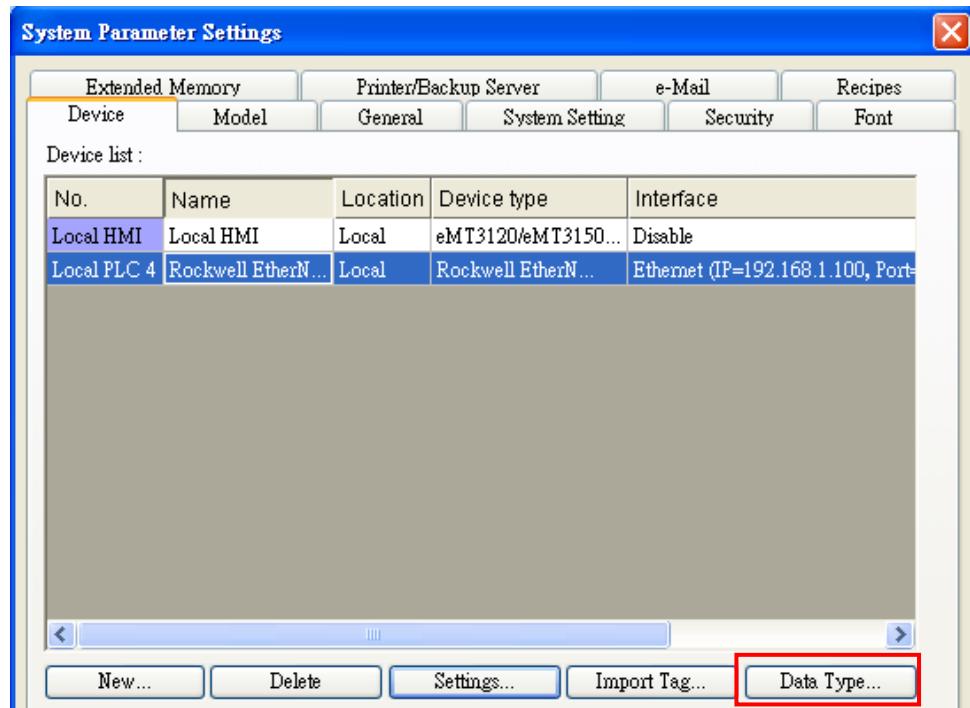

Note: The separator character in CSV file must be a comma “,” otherwise the file is invalid.

| | | | |
|-----|------|---------|---|
| TAG | B003 | INT[20] | (RADIX := Decimal, PLCMappingFile := 3, Constant := false, ExternalAccess := Read/Write) |
| TAG | B012 | INT[32] | (RADIX := Decimal, PLCMappingFile := 12, Constant := false, ExternalAccess := Read/Write) |
| TAG | B015 | BOOL | (RADIX := Binary, Constant := false, ExternalAccess := Read/Write) |

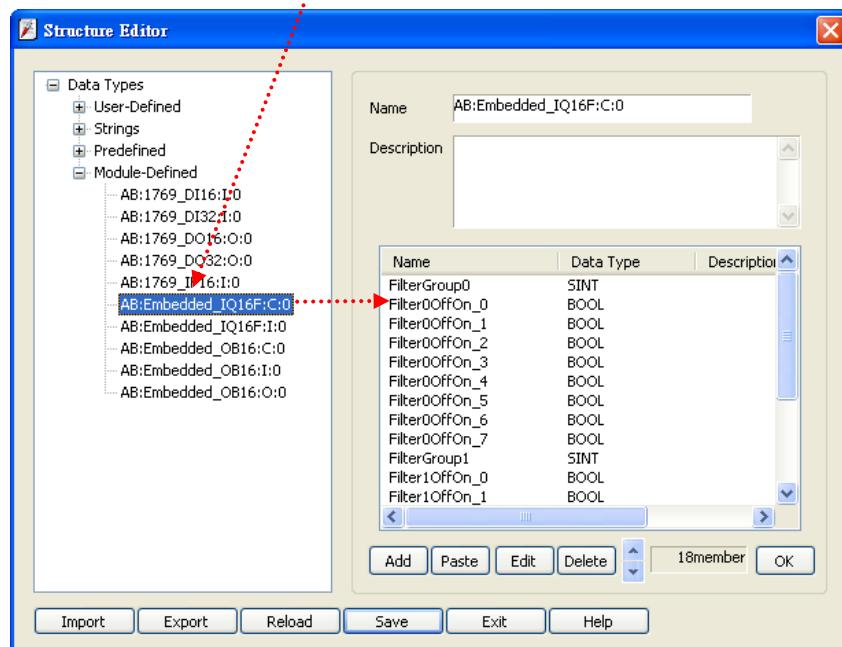

The directory of changing system settings: **[Control Panel] » [Date, Time, Language, and Regional Options] » [Change the format of numbers, dates, and times] » [Customize] » [List separator]**. Please select “,” and export CSV file after setting.

3. Open EasyBuilder project file, select the driver and set communication parameter.
 Click [Data Type] to open [Structure Editor] and edit the data type of the tags.

| TYPE | SCOPE | NAME | DESCRIPTION | DATATYPE | SPECIFIER | ATTRIBUTES |
|------|-------|-----------|-------------|-----------------------|-----------|------------|
| TAG | | Local:1:C | | AB:Embedded_IQ16F:C:0 | | |

| TAG | | Local:2:I | | AB:Embedded_OB16:I:0 | | |
| TAG | | Local:2:O | | AB:Embedded_OB16:O:0 | | |

4. In [Structure Editor] edit the data type of [Program Tag].

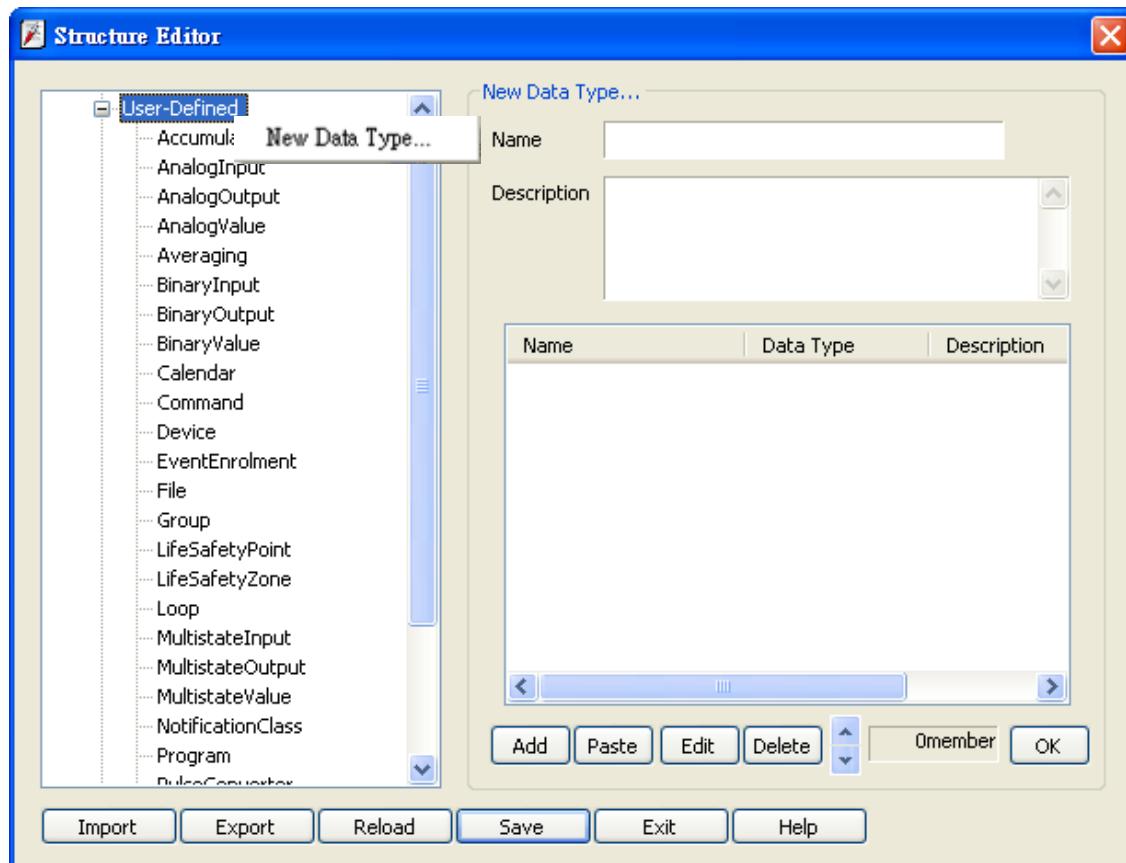

The imported csv file is shown below:

Note: The Program Tag can directly be imported in EasyBuilder Pro V3.00.05, EasyBuilder 8000 V4.65.08, and the later versions. Please go to step 5 without editing manually.

| | TYPE | SCOPE | NAME | DESCRIPTION | DATATYPE | SPECIFIER |
|----|------|-----------------|------------------|-------------|-----------------------|------------------|
| 7 | TAG | | Local:1:C | | AB:Embedded_IQ16F:C:0 | |

| 18 | TAG | MainProgram | Output_Light | | | Local:2:O.Data.1 |
| 19 | TAG | MainProgram | PB | | BOOL | |

Step 1

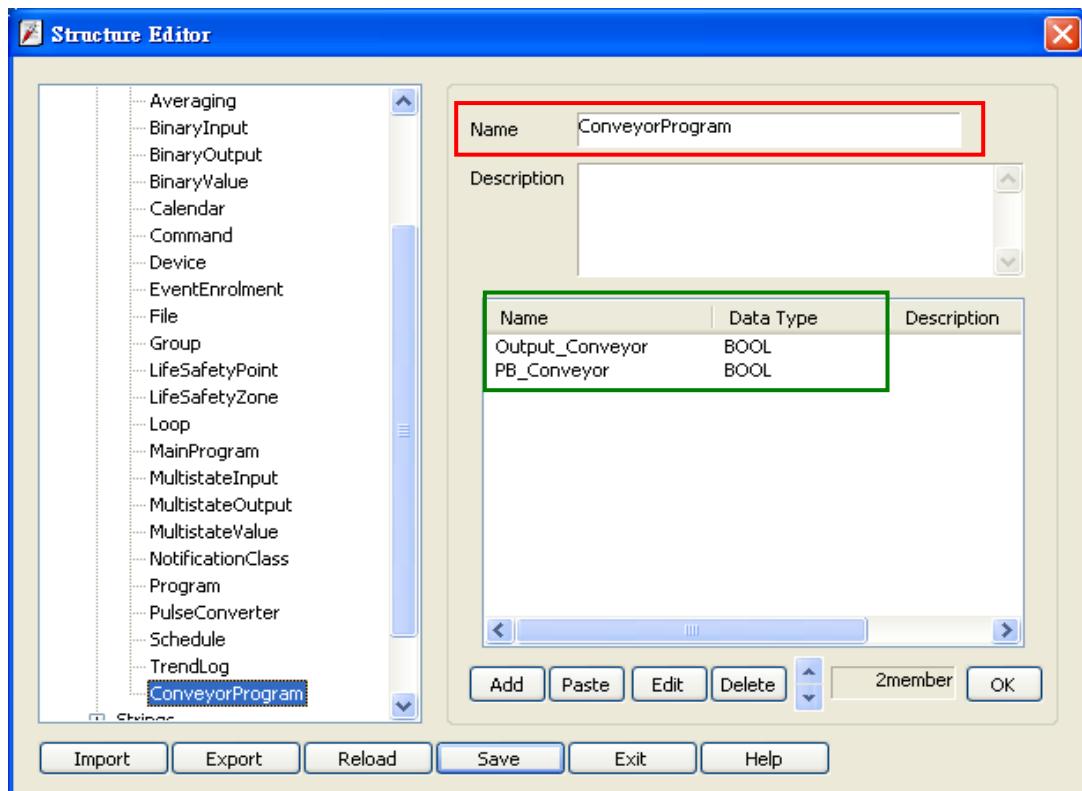

Right click on [Structure Editor] » [User-Defined] to add a [new data type].

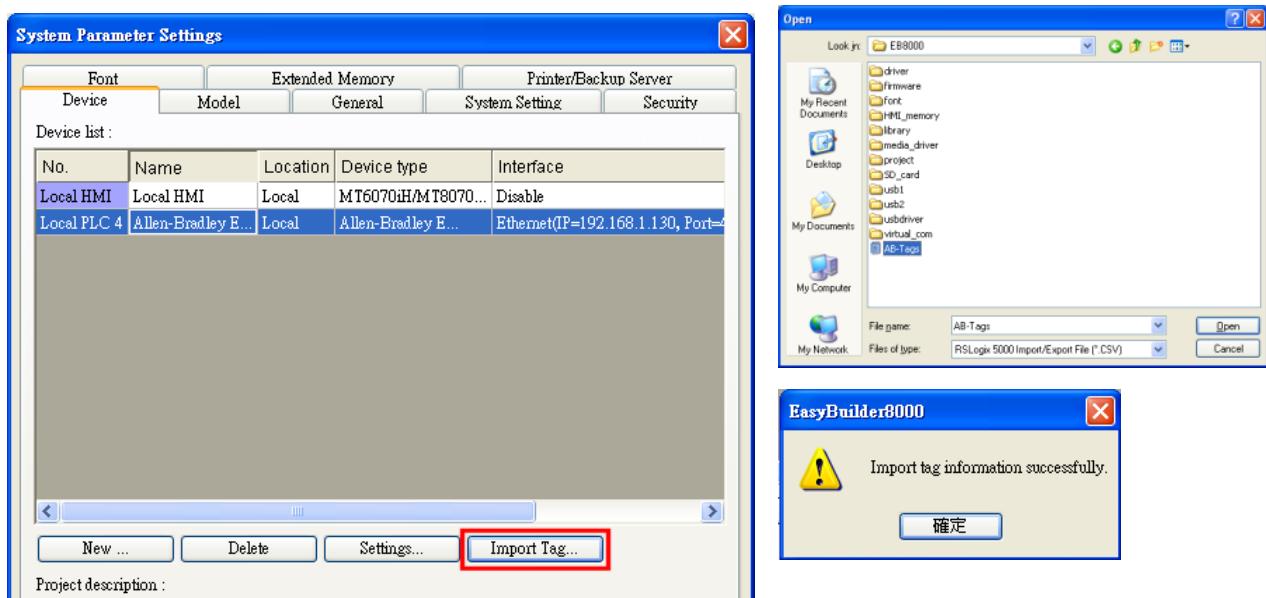

Step 2

After adding all Program Tags, click [OK] » [Save] » [Exit] to leave the editor dialog.

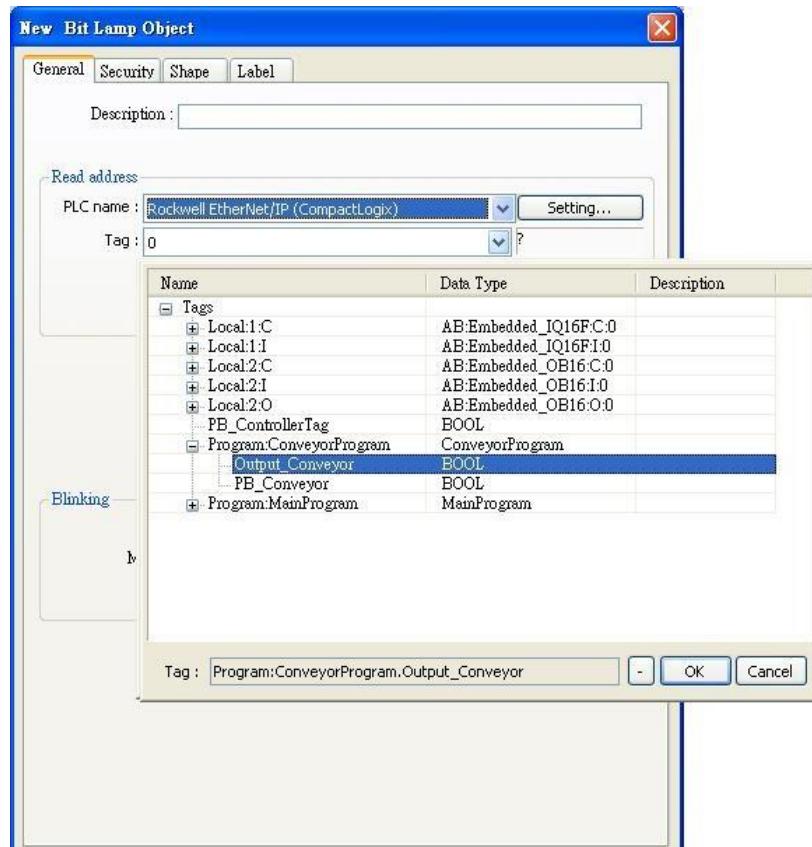

| TYPE | SCOPE | NAME | DESCRIPTION | DATATYPE | SPECIFIER |
|-------|-----------------|-----------------|-------------|----------|------------------|
| ALIAS | ConveyorProgram | Output_Conveyor | | | Local:2:0.Data.2 |

| TYPE | SCOPE | NAME | DESCRIPTION | DATATYPE | SPECIFIER |
| ALIAS | MainProgram | Output_Light | | | Local:2:0.Data.1 |
| TAG | MainProgram | PB | | BOOL | |

5. In [System Parameter Settings], click [Import Tag], select the csv file. After importing a message window is displayed.

6. In the object property dialog, select PLC Tag address.

Device Address:

| PLC Data Type | Bit/Word | EasyBuilder Data Format | Memo |

How to Import Tags:

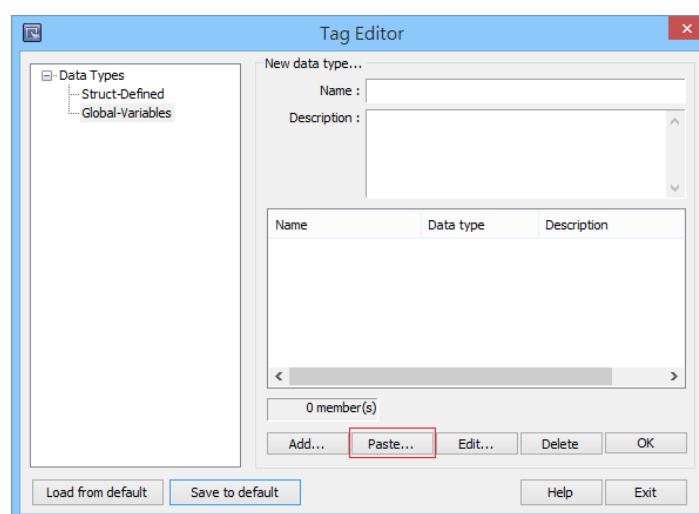

1. Click [Tag Editor].

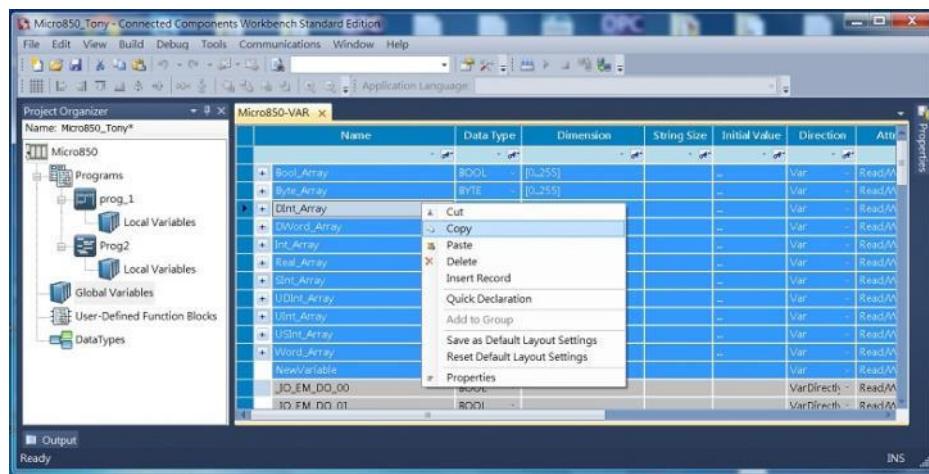

2. Right-click [Global-Variables] and select [New data type].

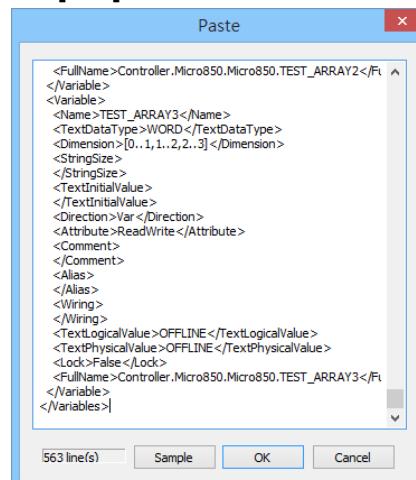

3. Click [Paste].

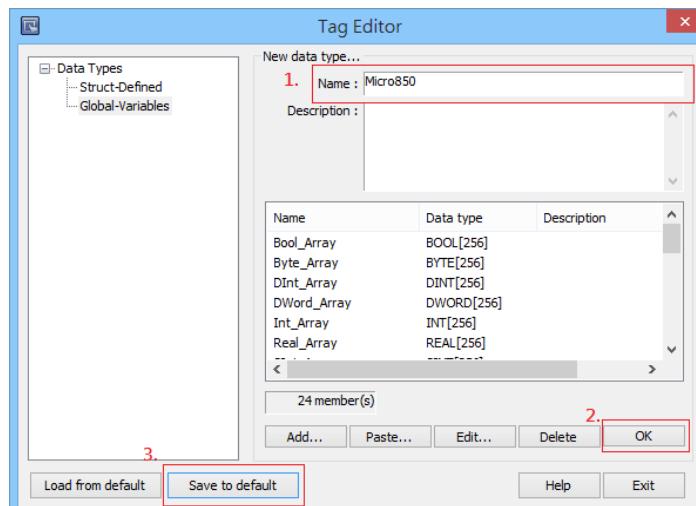

4. Launch “Connected Components Workbench” software, select and copy the tags under [Global Variables]. Note that the IO address cannot be copied and can only be manually created.

5. Paste the copied tags and click [OK].

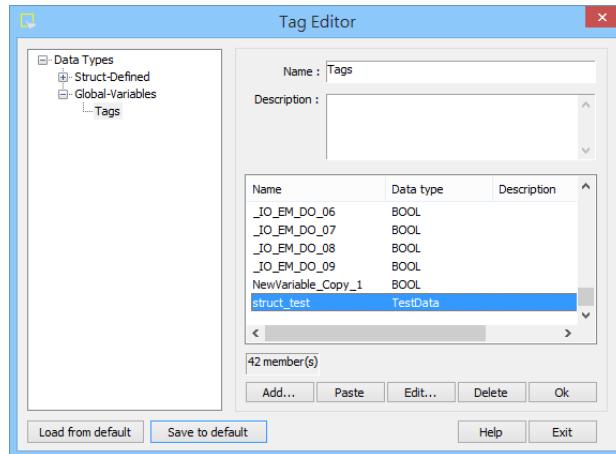

6. Enter [Name], click [OK], and then click [Save to default]. The tags are now successfully created.

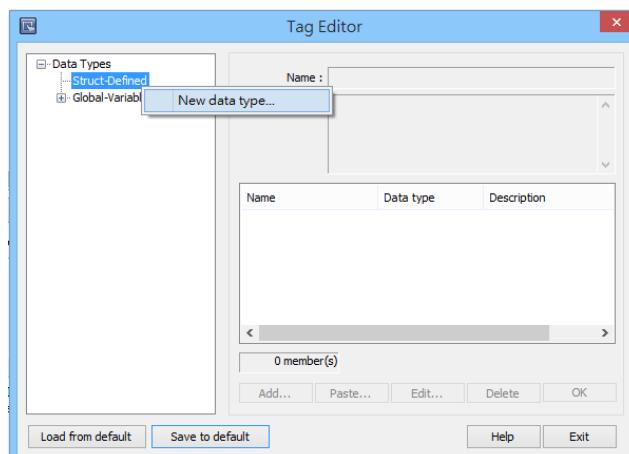

Building Struct:

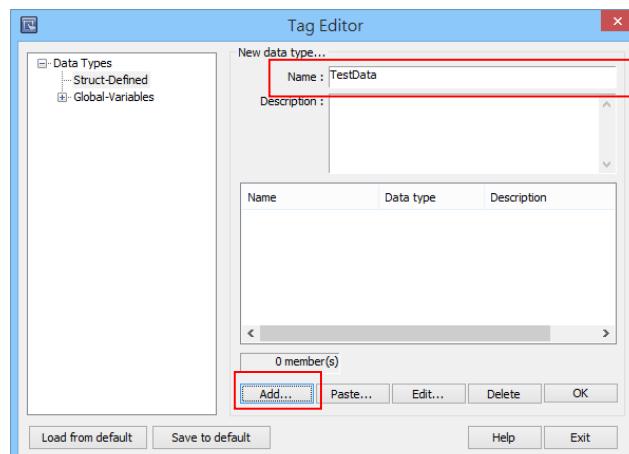

1. After importing the tags, the data type of Struct is shown as in the following figure, please build the corresponding tag under Struct-Defined.

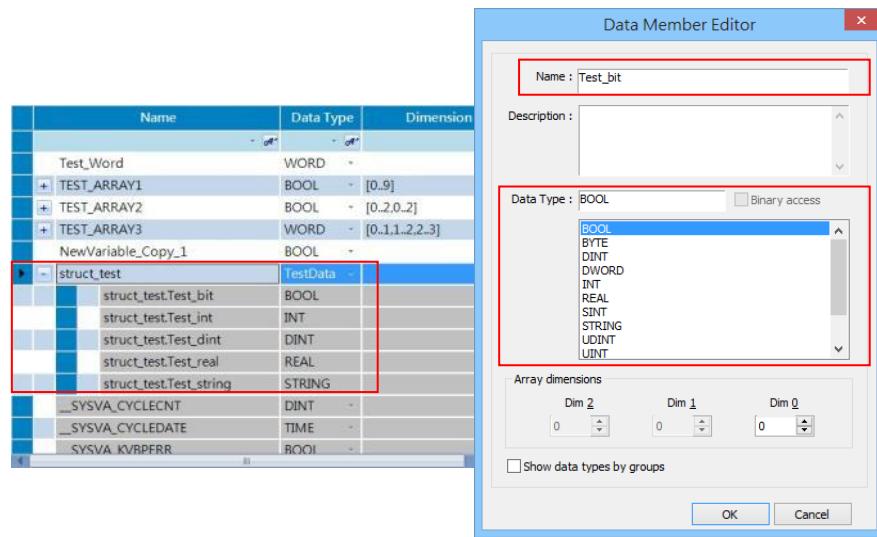

2. Right click on [Struct-Definded] and then select [New data type].

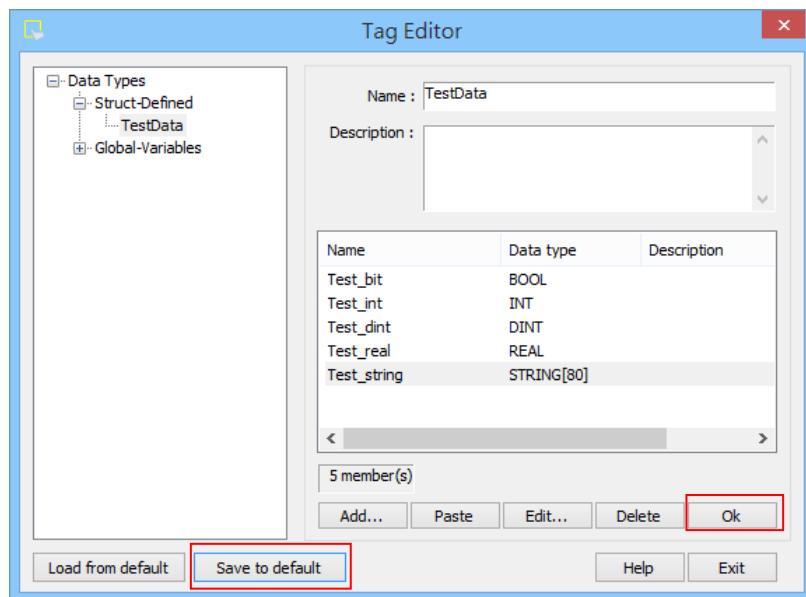

3. Enter the [Data type] in the [Name] field, and then click [Add].

4. Enter the same information in the [Name] and [Data Type] fields as shown in the original factory software, and then click [OK].

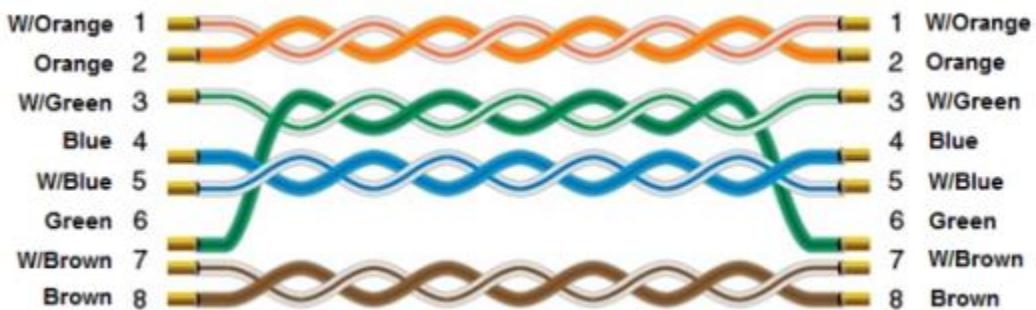

5. Upon completion click [OK] and then click [Save to default] to finish building Struct.

How to Import Tags:

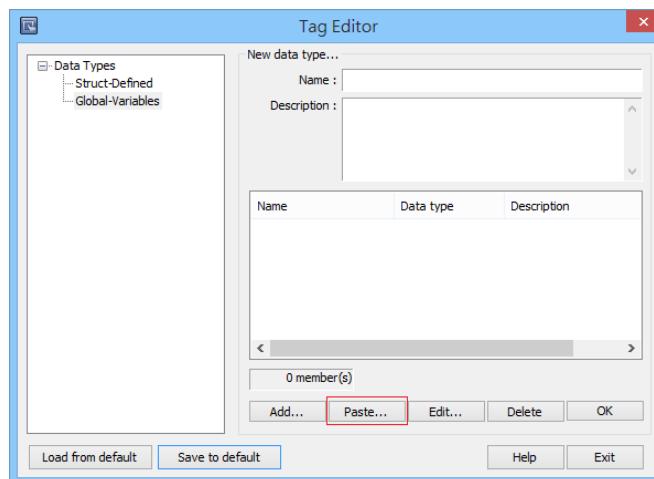

1. Click [Tag Editor].

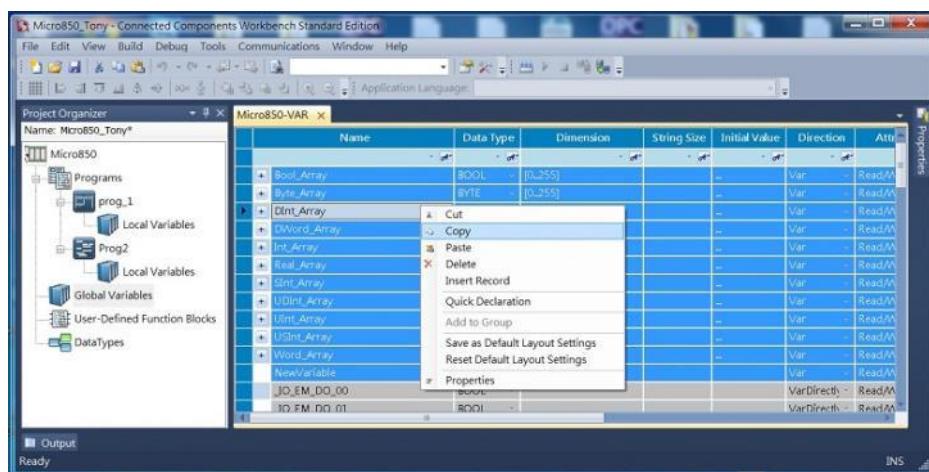

2. Right-click [Global-Variables] and select [New data type].

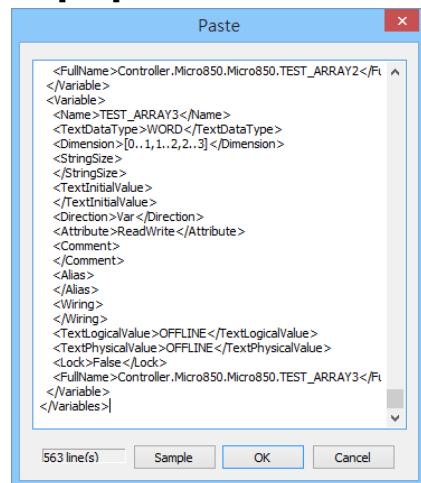

3. Click [Paste].

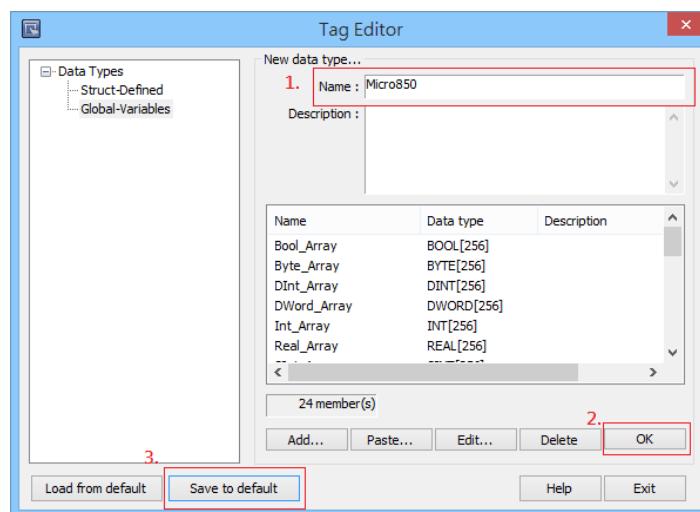

4. Launch “Connected Components Workbench” software, select and copy the tags under [Global Variables]. Note that the IO address cannot be copied and can only be manually created.

5. Paste the copied tags and click [OK].

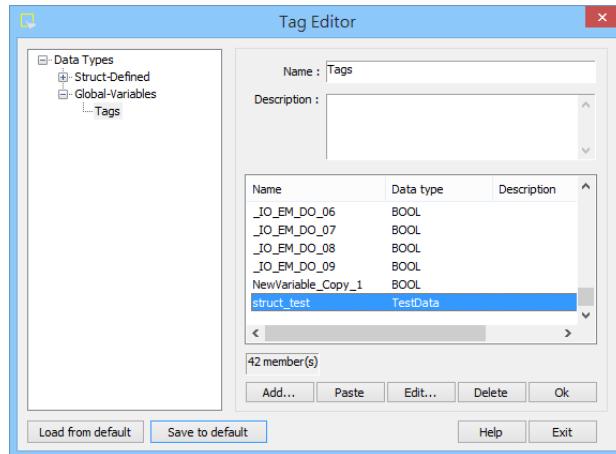

6. Enter [Name], click [OK], and then click [Save to default]. The tags are now successfully created.

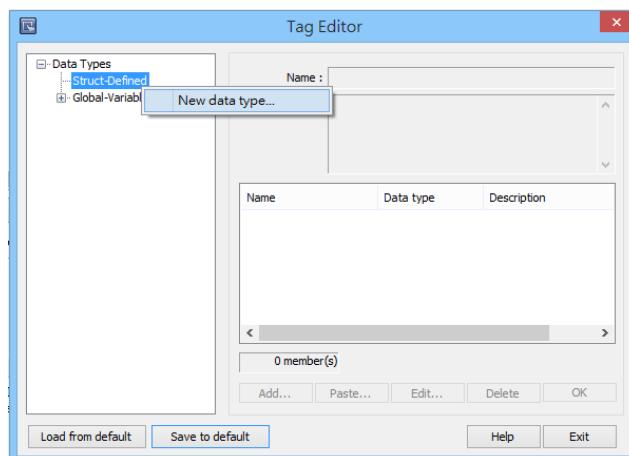

Building Struct:

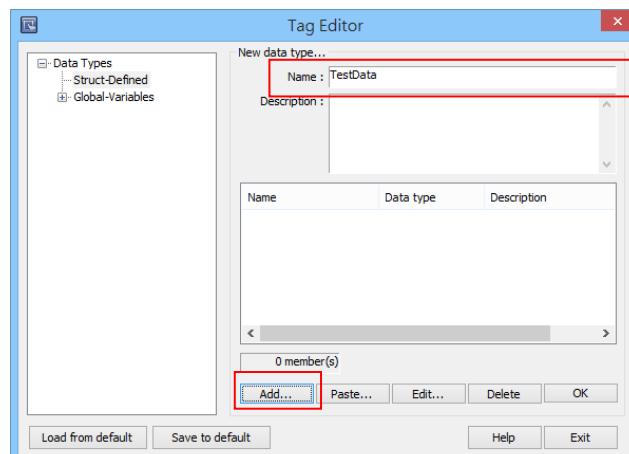

1. After importing the tags, the data type of Struct is shown as in the following figure, please build the corresponding tag under Struct-Defined.

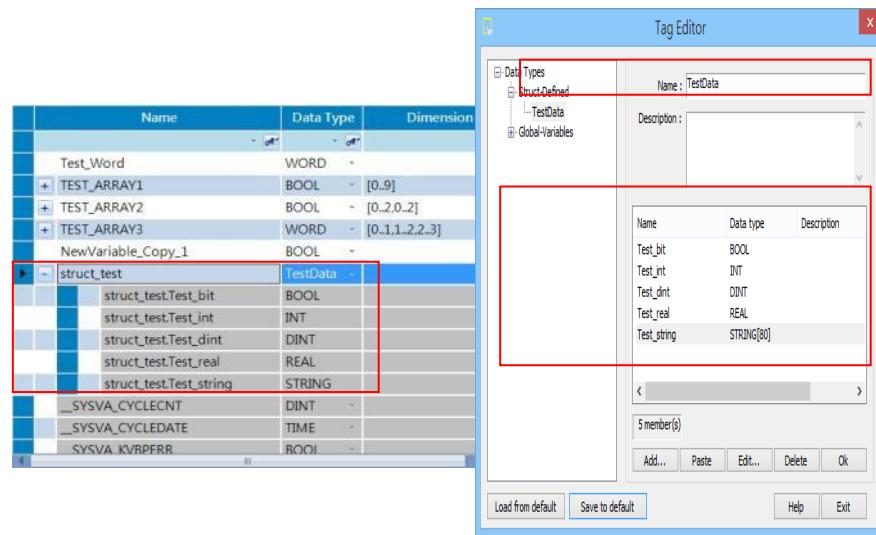

2. Right click on [Struct-Definded] and then select [New data type].

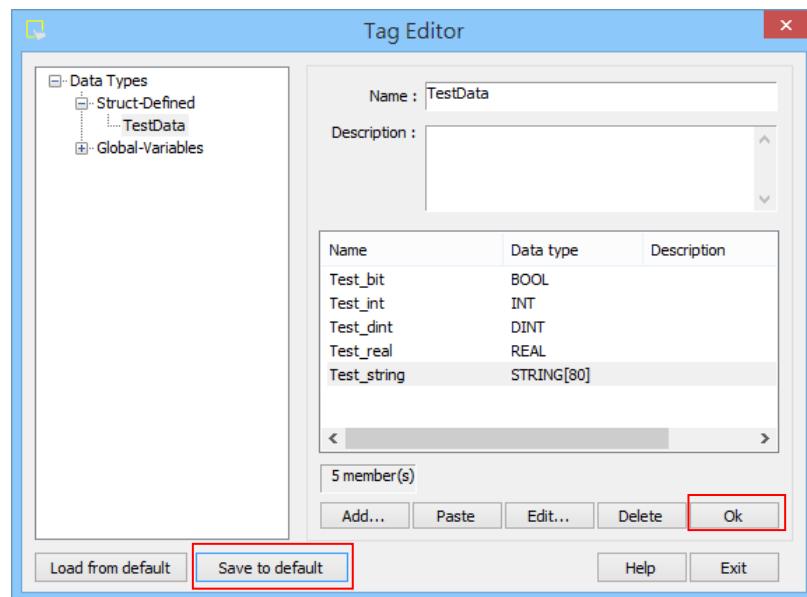

3. Enter the [Data type] in the [Name] field, and then click [Add].

4. Enter the same information in the [Name] and [Data Type] fields as shown in the original factory software, and then click [OK].

5. Upon completion click [OK] and then click [Save to default] to finish building Struct.

Allen-Bradley PLC-5 Family PLCs use DF1 Full Duplex protocol.

For PLC-5/10, PLC-5/15 and PLC-5/25, MT8000 should be connected to the DF1 port on the 1785-KE module.

For PLC-5/11, PLC-5/20, PLC-5/30 and PLC-5/40, MT8000 should be connected to the Channel 0 Port on the PLC.

| W | INT64_ASCII | DDDDDDDD | 100 ~ 6553500 | Read 64 bits signed data |

Use the driver “Schneider PowerLogic Modbus RTU”, you should see that it has extra data types in addition to Modbus ones. Because the 64-bit objects are not natively supported by numeric objects yet, we have to use ASCII objects to display them.

You can treat Mod10_2 just as any other normal address because it's also 32 bit data. However, when you use ASCII types, please beware of its special addressing method, and the length of memory allocation.

Addressing method:

it is necessary to add a suffix of 00. For example, to read register 1716 [Energy, Real Total] in PM800, you should address it with 171600.

Length of memory allocation:

When using ASCII, it is necessary to specify the length, that is, the number of word memory. Each WORD holds two characters. So if, as the picture above, I've specified the length of 10, I can have maximum of 20 characters for this object (including the negative sign). Please adjust this parameter according to the expected data.

Schneider SoMachine M Series (Ethernet)

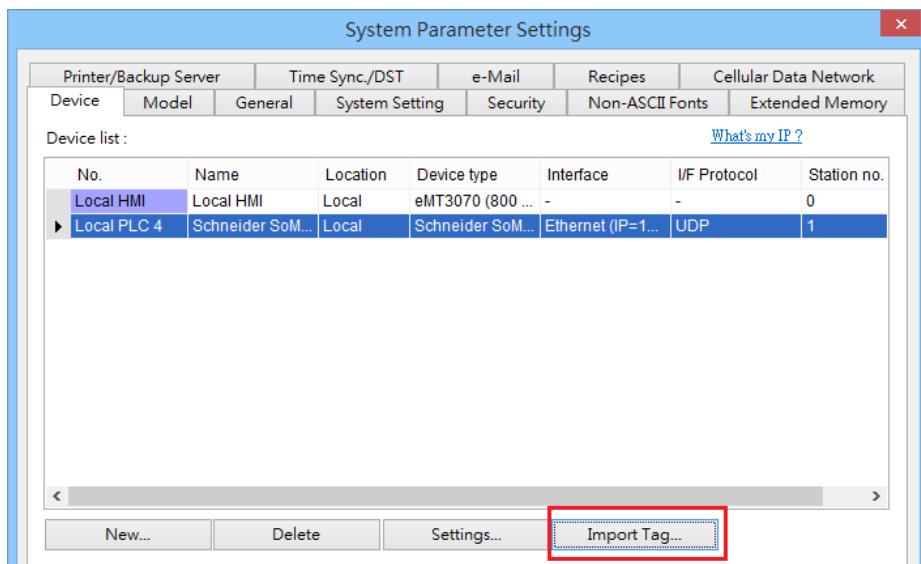

Supported series: Schneider SoMachine M238/M241/M251/M258

HMI Setting:

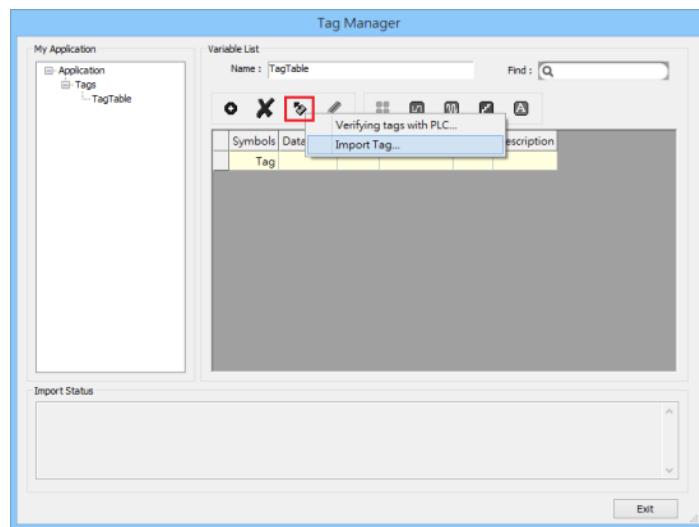

| Parameters | Recommended | Options | Notes |
|-----------------|------------------------------|-----------|---------------------------|
| PLC type | Schneider SoMachine M Series | | |
| PLC I/F | Ethernet | | Use UDP |
| Port no. | 1740 | | |
| Source port no. | 1742 | 1740/1742 | M258: 1740 Other: 1742 |

How to Import Tags:

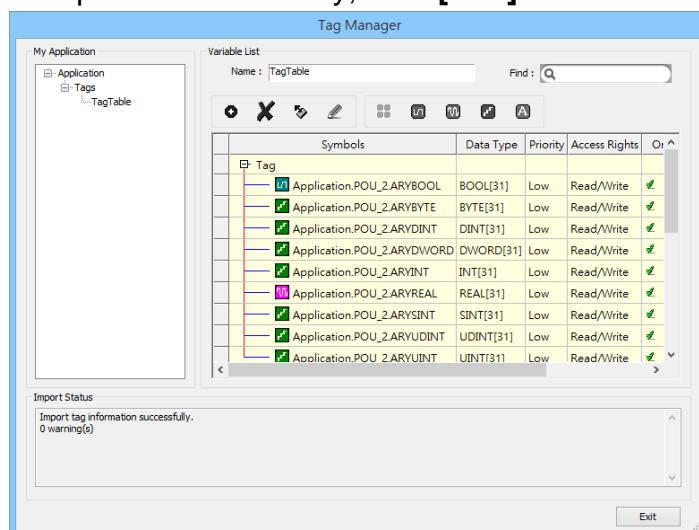

8. In System Parameter Settings click [New] to add Schneider SoMachine M Series driver into the device list and then click [Import Tag].

9. In Tag Manager click **Get tag** -> **Import Tag**, and then select the tag file (.xml) generated by the PLC software.

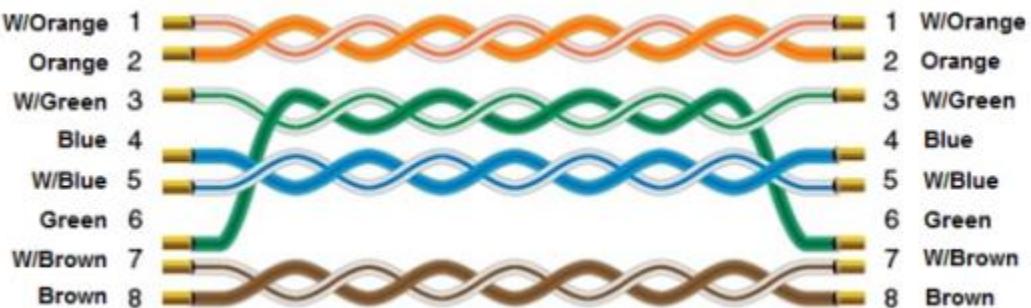

10. When the tags are imported successfully, click **[Exit]** to leave.

Siemens LOGO (Ethernet)

Supported Series: Siemens LOGO! 0BA7,0BA8

Website: <http://www.siemens.com/entry/cc/en/>

HMI Setting:

| Parameters | Recommended | Options | Notes |
|---------------------|-------------------------|---------|---------------------------|
| PLC type | Siemens LOGO (Ethernet) | | |
| PLC I/F | Ethernet | | |
| Port no. | 102 | | |
| PLC sta. no. | 1 | 1~99 | |
| Local TSAP | 1000 | | Must be greater than 1000 |
| Remote TSAP | 2100 | | Range:2000~2700 |

★ For TSAP settings please refer to PLC Setting below.

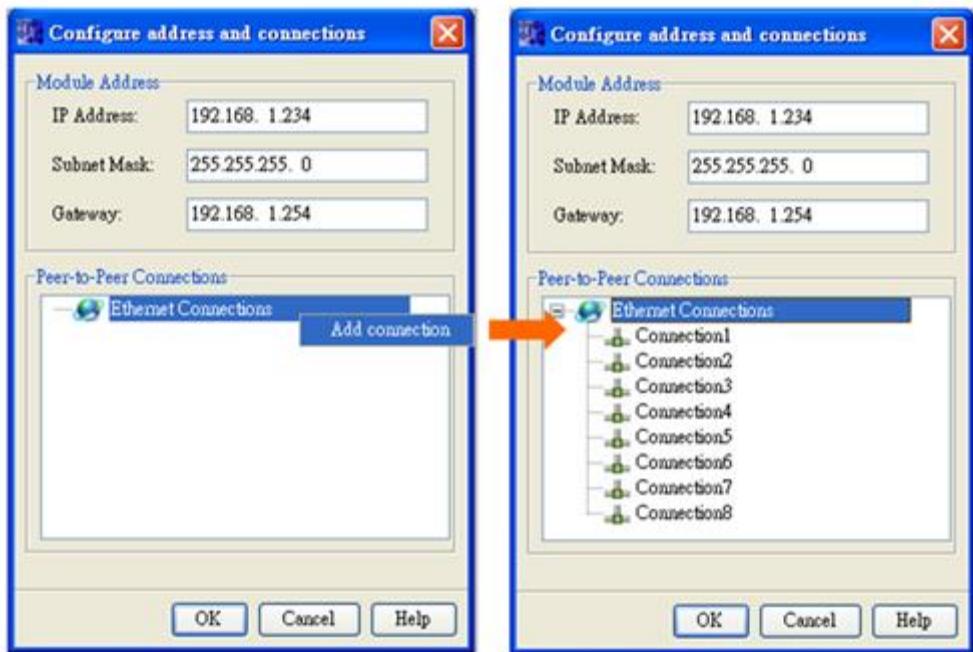

PLC Setting:

Siemens LOGO! multi connection setting requires LOGO! Soft Comfort software to set PLC to identify the connected devices. The following introduces LOGO! Soft Comfort settings.

Step 1. Tools -> Ethernet Connections

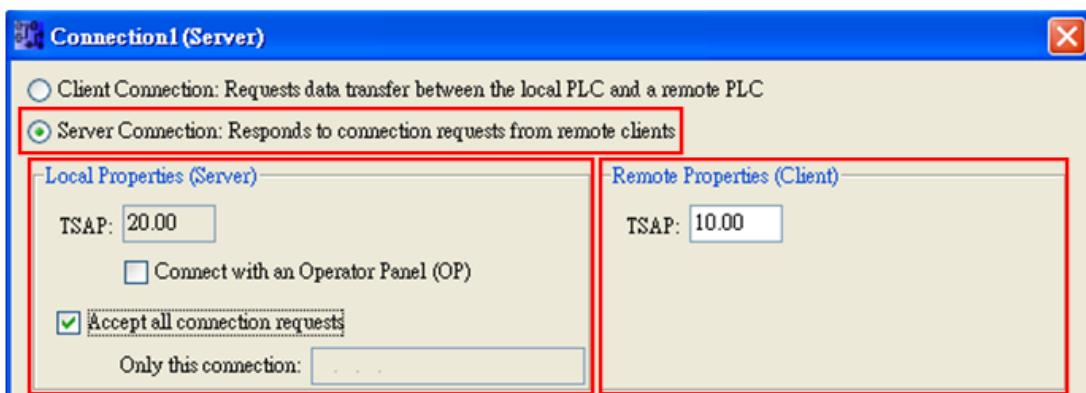

Step 2. Right click on "Ethernet Connections" and click "Add connections" to add a connection, up to eight connections are allowed.

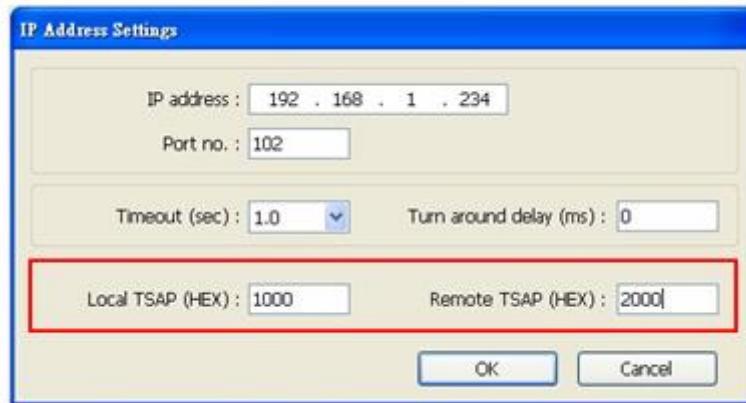

Step 3. Setting Server

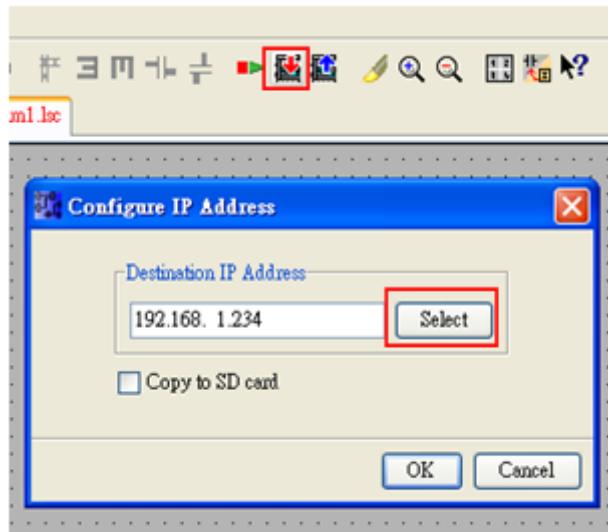

- I. Double click on Connection1, then select "Server Connection".
- II. Local TSAP is system default and can't be modified. Tick "Accept all connection requests" to connect to any IP.
- III. Remote TSAP set to "10.00".
- IV. Connection 2~8 can all be set as above.

Note: The value of Local TSAP and Remote TSAP must be set oppositely in EasyBuilder for communication.

Step 4. Complete settings, download connection to Siemens LOGO!

Ethernet cable:

Siemens S7-1200 (symbolic addressing) (Ethernet)

Supported Series: Siemens S7-1200 series Ethernet.

Website: <http://www.siemens.com/entry/cc/en/>

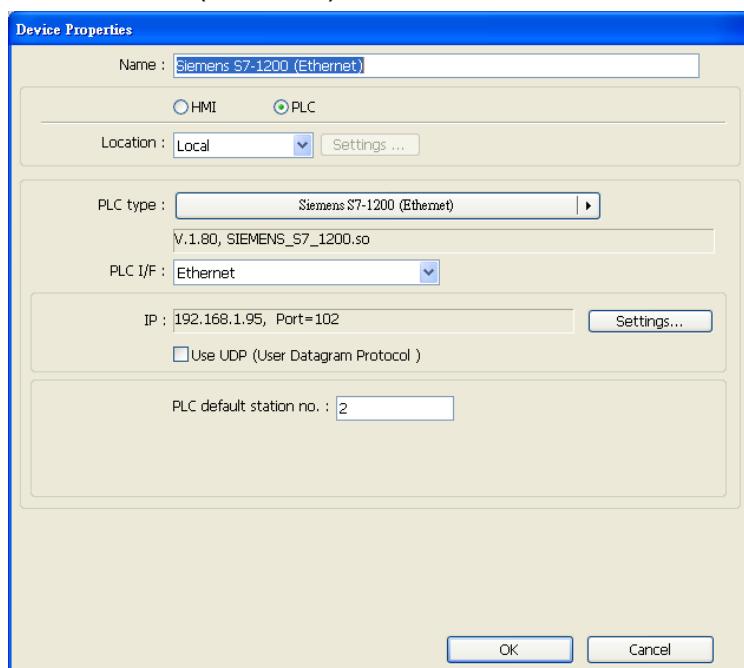

HMI Setting:

| Parameters | Recommended | Options | Notes |
|---------------------|--|---------|-------|
| PLC type | Siemens S7-1200 (symbolic addressing) (Ethernet) | | |
| PLC I/F | Ethernet | | |
| Port no. | 102 | | |
| PLC sta. no. | 2 | | |
| Rack | 0 | | |
| CPU slot | 1 | | |

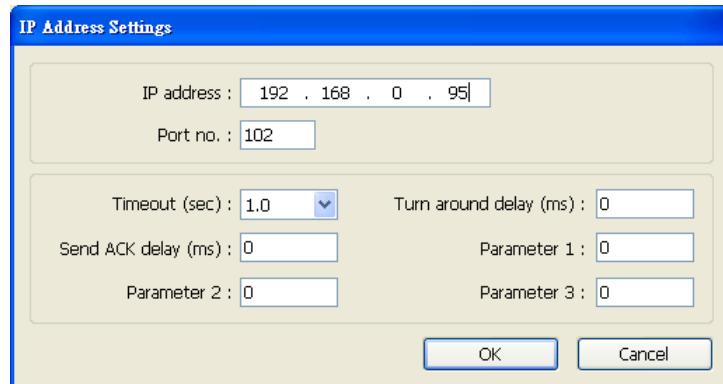

| | | | |
|-------------------|-----|-------------------|-----------------|
| On-line simulator | Yes | Multi-HMI connect | Yes (Max:3 HMI) |
|-------------------|-----|-------------------|-----------------|

PLC Setting:

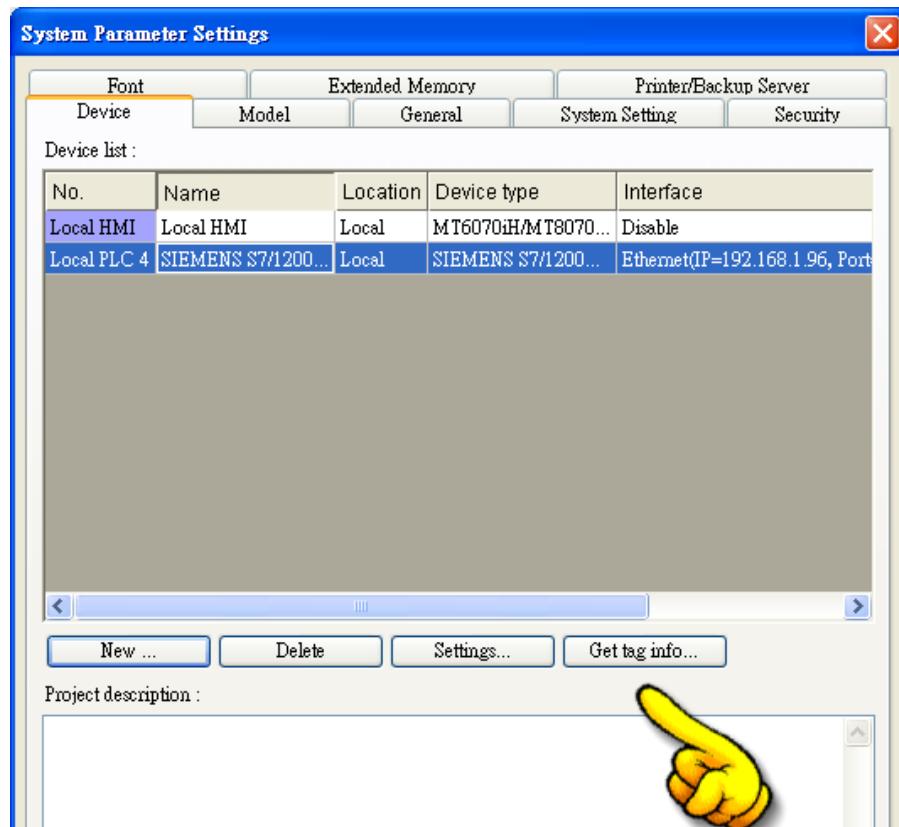

1. In S7-1200 program software create PLC program and tag and then download to PLC.
2. Select Go offline, EasyBuilder will connect to PLC and get tag data. In PLC type select “SIEMENS S7-1200 (Ethernet)”.

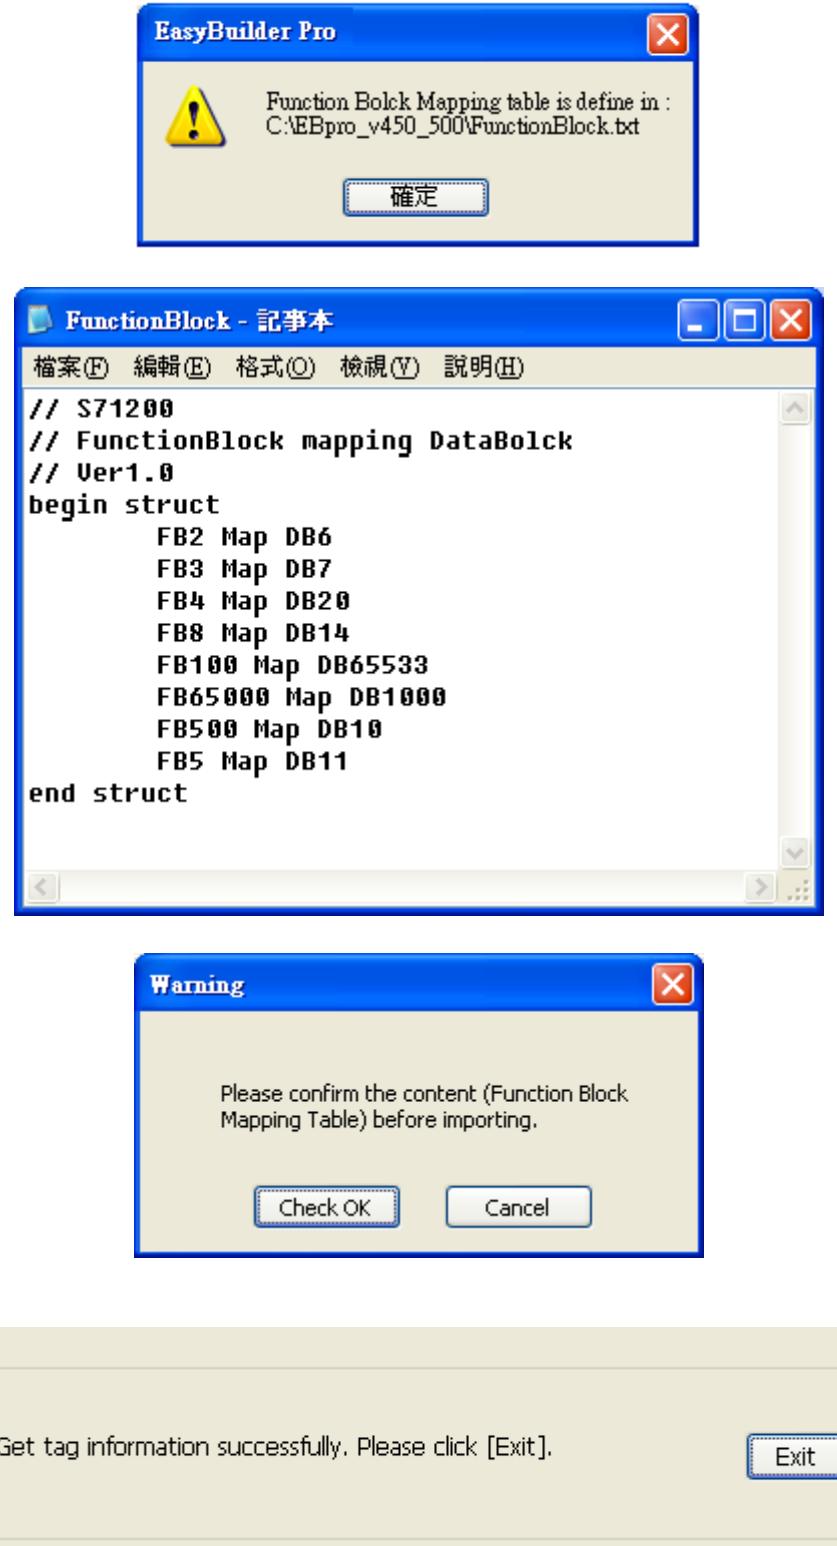

3. Click "Settings...", input PLC IP address.

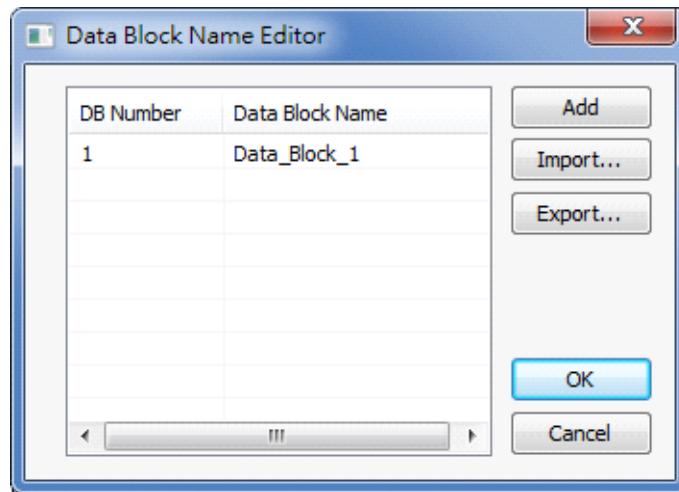

4. Check the PLC that is not connected to any PC. Click "Get tag info...".
5. Supported by firmware V3.X and previous versions. For V4.0 or later, please see [How to Connect With S7-1200 Firmware V4.0](#)

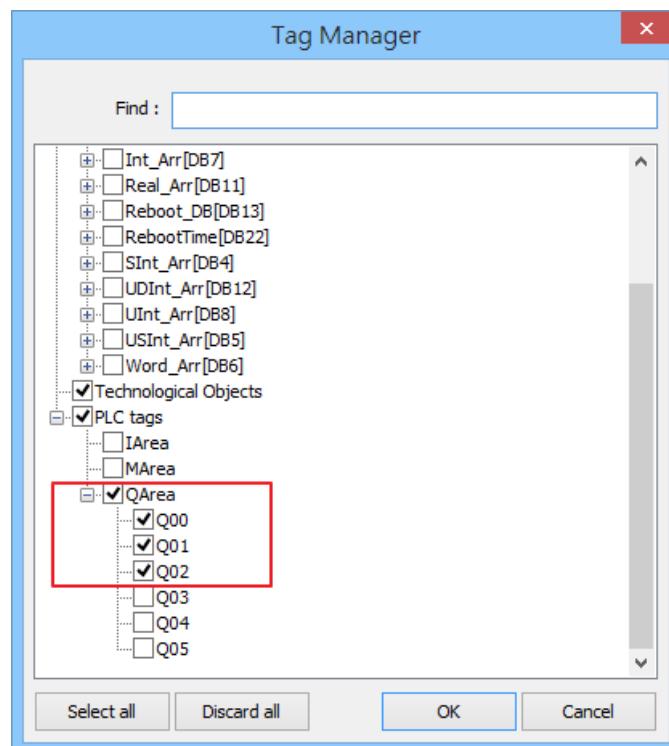

6. If the software used is a version later than TIA Portal V11 , SP2, a dialog of FunctionBlock directory will be shown, users have to define the mapping from FB to DB in this directory then click “Check OK” . The tag information will be gained and a successful message is shown.

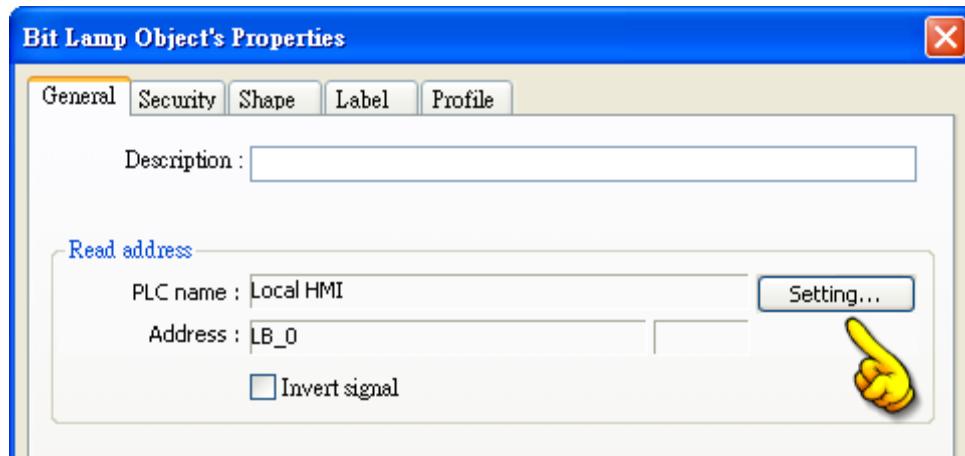

7. When opening an existing project and get the tag information again, if the PLC software used is TIA Portal V12 and later versions, the DB name must be entered again in order to compile the project.

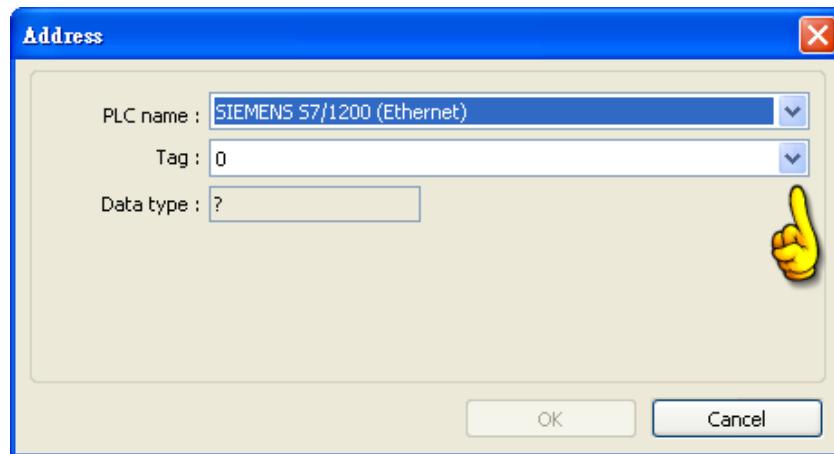

8. Added Tag Manager that allows selecting the Siemens S7-1200 PLC tags to be imported.

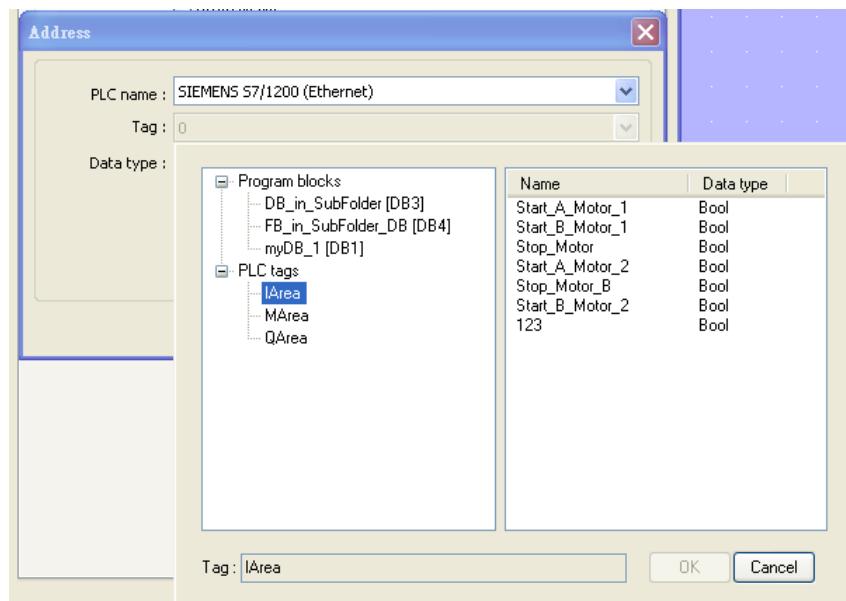

9. Create an object and click read address “Setting...”

10. In PLC name select S7-1200 then click Tag.

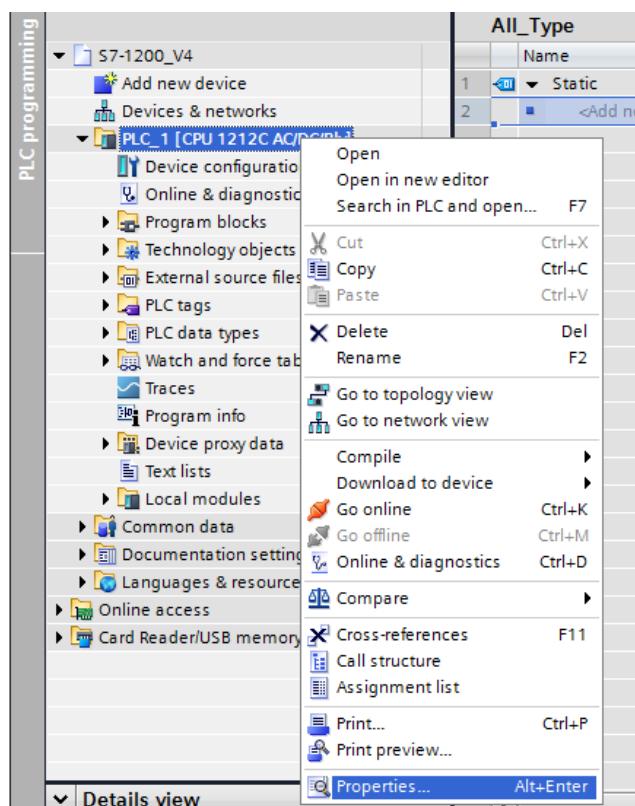

11. Select PLC tag.

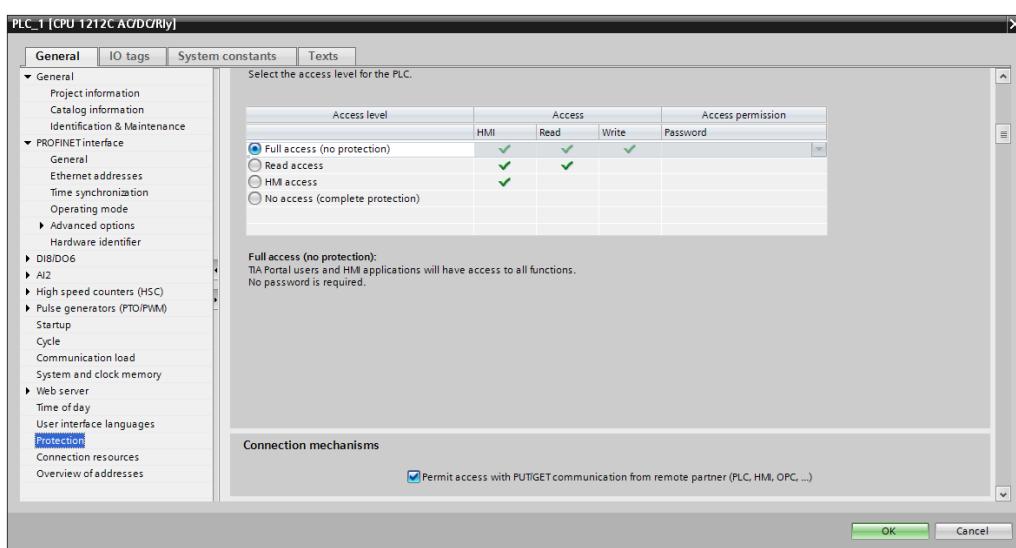

How to Connect With S7-1200 Firmware V4.0

There are certain restrictions in S7-1200 firmware V4.0, therefore, to avoid communication errors, please follow the steps to set up.(EasyBuilder8000 does not support Siemens S7-1200 firmware V4.0 and later versions).

Right click on the PLC program, and then click **[Properties]**.

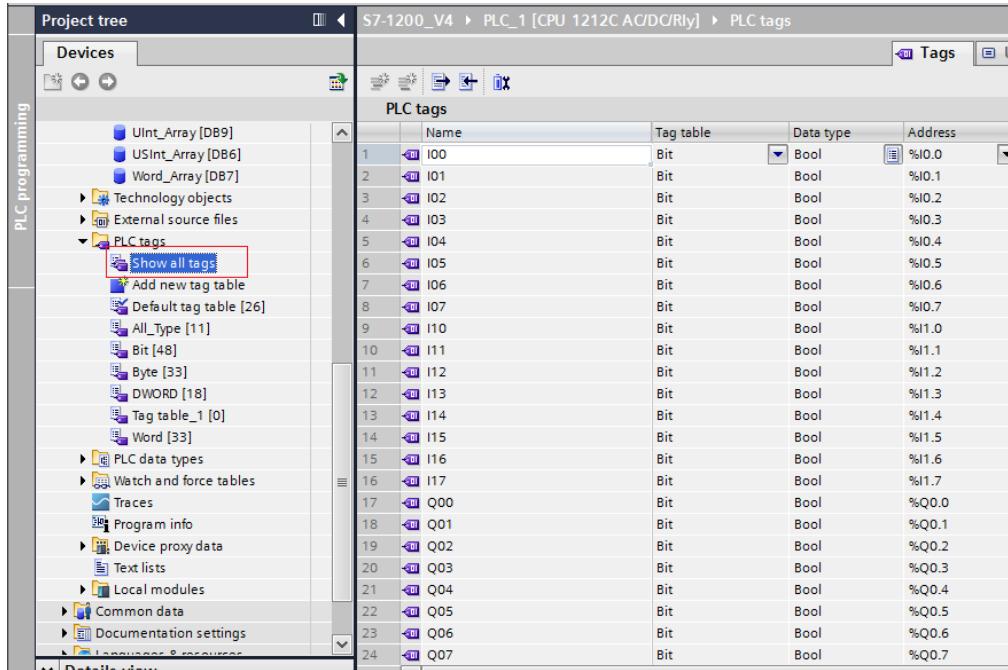

Select **[Protection]**, and then select **[Permit access with PUT/GET communication from remote partner (PLC,HMI,OPC,...)]**.

The following part introduces how to export S7-1200 PLC Tags and Program Blocks.

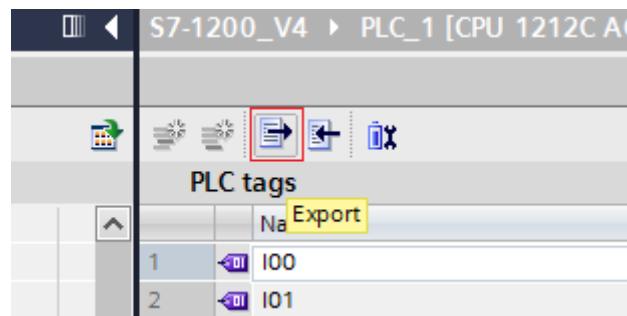

Exporting PLC Tags (I,Q,M tags)

- Under [PLC tags] select [Show all tags].

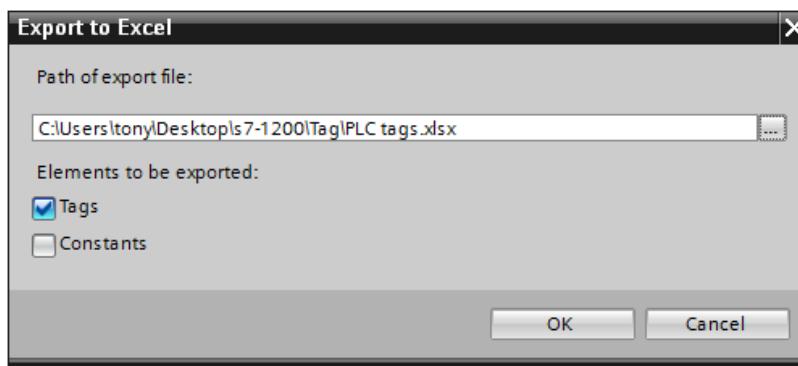

| | Name | Tag table | Data type | Address |
|----|------|-----------|-----------|---------|
| 1 | I00 | Bit | Bool | %IO.0 |
| 2 | I01 | Bit | Bool | %IO.1 |
| 3 | I02 | Bit | Bool | %IO.2 |
| 4 | I03 | Bit | Bool | %IO.3 |
| 5 | I04 | Bit | Bool | %IO.4 |
| 6 | I05 | Bit | Bool | %IO.5 |
| 7 | I06 | Bit | Bool | %IO.6 |
| 8 | I07 | Bit | Bool | %IO.7 |
| 9 | I10 | Bit | Bool | %I1.0 |
| 10 | I11 | Bit | Bool | %I1.1 |
| 11 | I12 | Bit | Bool | %I1.2 |
| 12 | I13 | Bit | Bool | %I1.3 |
| 13 | I14 | Bit | Bool | %I1.4 |
| 14 | I15 | Bit | Bool | %I1.5 |
| 15 | I16 | Bit | Bool | %I1.6 |
| 16 | I17 | Bit | Bool | %I1.7 |
| 17 | Q00 | Bit | Bool | %Q0.0 |
| 18 | Q01 | Bit | Bool | %Q0.1 |
| 19 | Q02 | Bit | Bool | %Q0.2 |
| 20 | Q03 | Bit | Bool | %Q0.3 |
| 21 | Q04 | Bit | Bool | %Q0.4 |
| 22 | Q05 | Bit | Bool | %Q0.5 |
| 23 | Q06 | Bit | Bool | %Q0.6 |
| 24 | Q07 | Bit | Bool | %Q0.7 |

- Click [Export] to export the tags.

- Browse for the directory to save the exported file and then click [OK].

Exporting Program Blocks(DB)

- When the database contains Struct data type, please note the following restrictions.

Please at least add one data member that doesn't belong to Struct data type into DB, otherwise, the data cannot be imported to EasyBuilder.

Multidimensional Arrays and Multilayer Structs are not supported.

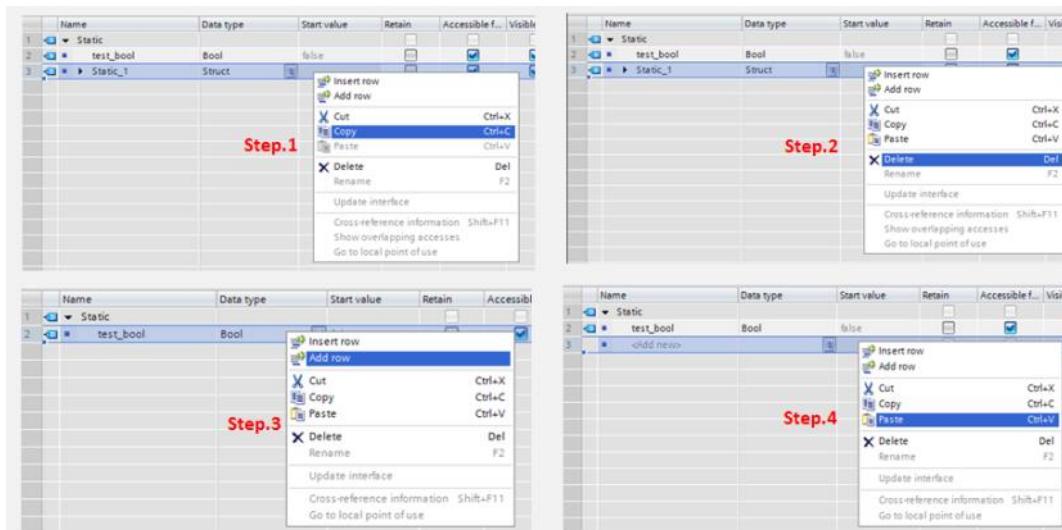

After building DB, please do the following actions for Struct address:

(1) Copy the complete Struct data.

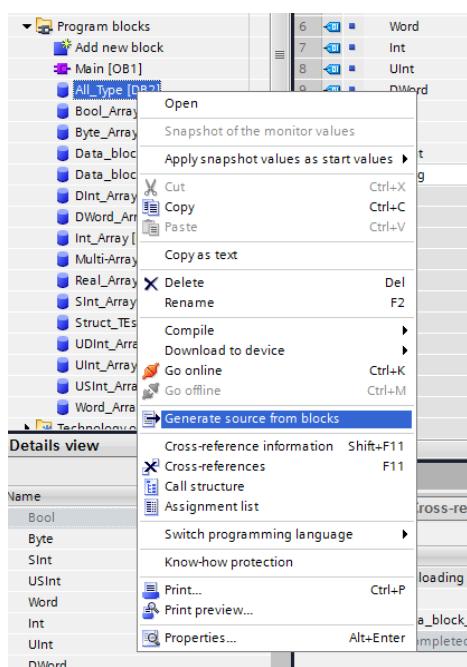

(2) Delete data.

(3) Add a new row.

(4) Paste data.

- Right click on DB, click [**Generate source from blocks**], and then enter the file name to save.

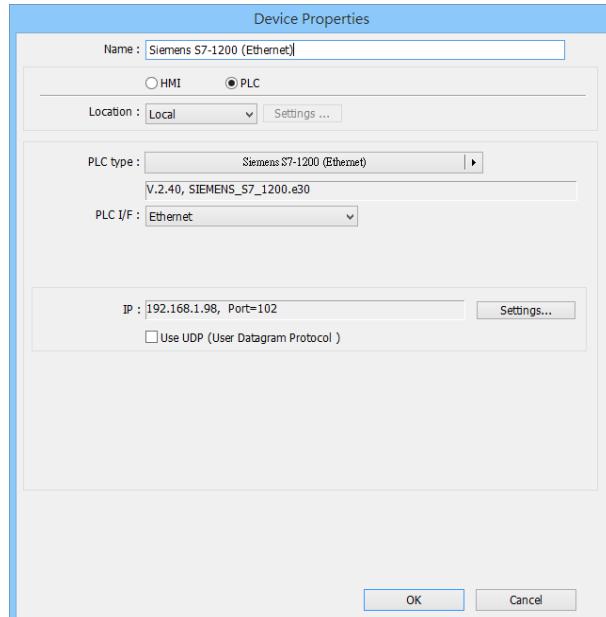

After building and importing PLC Tags and Program Blocks, click [**Download to device**].

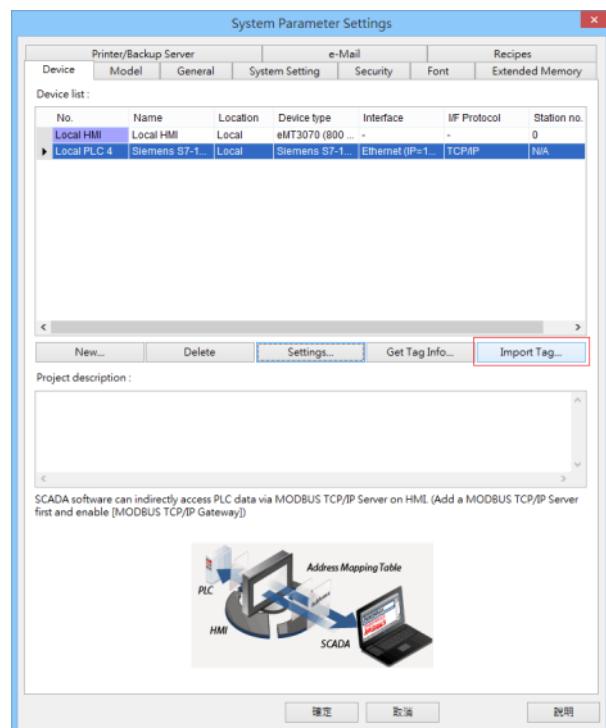

Importing PLC Tags and Program Blocks(DB)

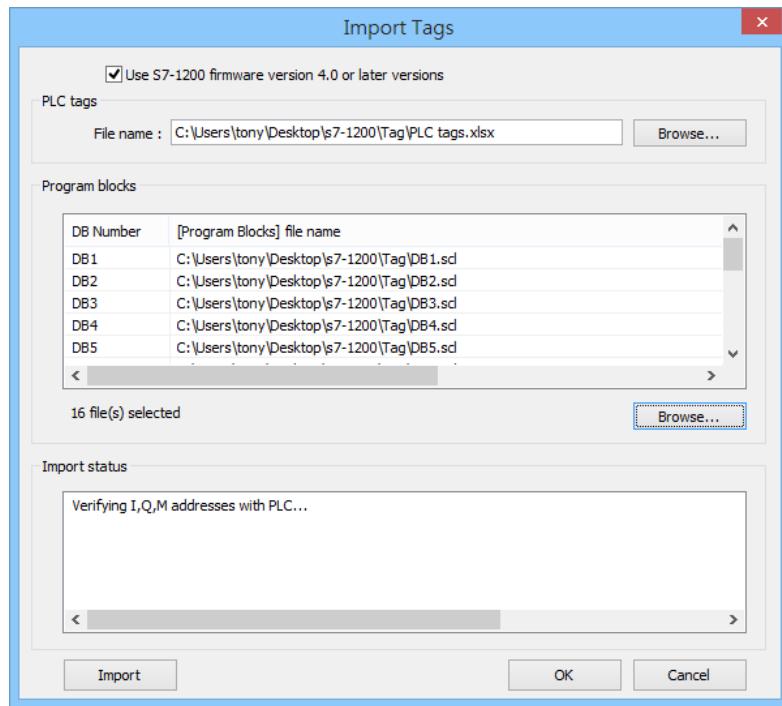

1. Launch EasyBuilder and set the IP address.

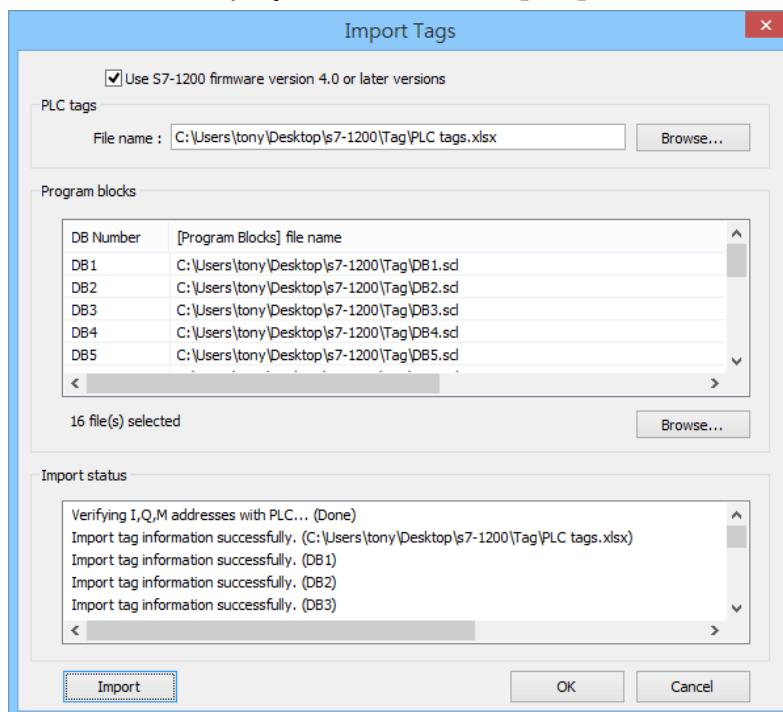

2. Click [**Import Tag...**].

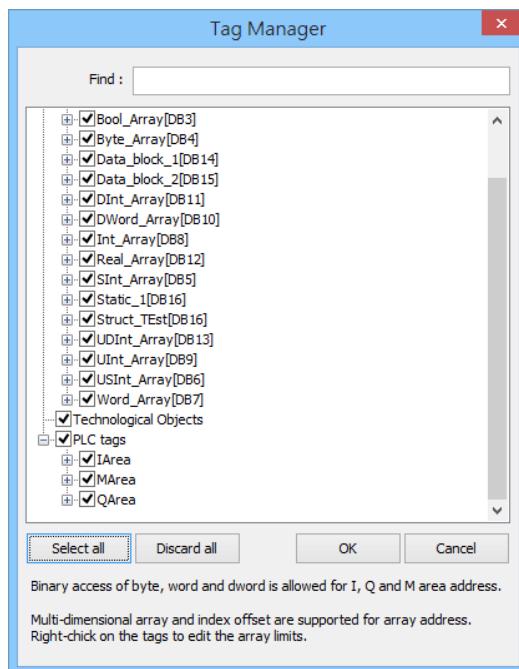

3. Select the PLC Tags and Program Blocks to be imported. Please remember to change DB number, and select **[Use S7-1200 firmware version 4.0 or later versions]**. Click **[Import]** to import the files. The I, Q, and M addresses will be checked, if an error occurs, the communication will fail. If this happens, please check your communication environment, and try to import again.

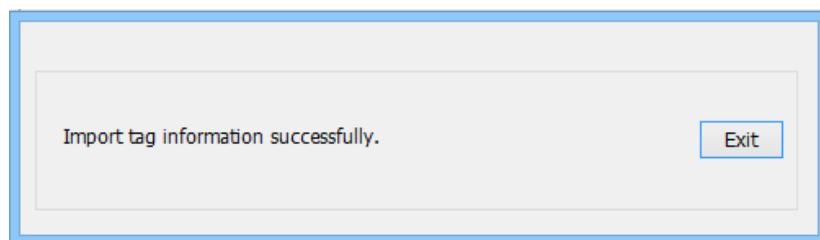

4. The “Import status” field will display the result, click **[OK]**.

5. Select the tags to be imported and then click **[OK]**.

6. The following message is displayed when the import has succeeded.

PLC Setting:

Note: Please follow the settings below, or the communication may fail.

1. Do not check [DB UTILITAIRES] -> [Attributes] -> [Optimized block access]

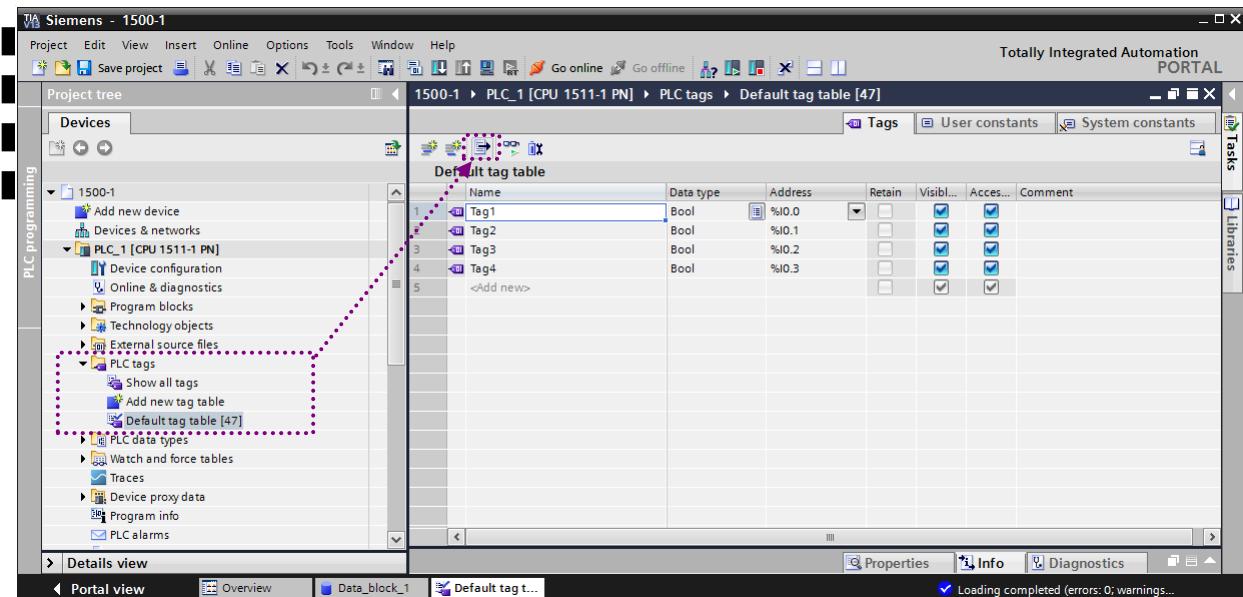

2. Check [General] -> [Protection] -> [Permit access with PUT/GET communication from remote partner]

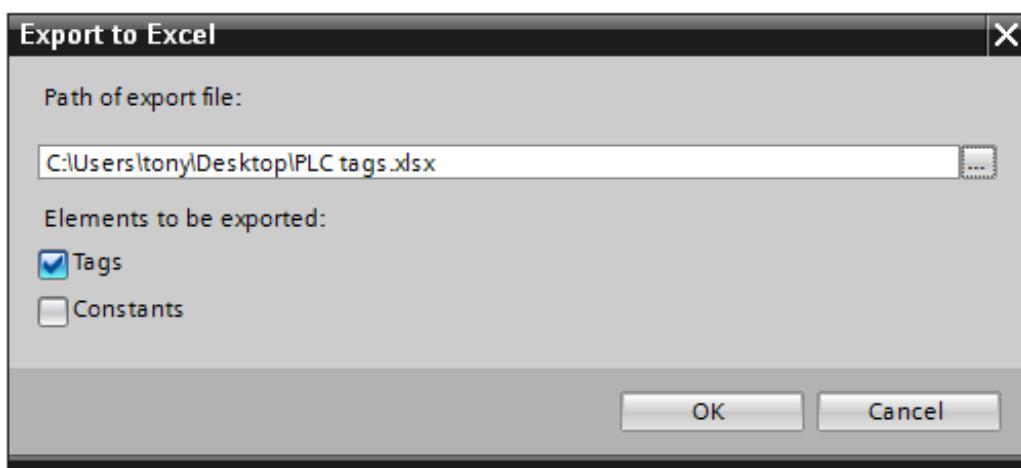

How to import address tags using TIA portal?

1. Exporting PLC Tags (.xlsx file format).

1.1 Under [PLC tags] create the address tags and then click the Export icon.

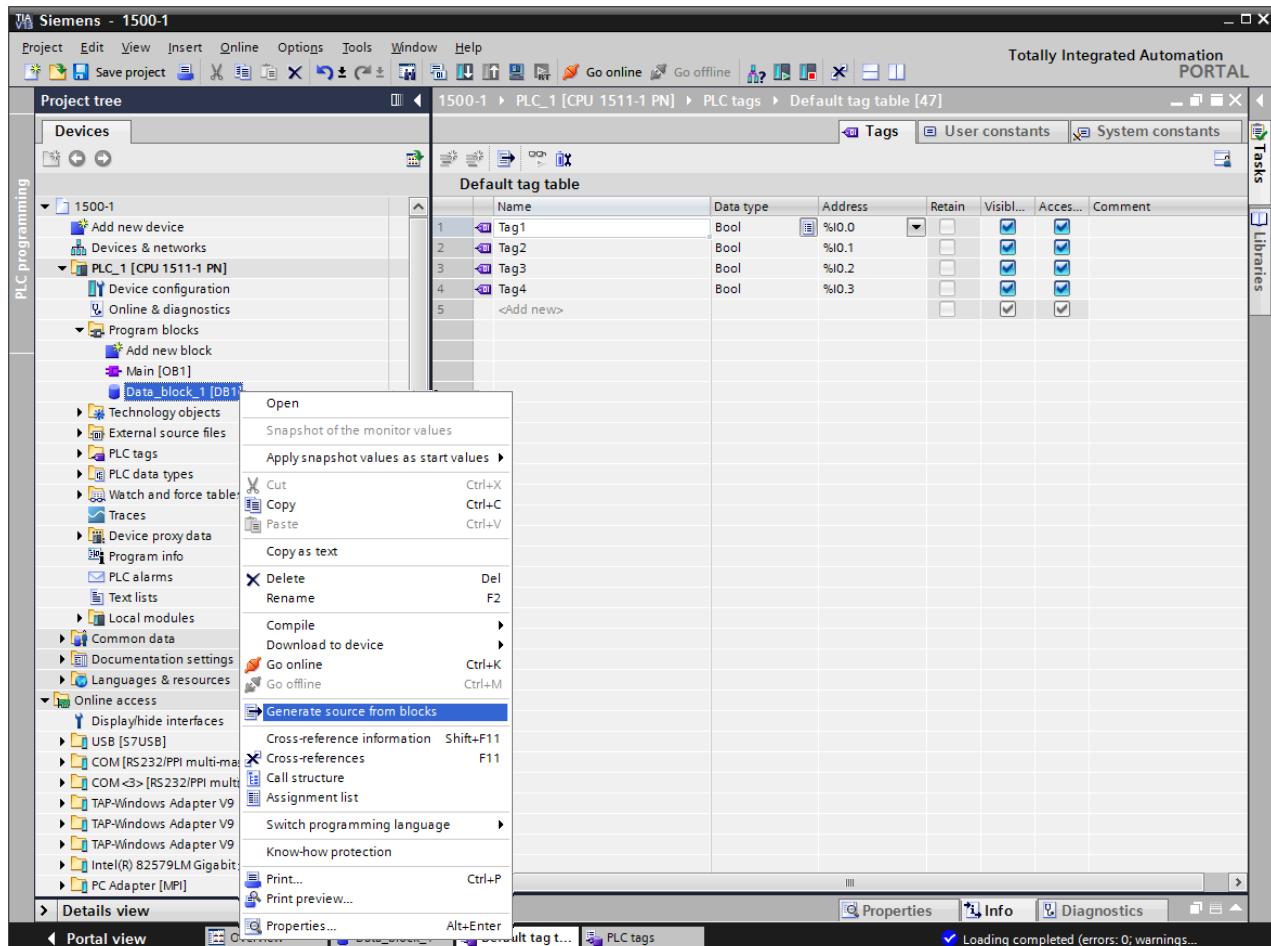

1.2 Designate the directory to save the file and click OK button.

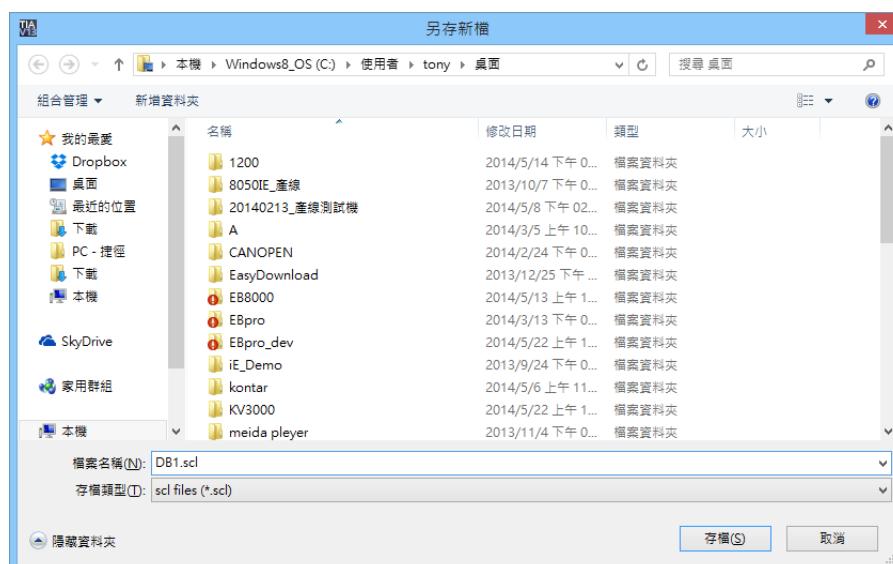

2. Exporting Program Blocks (.scl file format).

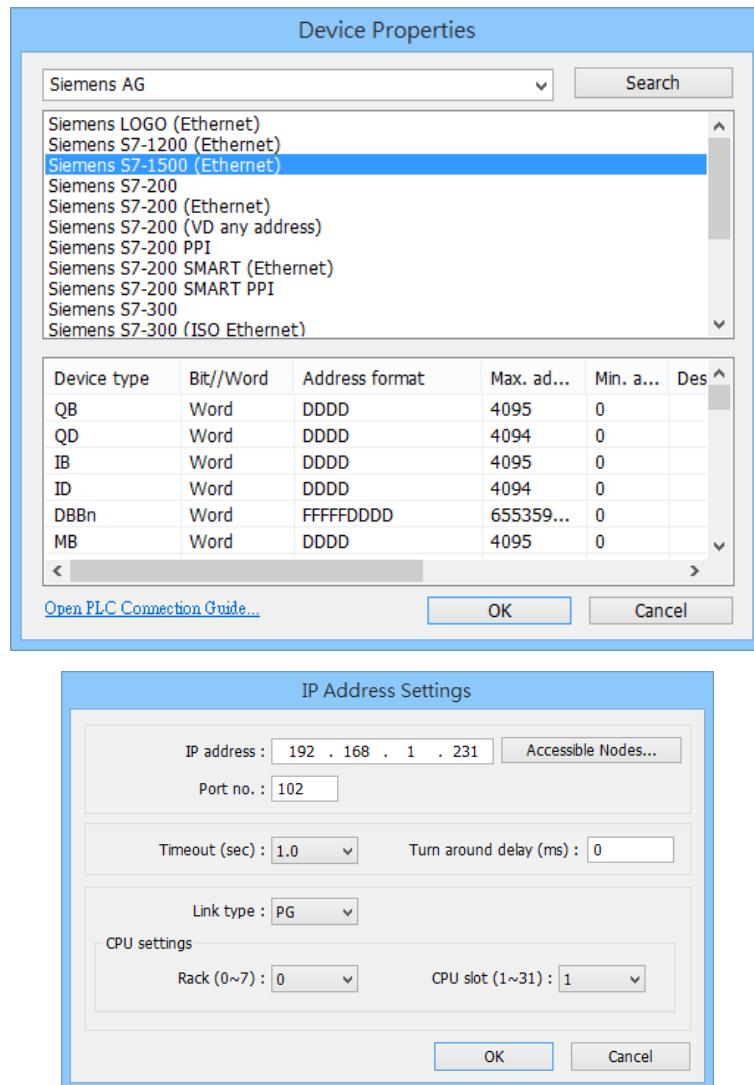

2.1 Under [Program blocks] create “Data_block_1 [DB1]” as shown in the following figure.
 Click the right mouse button on [DB1] and then click [Generate source from blocks].

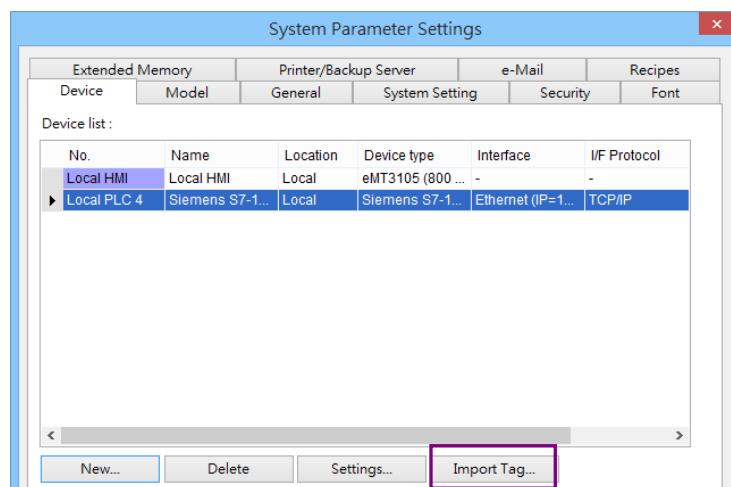

2.2 Designate the directory to save the file.

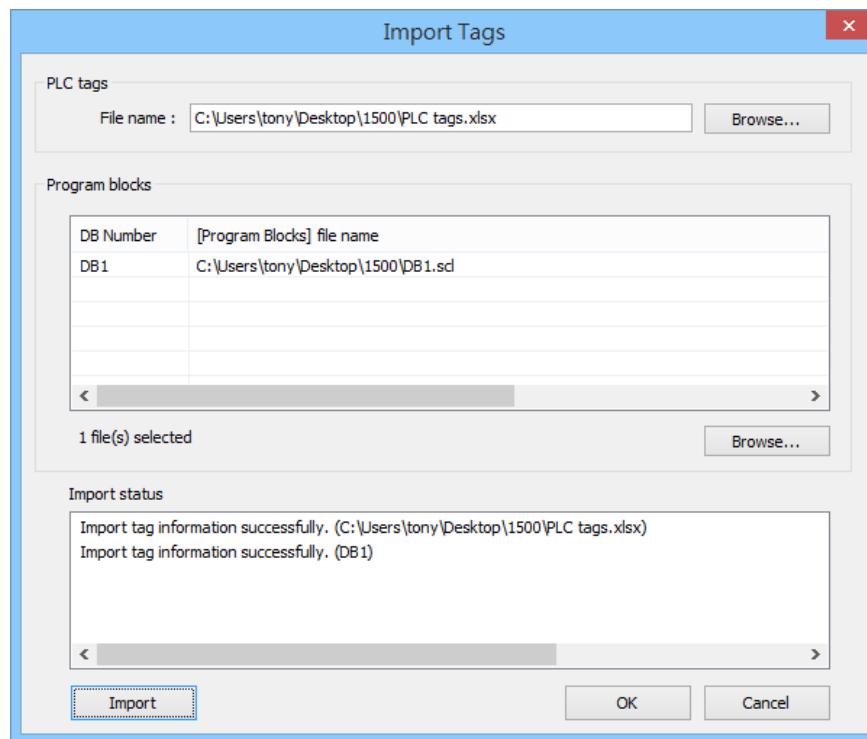

3. In EasyBuilder click [New PLC...], select *Siemens S7-1500 (Ethernet)* PLC type, and then click [Settings...] to set the parameters.

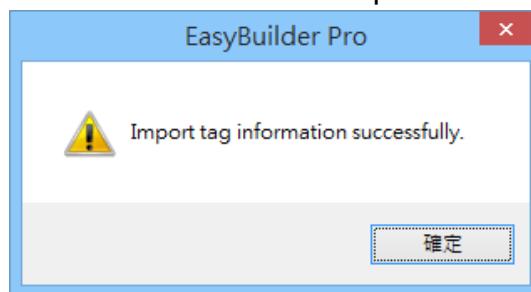

4. Click [**Import Tag...**] button.

5. Select the PLC Tags and Program Blocks to be imported, click [Import] button, and then click [OK] to leave when the tags are imported successfully.

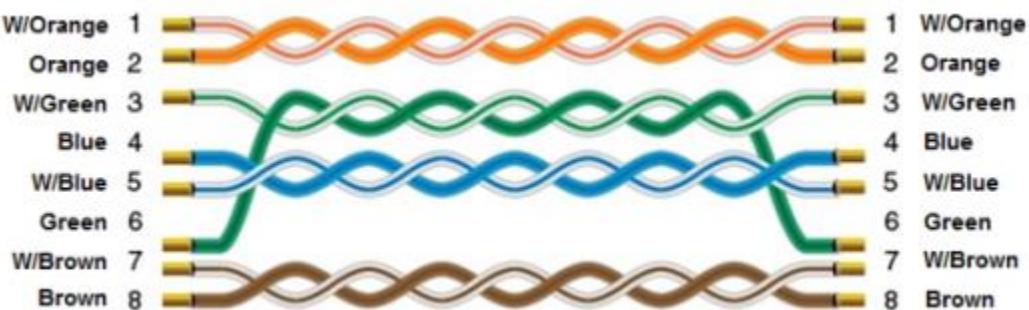

6. The following message window is shown if the import has succeeded.

How to Import Tag:

The tags created in the Symbol Table in Step7-MicroWIN software can be imported to EasyBuilder.

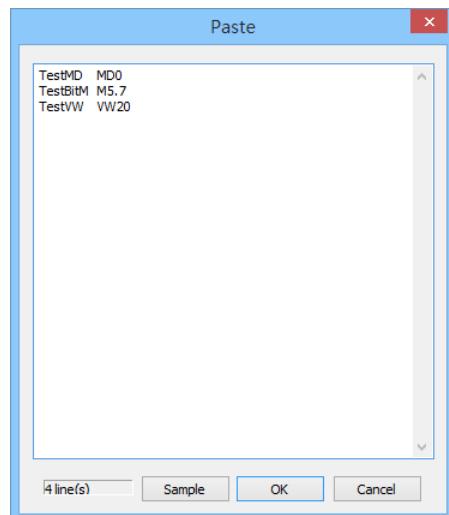

1. In **Symbol Table** create the tags. Select all the tags and click the right mouse button then **copy** the tags.

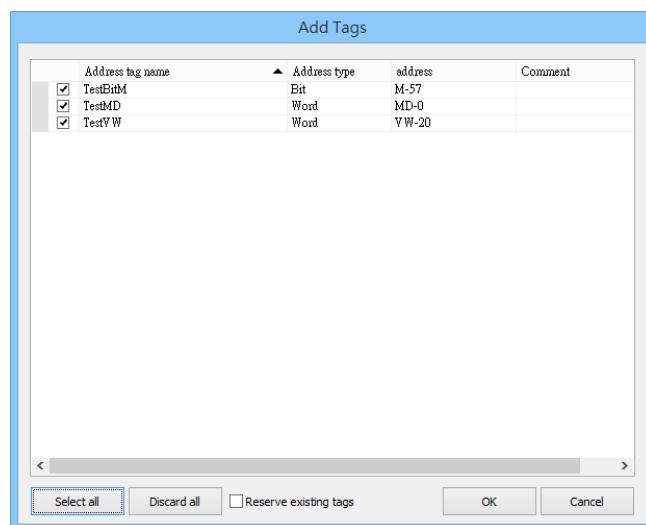

2. Launch EasyBuilder, add the driver in the device list in **System Parameter Settings**, and then click **Import Tag** button.

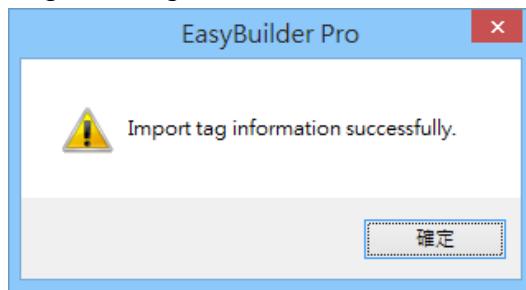

3. Paste the tags copied in step 1 and then click **OK**.

4. Select all the tags and then click **OK**.

5. If succeeded, the following message window shows.

PLC Setting:

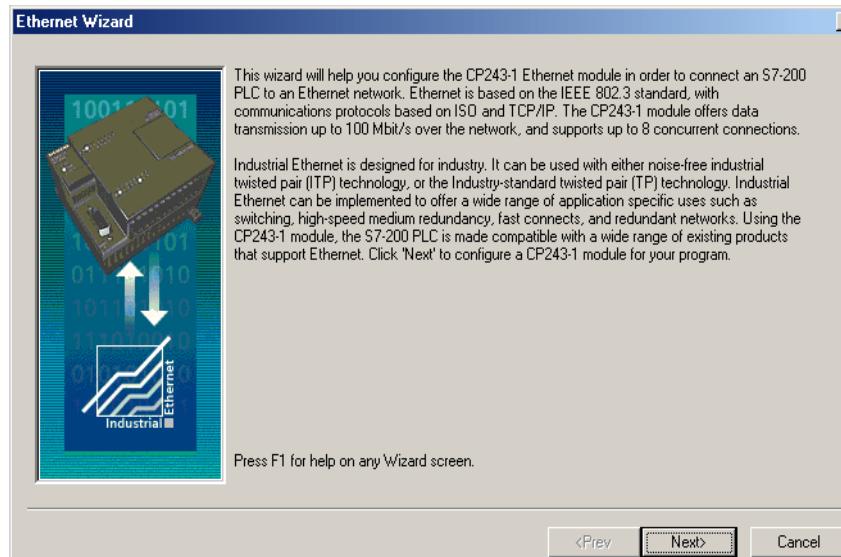

S7/200 Ethernet Multi-Connection Settings

Step 1: Launching the Ethernet Wizard

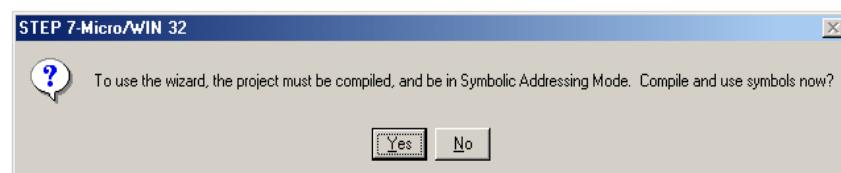

1. In the Micro/WIN main menu, click **Tools / Ethernet Wizard**.

2. Then, click **Next.**

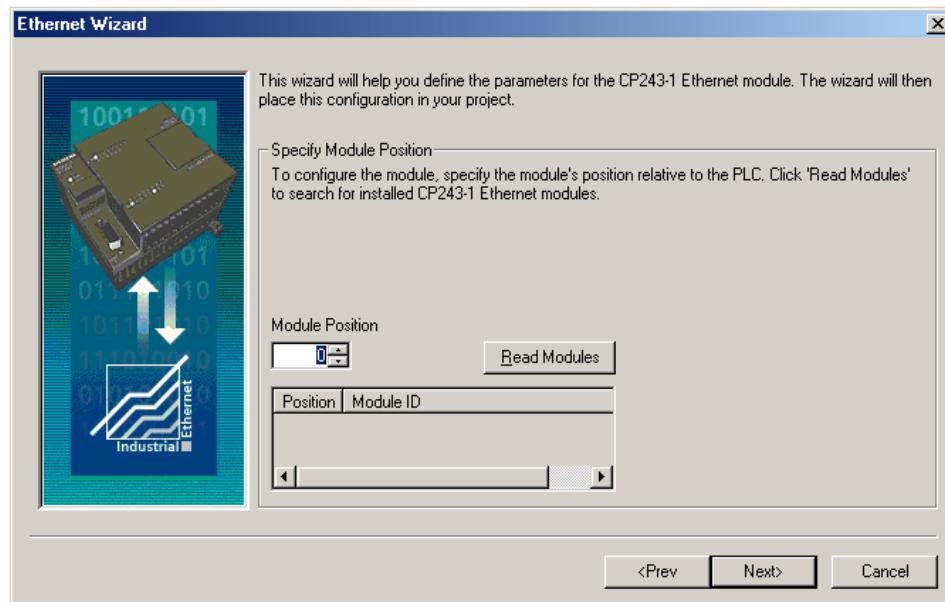

3. Click **Yes to proceed.**

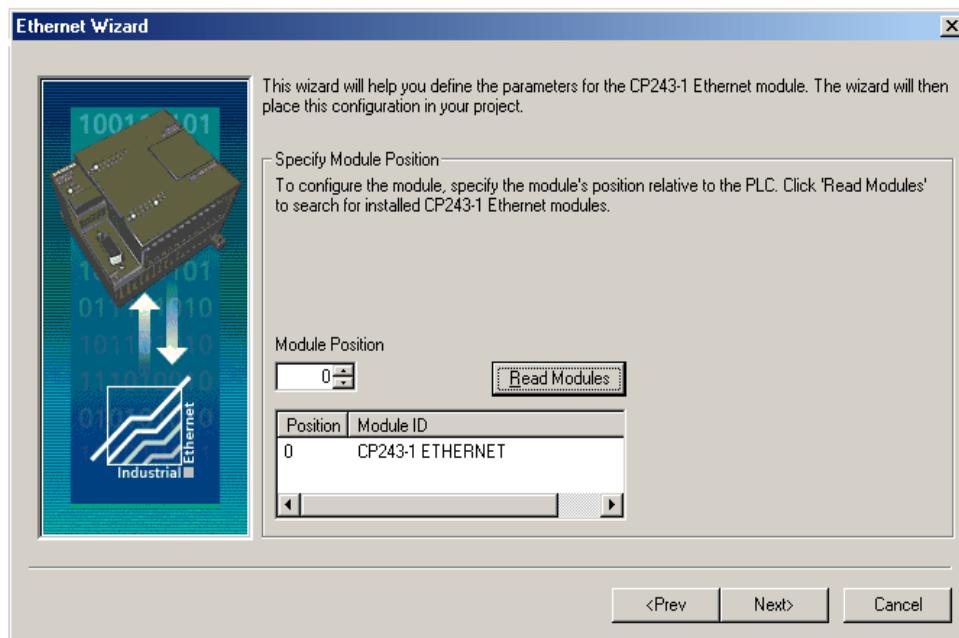

Step 2: Setting CP243-1 Module Position

1. Click **Read Modules.**

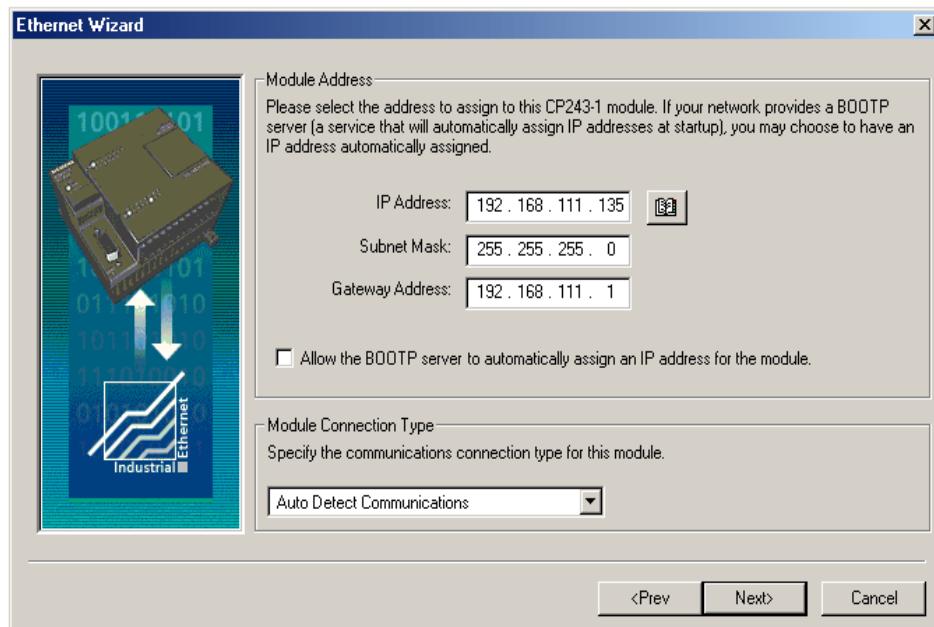

2. To view the results of Read Modules, select the **Ethernet module**. Click **Next**.

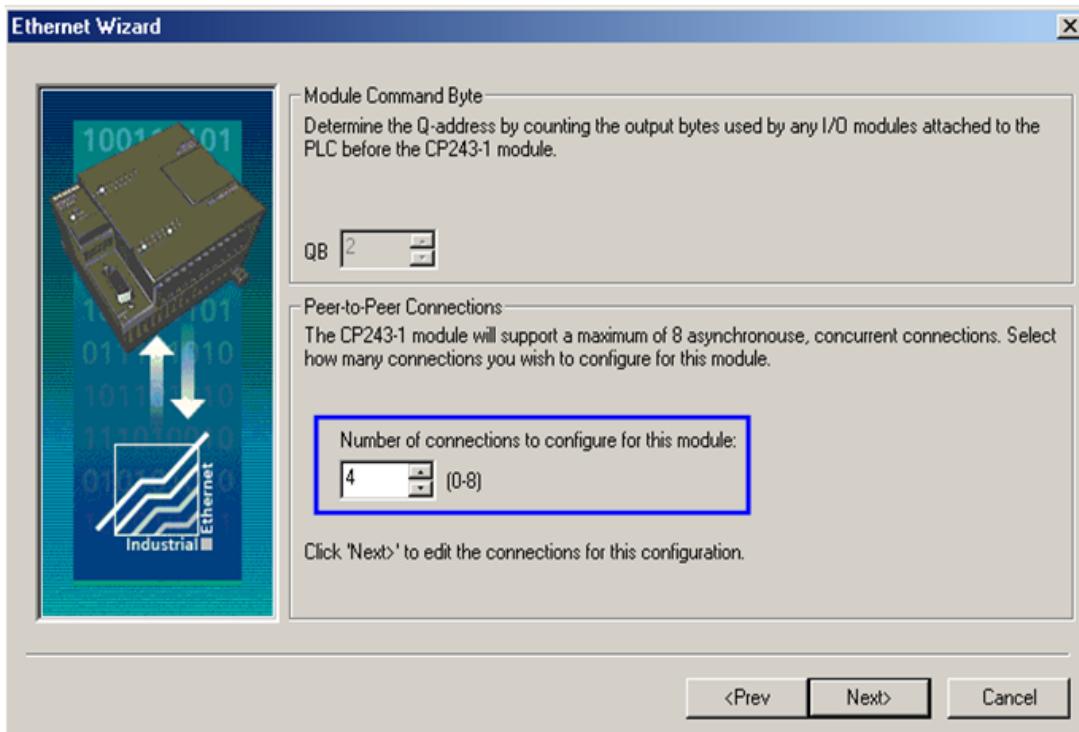

Step 3: Assigning Module Address

1. Click **Next**.

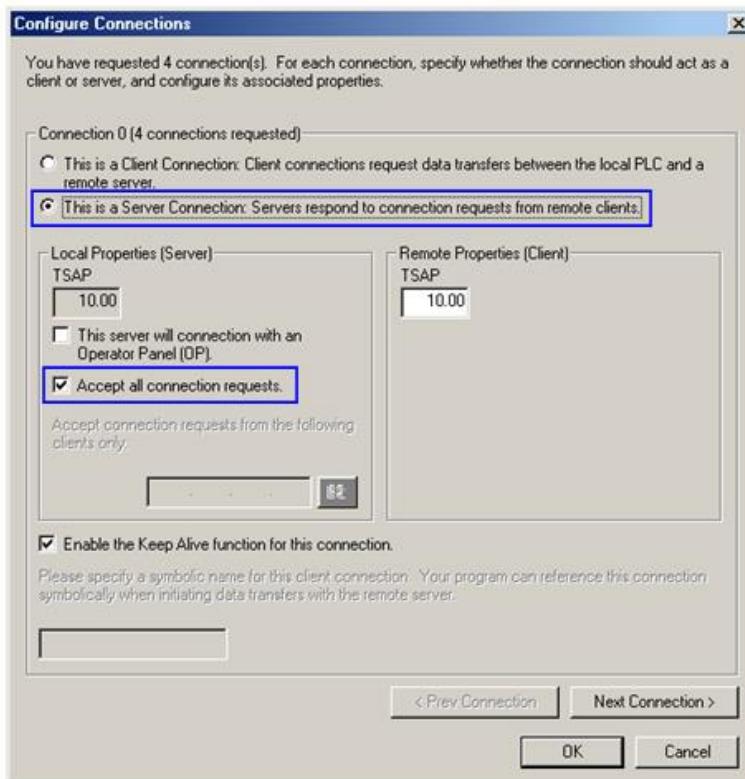

2. Enter the number of desired available connections for this device. If 0 is entered, the only connection available will be the PG mode. The image below shows there are 4 connections for this module.

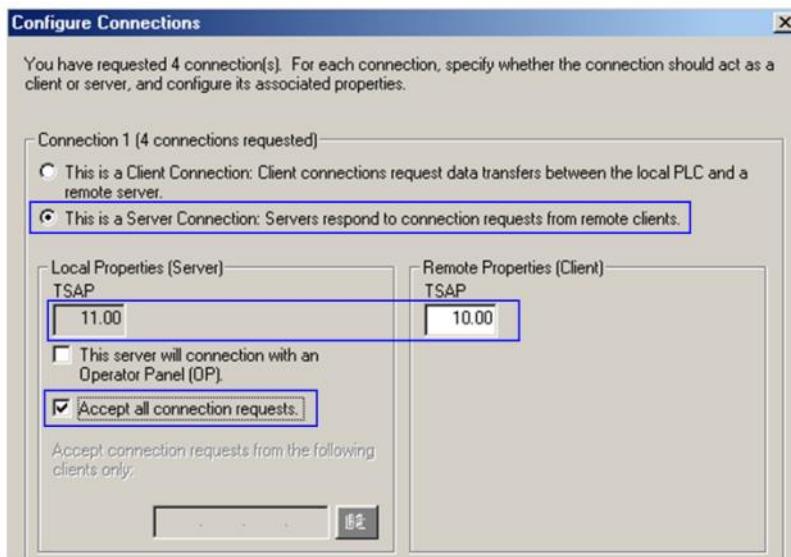

3. Connection0 -> Select **This is a Server Connection....**

Notice the **Local TSAP** automatically incremented to **10.00**.

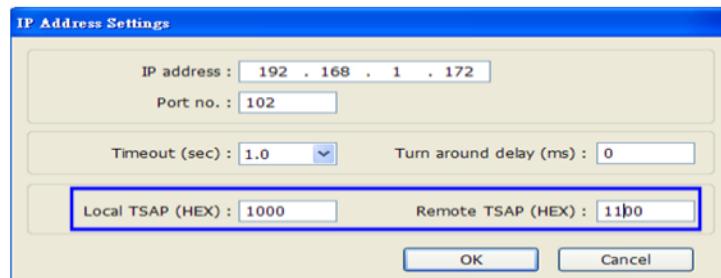

4. Connection1 , Select This is a Server Connection....

Notice the **Local TSAP** automatically incremented to **11.00**.

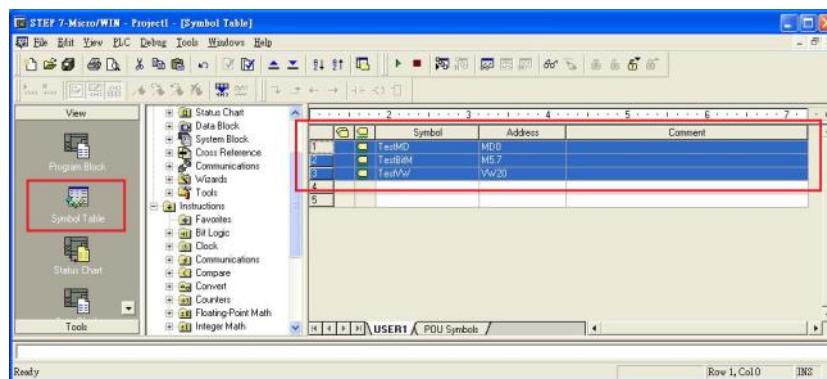

5. Upon completion of the settings above, set parameters in EasyBuilder. Set the value of Local TSAP here to the value of Remote TSAP in Micro/WIN and vice versa to realize multi-connection.

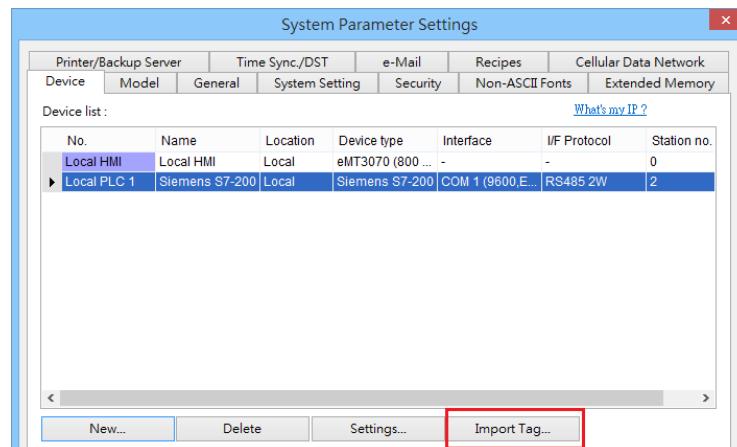

How to Import Tag:

The tags created in the Symbol Table in Step7-MicroWIN software can be imported to EasyBuilder.

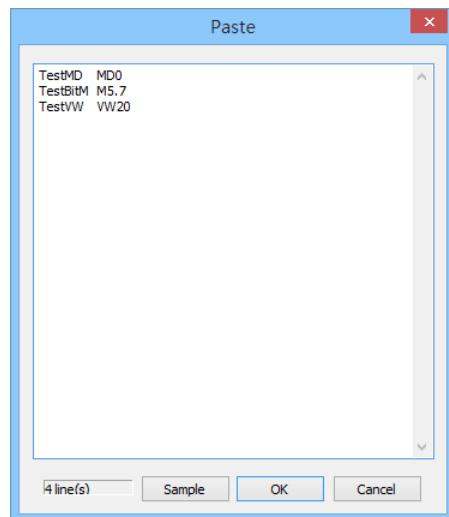

1. In **Symbol Table** create the tags. Select all the tags and click the right mouse button then **copy** the tags.

How to Import Tag:

The tags created in the Symbol Table in Step7-MicroWIN software can be imported to EasyBuilder.

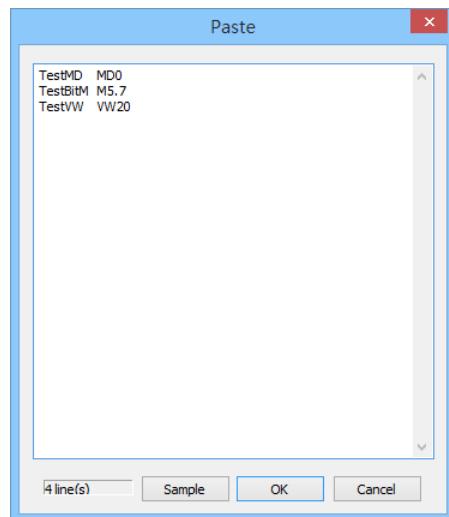

1. In **Symbol Table** create the tags. Select all the tags and click the right mouse button then **copy** the tags.

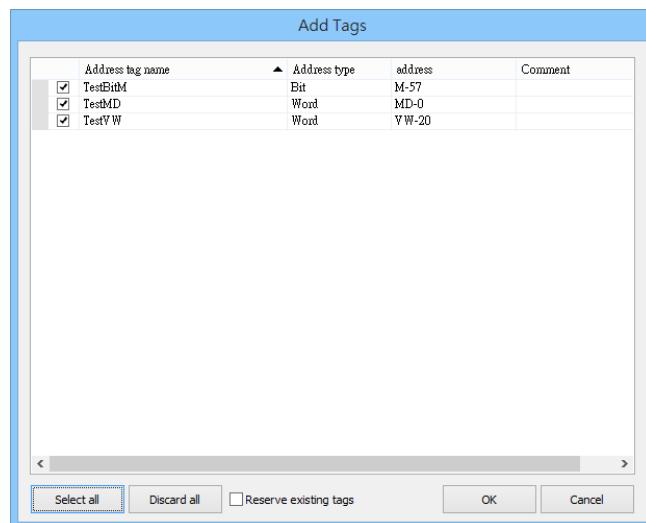

2. Launch EasyBuilder, add the driver in the device list in **System Parameter Settings**, and then click **Import Tag** button.

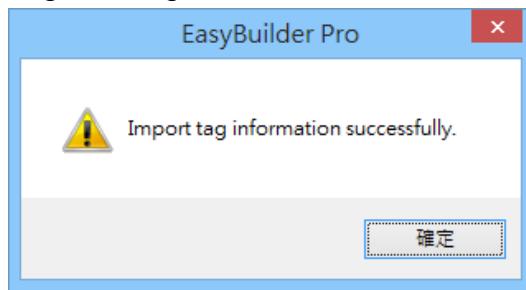

3. Paste the tags copied in step 1 and then click **OK**.

4. Select all the tags and then click **OK**.

5. If succeeded, the following message window shows.

Multi-HMIs-Multi-PLCs Communication Setting:

For S7-200 PLC, Multi-HMIs-Multi-PLCs communication can be achieved using S7/200 PPI driver, please refer to the settings below.

IN EasyBuilder COM Port Settings, two important parameters must be set:

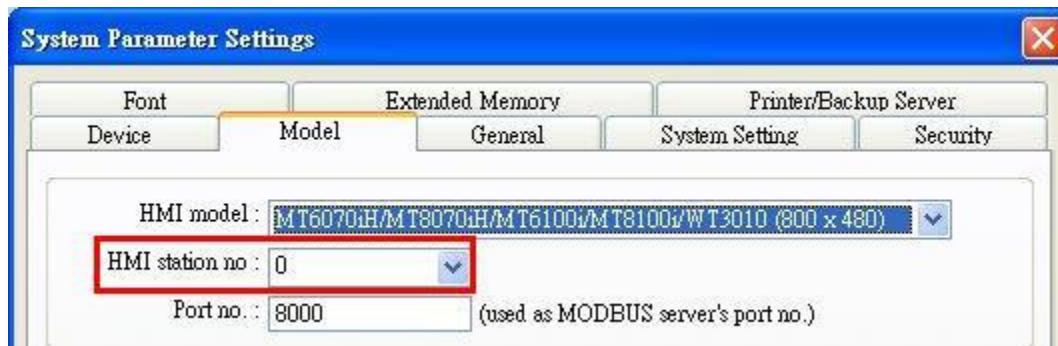

3. [High station address (HSA)]:

Setting Max. Station Number of HMI in PPI network.

For the effectiveness of system operation, it is highly recommended that the HMI station number starts from zero and go on sequentially. If there are 4 HMI in PPI network, set station no. from 0~3, and [High station address (HSA)] to 3.

Set HMI station number in [System Parameters] / [Model] / [HMI station no.]:

4. [Gap update factor(GUF)]:

The condition to pass a Token. In PPI network only HMI can hold a Token, PLC can only be controlled.

When the HMI that holds Token communicates with PLC for a number of times that equals to the value set here, HMI will pass the Token (control of PLC) to the next HMI. For example, if GUF is set to "1", HMI will pass the control of PLC to the next HMI when read or write the value in an address.

If GUF is set to a bigger value, the HMI that holds Token will control the PLC for a longer time and therefore the Token won't be passed to another HMI and cause failure in communicating with PLC.

A complete communication means HMI reads / writes PLC value for one time.

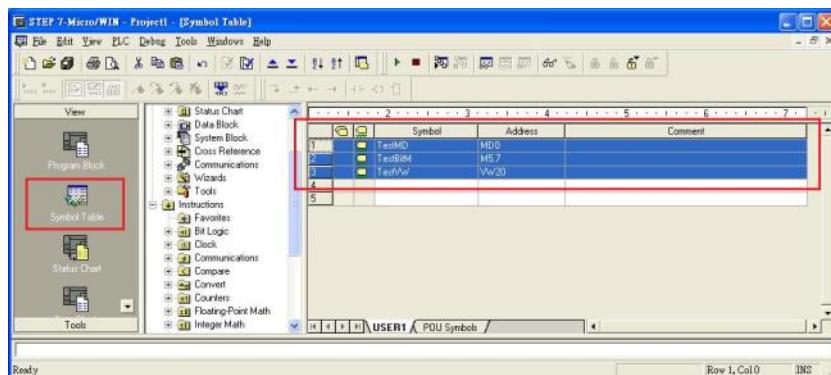

Note:

- HMI sta. no. can not be the same as PLC sta. no.
- Highly recommended that HMI sta. no. starts from 0 and go on sequentially for the effectiveness of operation.
- Available for EasyBuilder V4.50 and later.

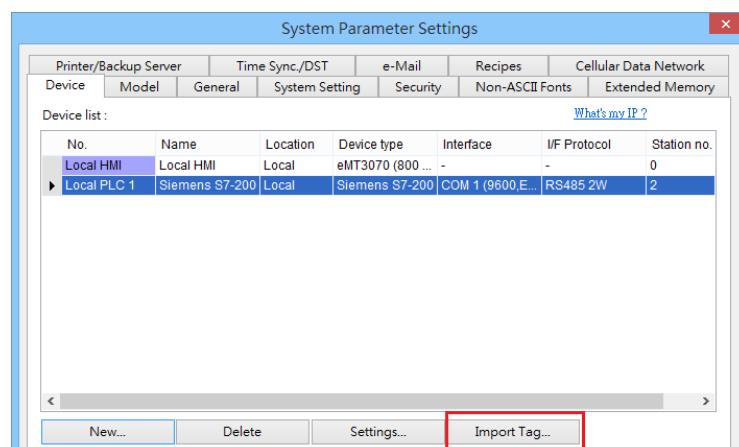

How to Import Tag:

The tags created in the Symbol Table in Step7-MicroWIN software can be imported to EasyBuilder.

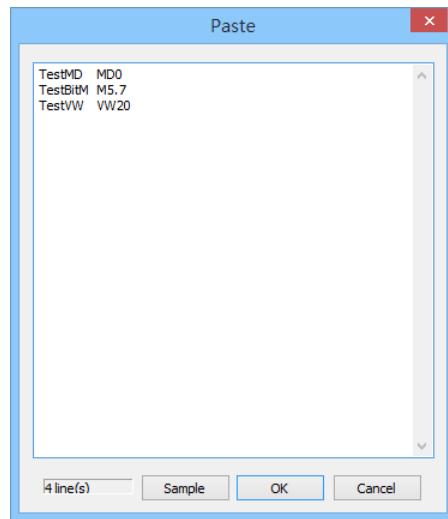

1. In **Symbol Table** create the tags. Select all the tags and click the right mouse button then **copy** the tags.

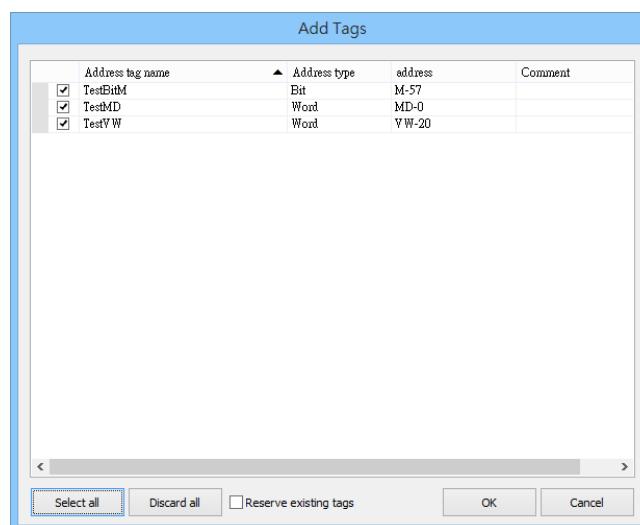

2. Launch EasyBuilder, add the driver in the device list in **System Parameter Settings**, and then click **Import Tag** button.

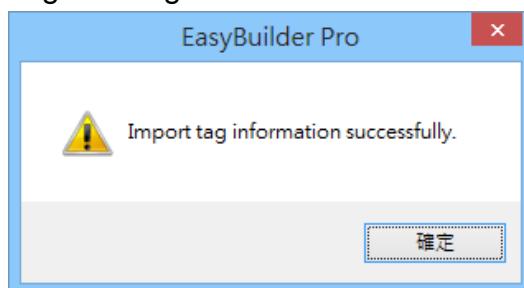

3. Paste the tags copied in step 1 and then click **OK**.

4. Select all the tags and then click **OK**.

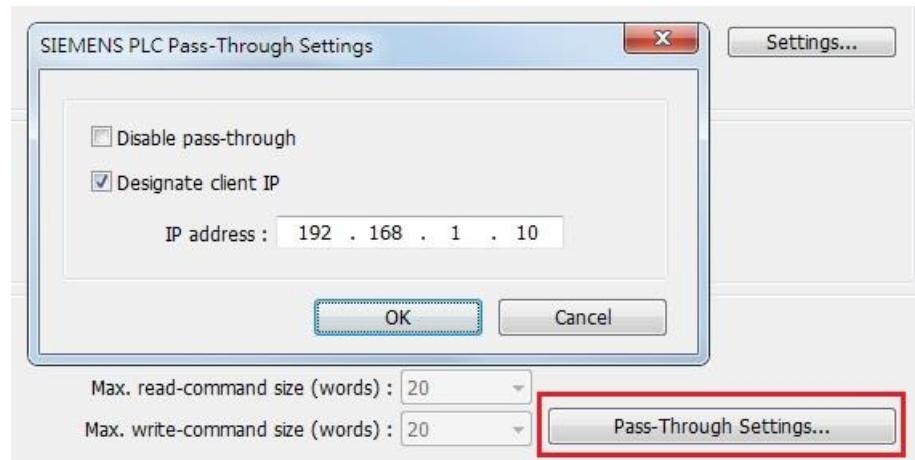

5. If succeeded, the following message window shows.

Pass-Through Settings:

[Designate client IP]: In Pass-through mode designate the client IP address to connect HMI. The “client” usually refers to Siemens Step 7 application.

The following lists the system registers relevant to Siemens S7-200 PPI and Siemens S7-300 MPI Pass-through feature.

- [LW-10850: disable/enable (0 : disable, 1 : normal, 2 : IP limited) (siemens pass-through)]
- [LW-10851: destination COM port (siemens pass-through)]: Generally refers to the COM port connected with PLC.
- [LW-10852: destination PLC station no. (siemens pass-through)]
- [LW-10853: communication protocol (0 : invalid, 1 : PPI, 2 : MPI) (siemens pass-through)]
- [LW-10854 to LW-10857: IP of connecting client (siemens pass-through)]: Displays current client IP address connected with HMI.
- [LW-10858 to LW-10861: IP of designated client (siemens pass-through)]: If LW-10850 is set to 1, the system registers can be used to designate the client IP connected with HMI.
- [LW-10862: connection status (0 : ready, 1 : client connecting) (siemens pass-through)]
- [LW-10863: execution status (0 : normal, 1 : error) (siemens pass-through)]
- [LW-10864: the last error (siemens pass-through)]

The following table lists the error codes, the description of each code, and the possible reason.

| Error Code | Description | Possible Reason |
|------------|-------------------------------------|--|
| 0 | Successfully executed | |
| 1 | Prohibit client from connecting HMI | HMI is already running pass-through and won't accept any request from other client. |
| 2 | Prohibit client from connecting HMI | When LW-10850 is set to 1, the client IP for connecting HMI is different from the IP specified in LW-10858 ~ LW-10861. |
| 3 | Invalid communication protocol | Invalid setting in LW-10853. |
| 4 | Invalid PLC station number | The PLC station number specified in LW-10852 does not exist. |
| 5 | Delayed communication | PLC connection failure. |
| 6 | Busy communication | PLC does not accept pass-through request, please confirm PLC settings. |
| 7 | Invalid pass-through request | Environment setup failure. |

How to Import Tag:

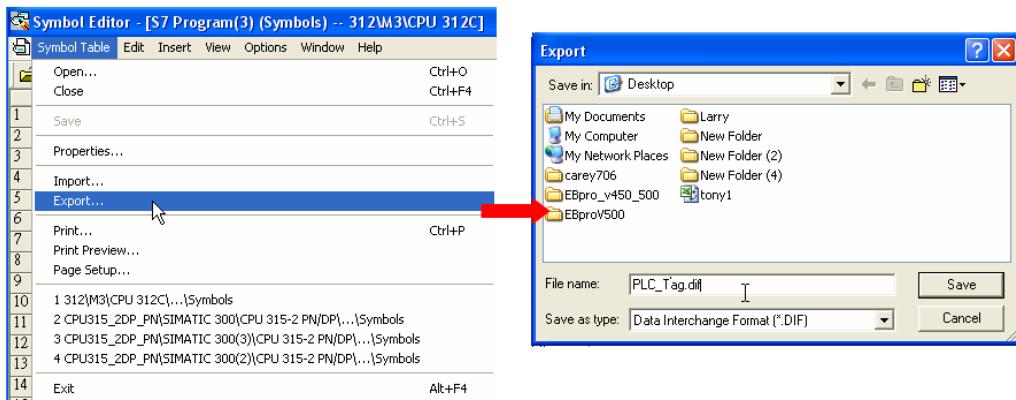

SIEMENS STEP 7 program allows building files of user-defined tag (*.dif file and *.AWL file), and import these files in EasyBuilder8000/EasyBuilderPro -> System Parameter Settings. The following describes how to build and import these two types of files.

1. Building *.dif File

- a、 In “Symbols” create user-defined tag.

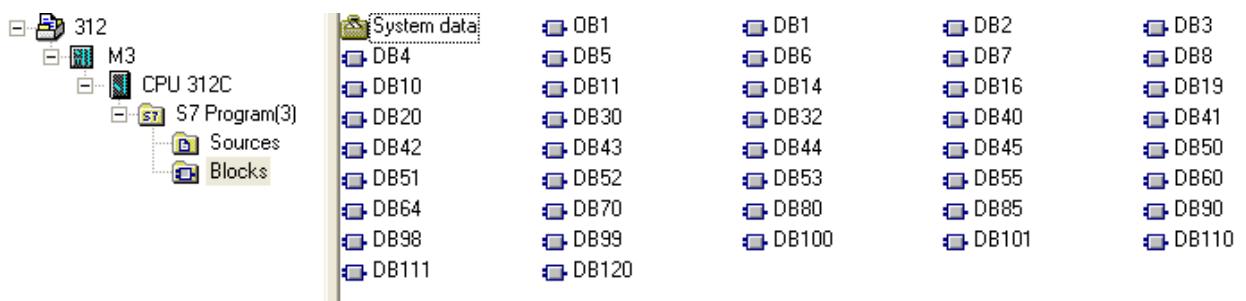

b、 Click **Export** to export the edited file and click **Save**.

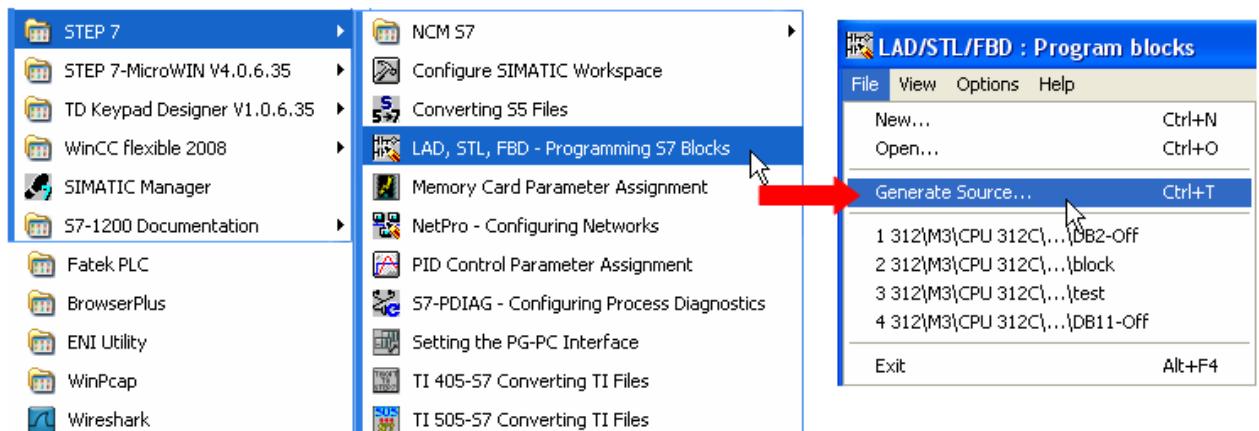

2. Building *.AWF File

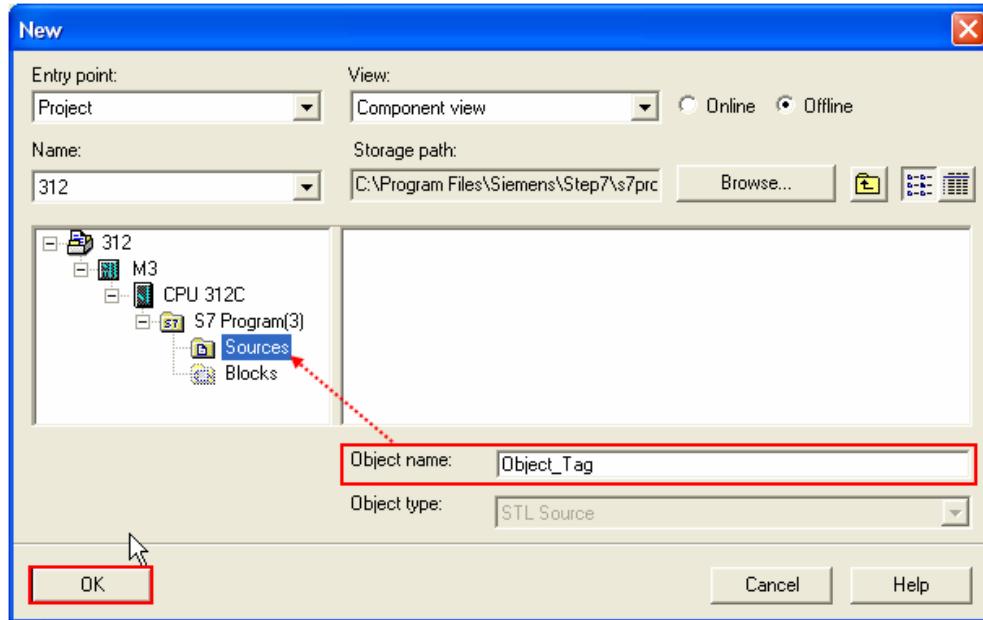

a、 In **Blocks** create items as shown below:

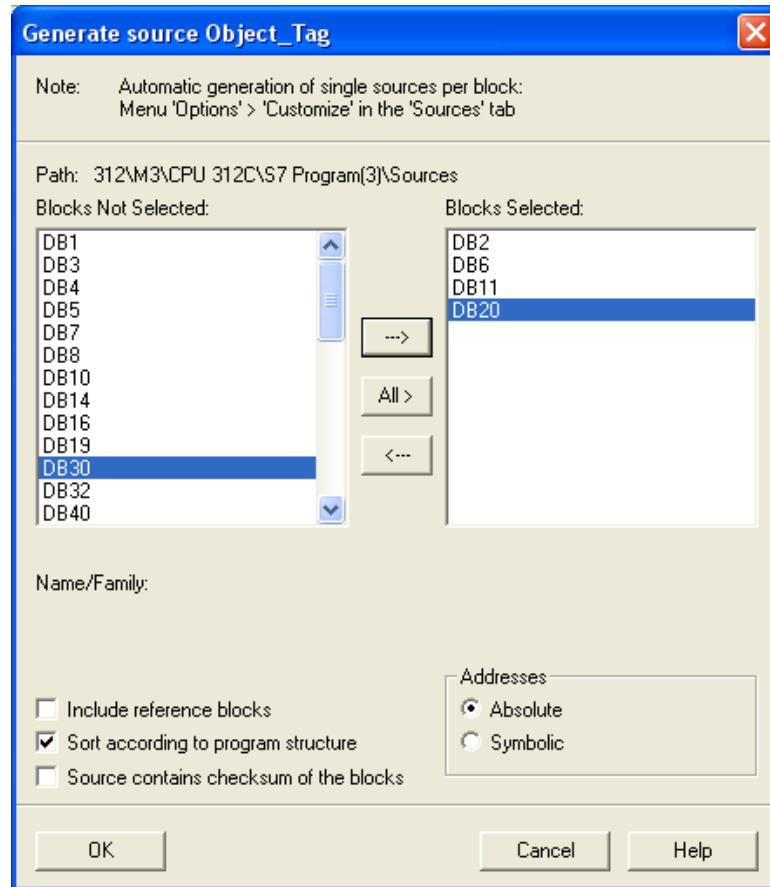

b、 Open **LAD/STL, FBD – Programming S7 Blocks**, click **File -> Generate Source**.

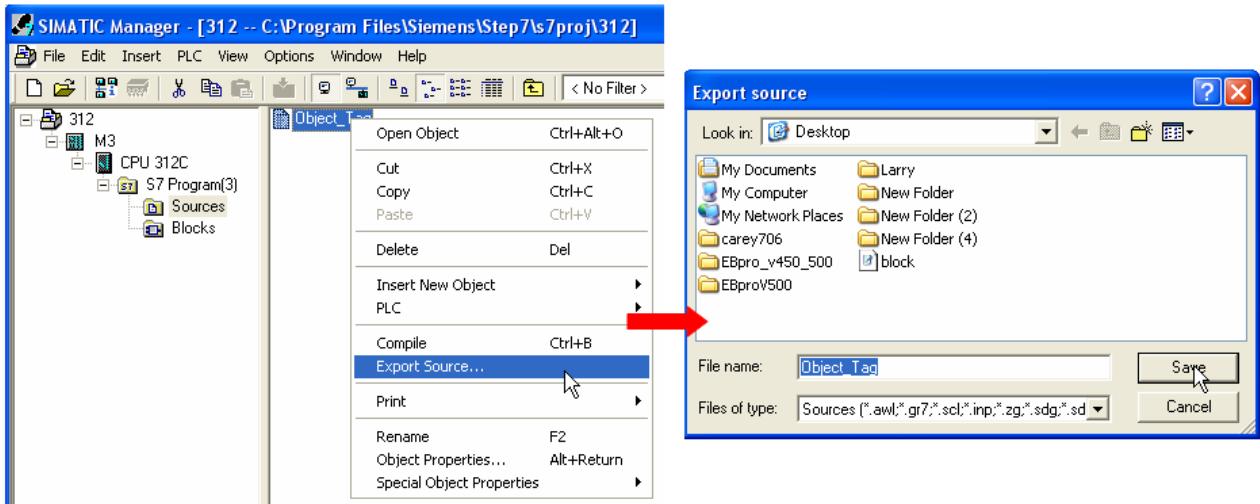

c、Select **Sources** as storage path, specify the file name then click **OK**.

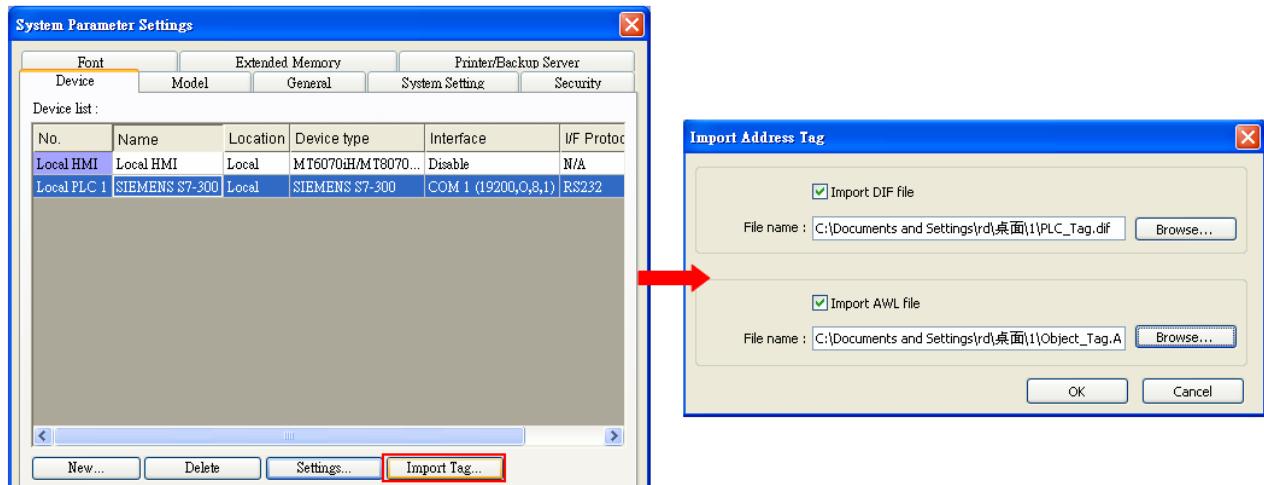

d、Select the objects to be exported then click **OK**.

- e、Under **Sources** there will be names of the saved files, select **Export Source** to build *.AWL file.

The generated *.dif and *.AWL files can be imported in EasyBuilder8000/EasyBuilderPro System Parameter Settings, by clicking Import Tag.

Tag information successfully imported.

Multi-HMIs-Multi-PLCs Communication Setting:

For SIEMENS S7-300 MPI driver in Multi-HMIs-Multi-PLCs communication, [Max. station no. (MPI network)] parameter must be correctly set. This setting is relevant to the station no. of the devices, as shown, two HMI (station no. 0, 1) and two PLC (station no. 2, 3) are in MPI network, Max. Station No. should be set to 3.

For the effectiveness of communication, users may set PLC device in STEP 7 as shown below. In Properties MPI / Network Settings, set Highest MPI address to the number closest to the actual device station number.

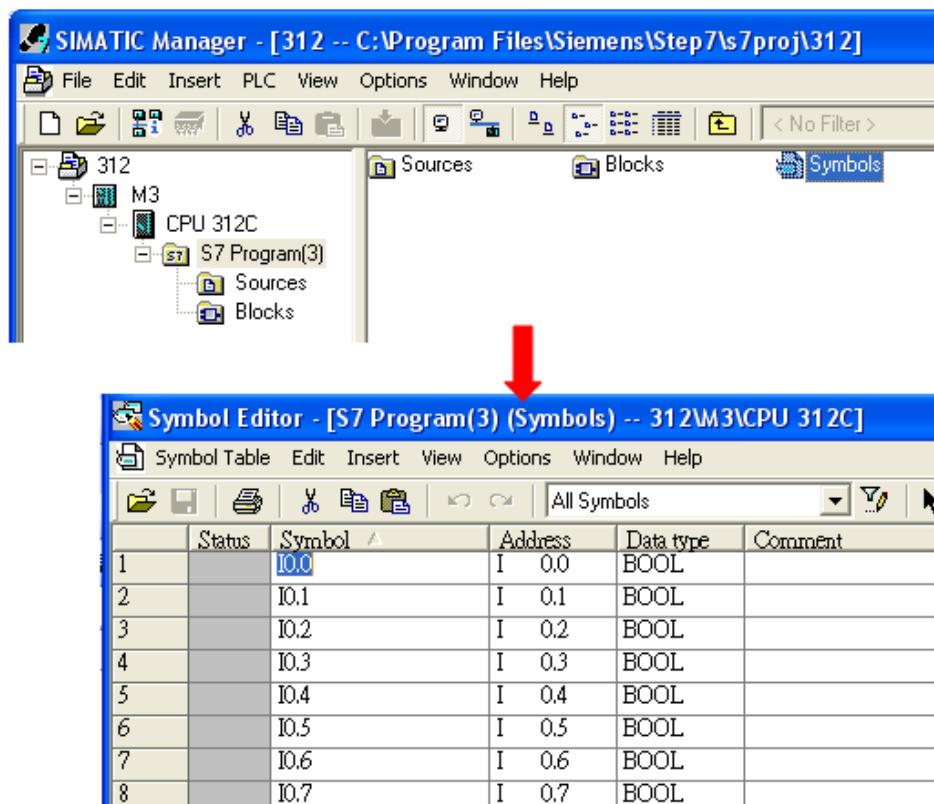

- HMI sta. no. can not be the same as PLC sta. no.
- Highly recommended that the device station numbers start from 0 sequentially and correctly set [Max. station no. (MPI network)].
- Available for EasyBuilder V4.50 and later.
- X Series does not support multiple-HMI-to-multiple-PLC communication, and supports only 1-HMI-to-1-PLC communication.

How to Import Tag:

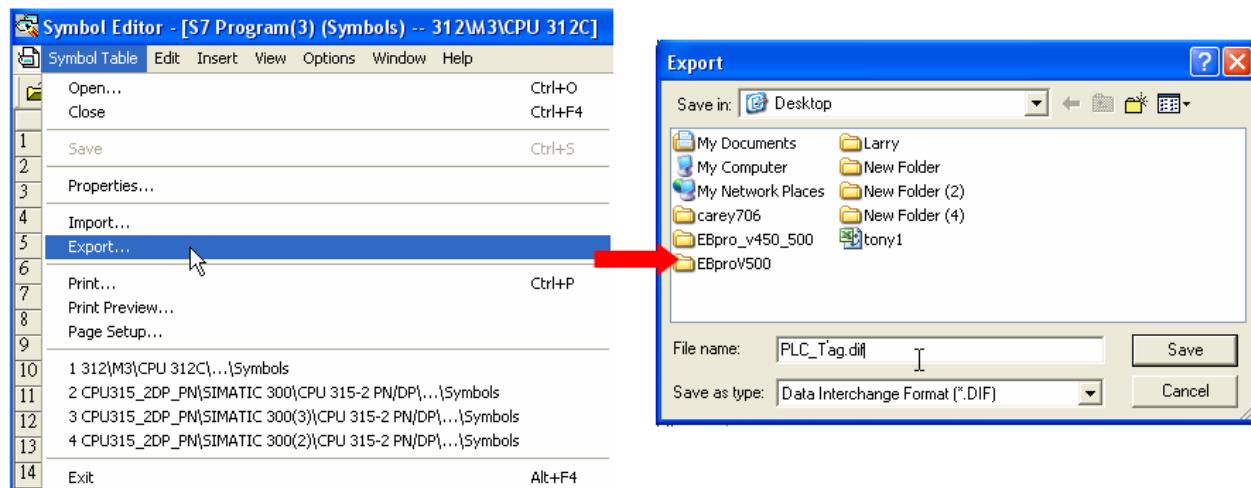

SIEMENS STEP 7 program allows building files of user-defined tag (*.dif file and *.AWL file), and import these files in EasyBuilder8000/EasyBuilderPro -> System Parameter Settings. The following describes how to build and import these two types of files.

1. Building *.dif File

- a、 In “Symbols” create user-defined tag.

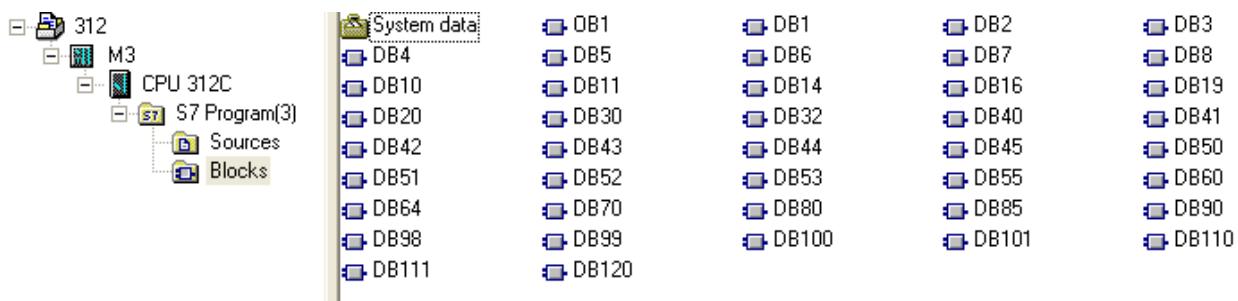

- b、 Click **Export** to export the edited file and click **Save**.

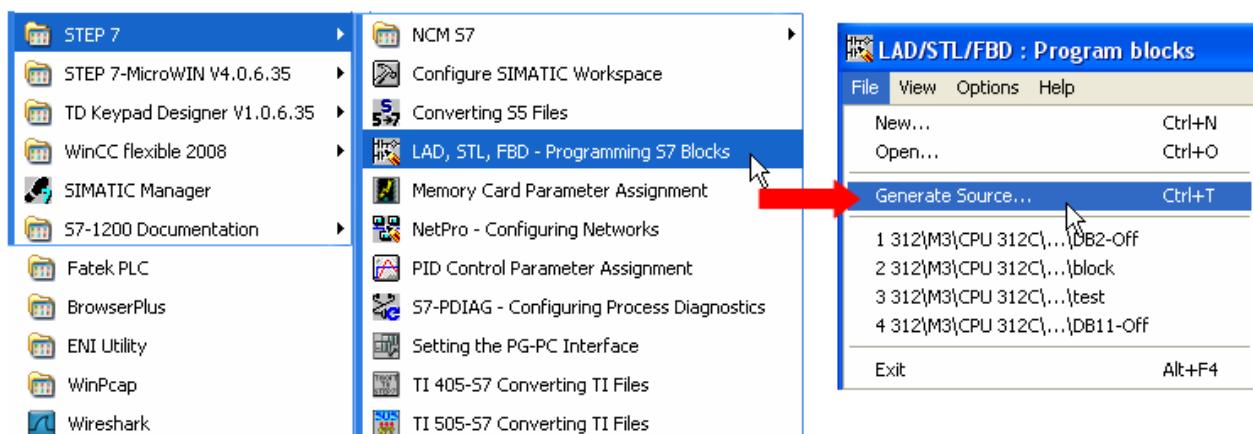

2. Building *.AWF File

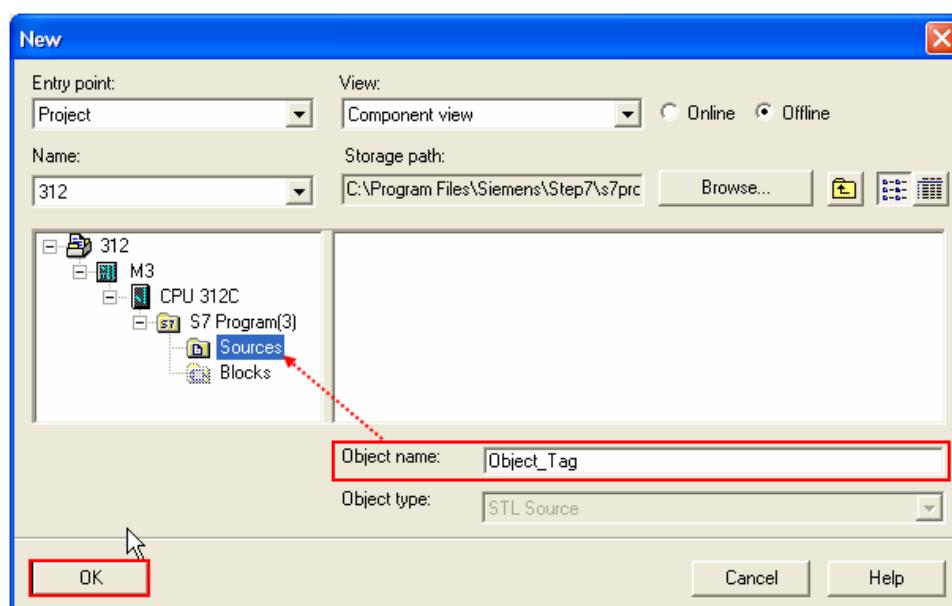

a、 In **Blocks** create items as shown below:

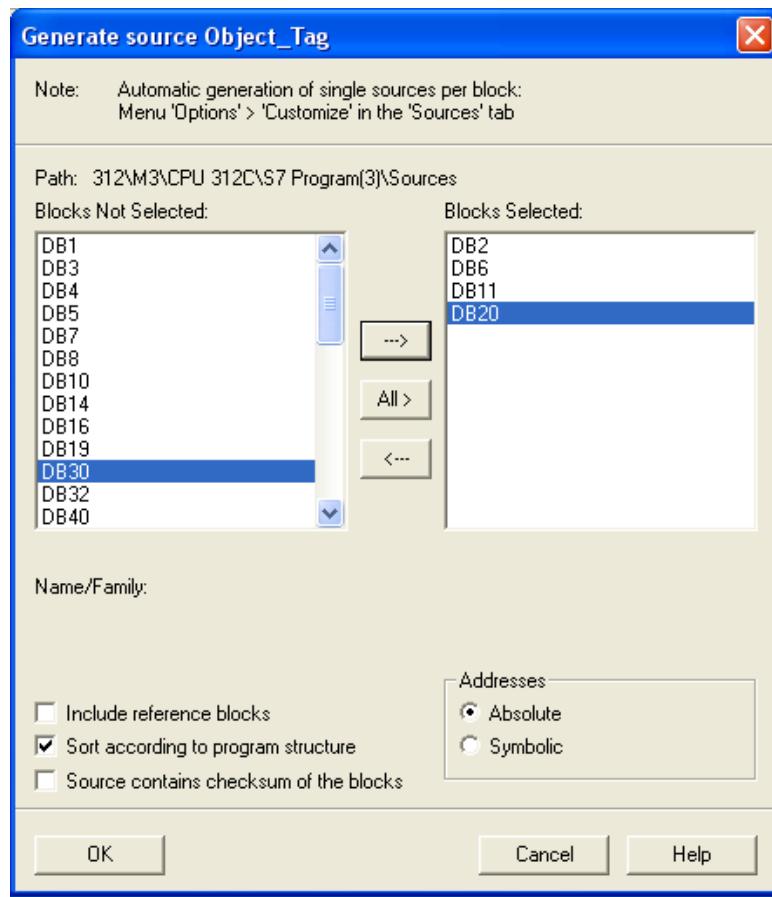

b、 Open **LAD/STL, FBD – Programming S7 Blocks**, click **File -> Generate Source**.

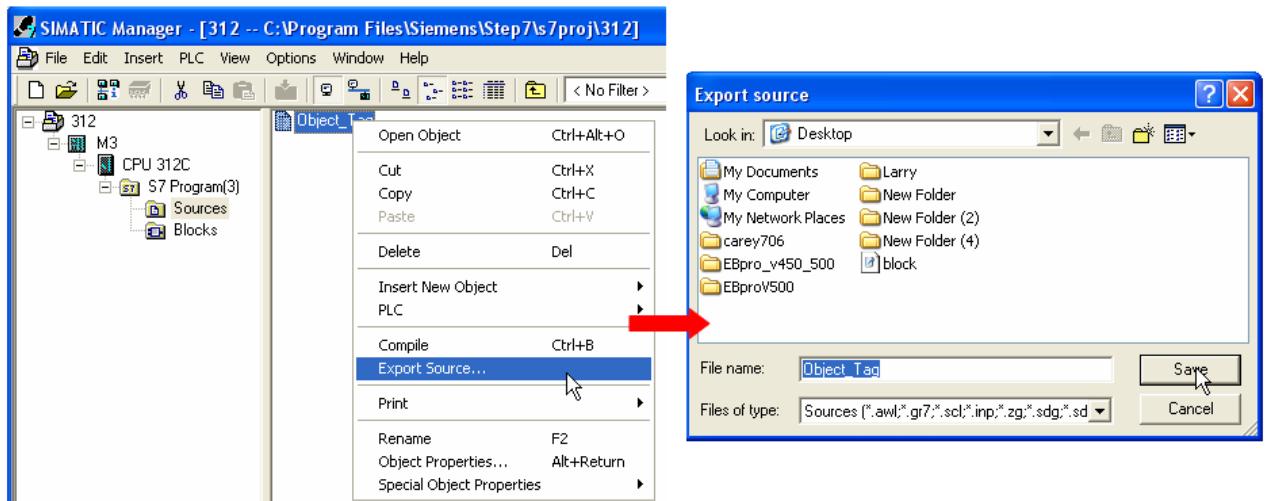

c、 Select **Sources** as storage path, specify the file name then click **OK**.

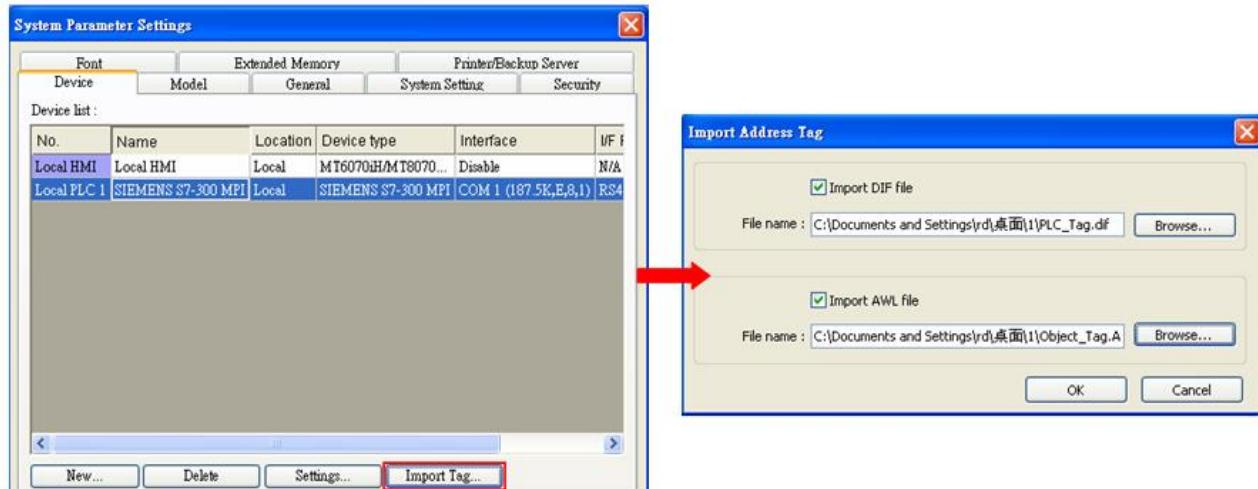

d、Select the objects to be exported then click **OK**.

e、Under **Sources** there will be names of the saved files, select **Export Source** to build *.AWL file.

The generated *.dif and *.AWL files can be imported in EasyBuilder8000/EasyBuilderPro **System Parameter Settings**, by clicking **Import Tag**.

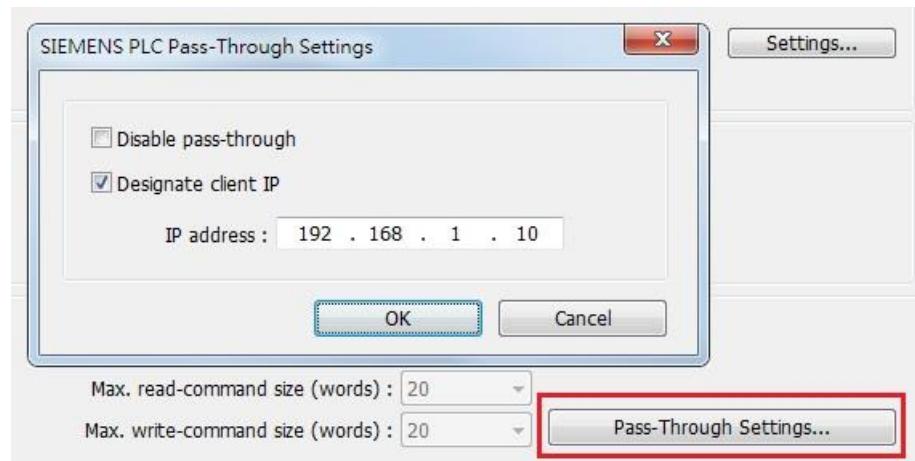

Tag information successfully imported.

Pass-Through Settings:

[Designate client IP]: In Pass-through mode designate the client IP address to connect HMI. The “client” usually refers to Siemens Step 7 application.

The following lists the system registers relevant to Siemens S7-200 PPI and Siemens S7-300 MPI Pass-through feature.

- [LW-10850: disable/enable (0 : disable, 1 : normal, 2 : IP limited) (siemens pass-through)]
- [LW-10851: destination COM port (siemens pass-through)]: Generally refers to the COM port connected with PLC.
- [LW-10852: destination PLC station no. (siemens pass-through)]
- [LW-10853: communication protocol (0 : invalid, 1 : PPI, 2 : MPI) (siemens pass-through)]
- [LW-10854 to LW-10857: IP of connecting client (siemens pass-through)]: Displays current client IP address connected with HMI.
- [LW-10858 to LW-10861: IP of designated client (siemens pass-through)]: If LW-10850 is set to 1, the system registers can be used to designate the client IP connected with HMI.
- [LW-10862: connection status (0 : ready, 1 : client connecting) (siemens pass-through)]
- [LW-10863: execution status (0 : normal, 1 : error) (siemens pass-through)]
- [LW-10864: the last error (siemens pass-through)]

The following table lists the error codes, the description of each code, and the possible reason.

| Error Code | Description | Possible Reason |
|------------|-------------------------------------|--|
| 0 | Successfully executed | |
| 1 | Prohibit client from connecting HMI | HMI is already running pass-through and won't accept any request from other client. |
| 2 | Prohibit client from connecting HMI | When LW-10850 is set to 1, the client IP for connecting HMI is different from the IP specified in LW-10858 ~ LW-10861. |
| 3 | Invalid communication protocol | Invalid setting in LW-10853. |
| 4 | Invalid PLC station number | The PLC station number specified in LW-10852 does not exist. |
| 5 | Delayed communication | PLC connection failure. |
| 6 | Busy communication | PLC does not accept pass-through request, please confirm PLC settings. |
| 7 | Invalid pass-through request | Environment setup failure. |

SIGMATEK S-DIAS CPU (Ethernet)

Supported Series: SIGMATEK S-DIAS Digital Mix DM162

Website: <http://www.sigmatek-automation.com/en/>

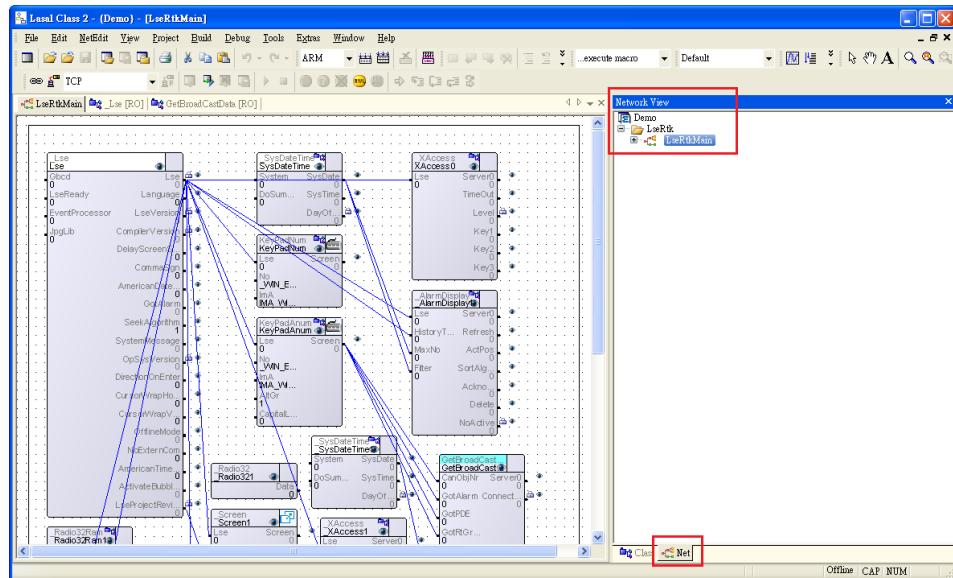

HMI Setting:

| Parameters | Recommended | Options | Notes |
|---------------------|--------------------------------|---------|-------|
| PLC type | SIGMATEK S-DIAS CPU (Ethernet) | | |
| PLC I/F | Ethernet | | |
| Port no. | 1956 | | |
| PLC sta. no. | 0 | | |

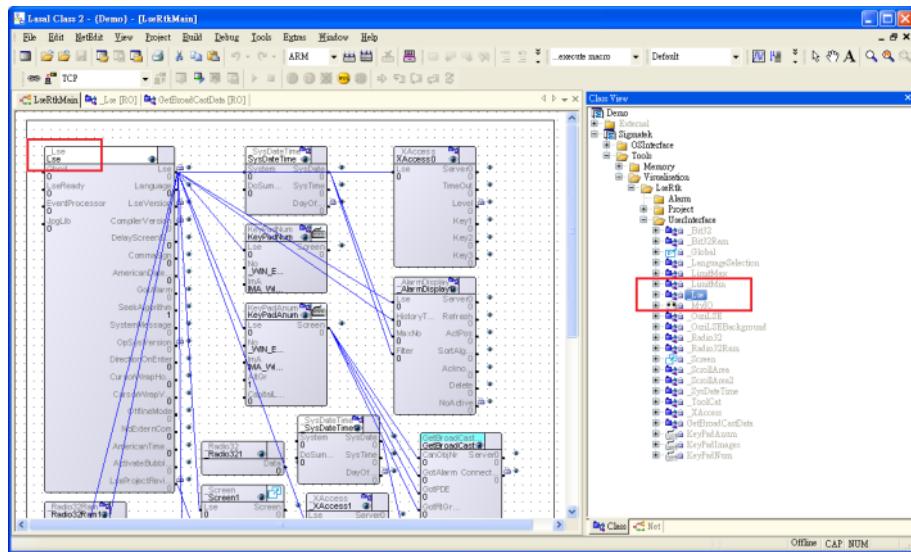

| | | | |
|-------------------|-----|-------------------|-----|
| On-line simulator | Yes | Multi-HMI connect | Yes |
|-------------------|-----|-------------------|-----|

How to Import Tag:

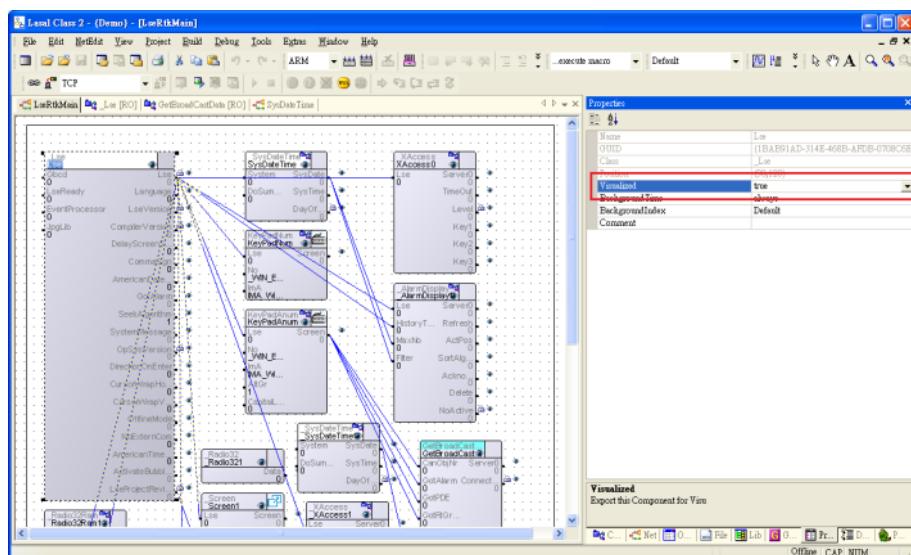

1. Launch **LASAL Class 2**, click **Network View** tab, and the software editing area opens.

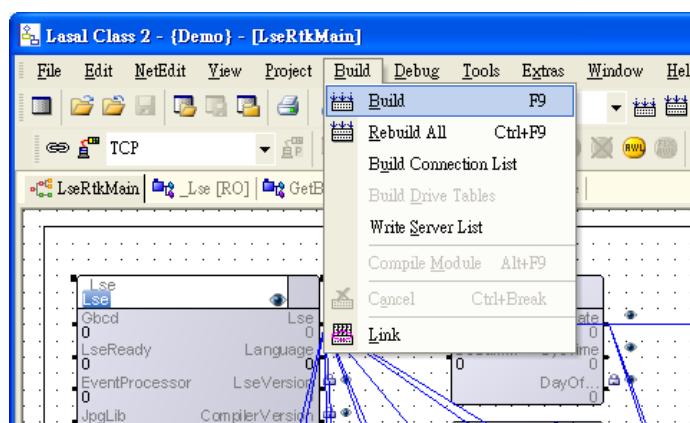

2. Switch to **Class View tab and drag the object to the editing area.**

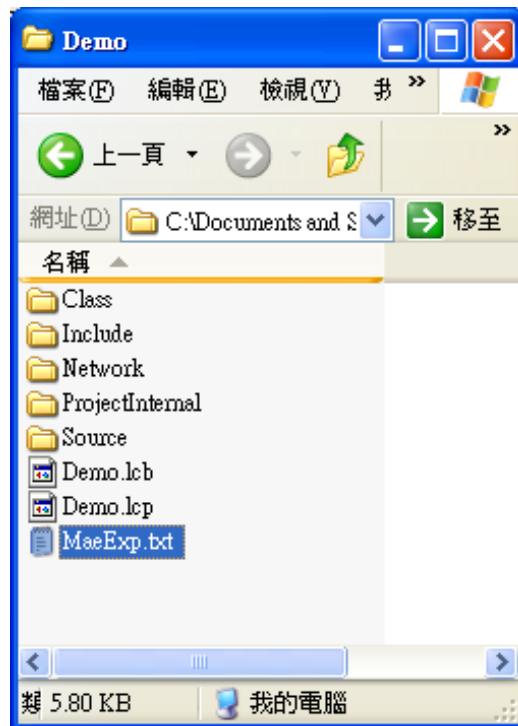

3. In the editing area select the object, and in **Properties tab select **true** for **Visualized**.**

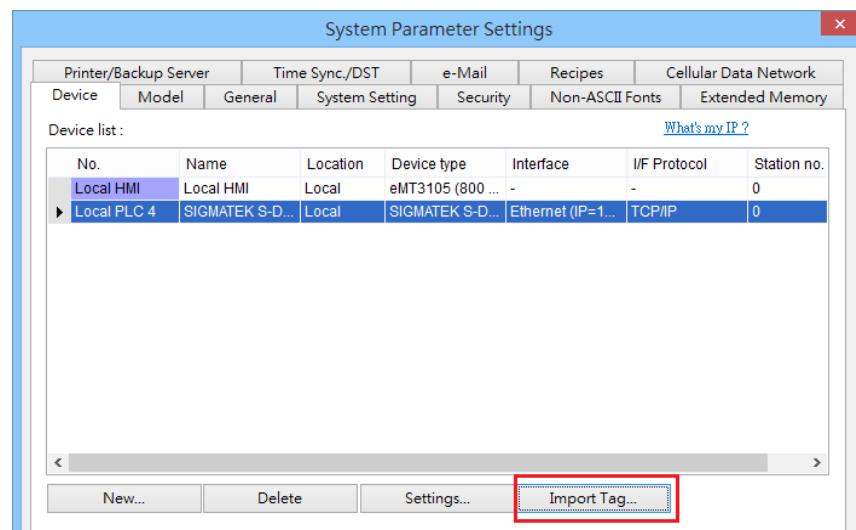

4. Build the file.

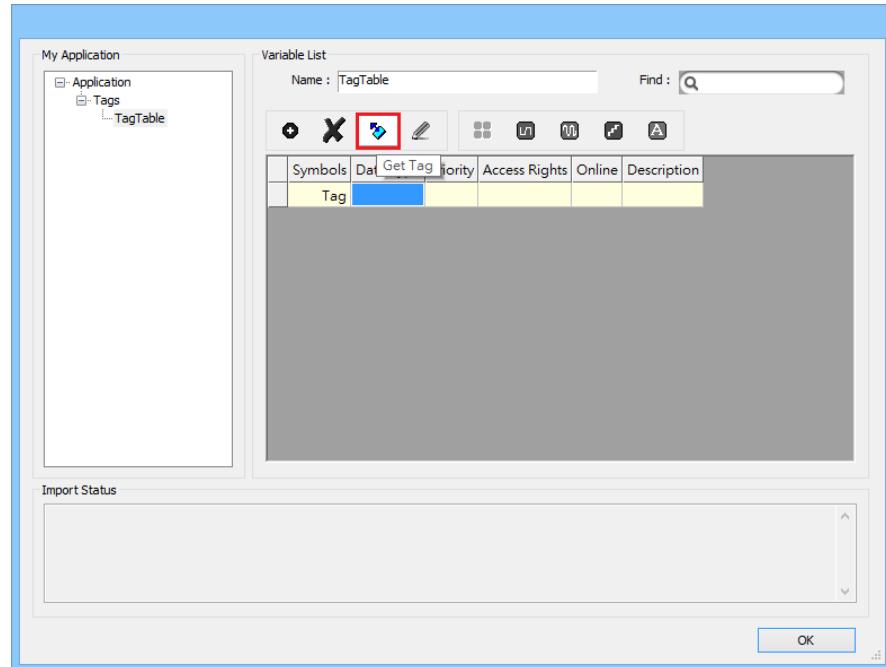

5. After editing, the **MaeExp.txt** file will be generated under the project folder, and the file can be imported to EasyBuilder. If **false** was selected for Visualized in step 3, then the file will not be imported to EasyBuilder.

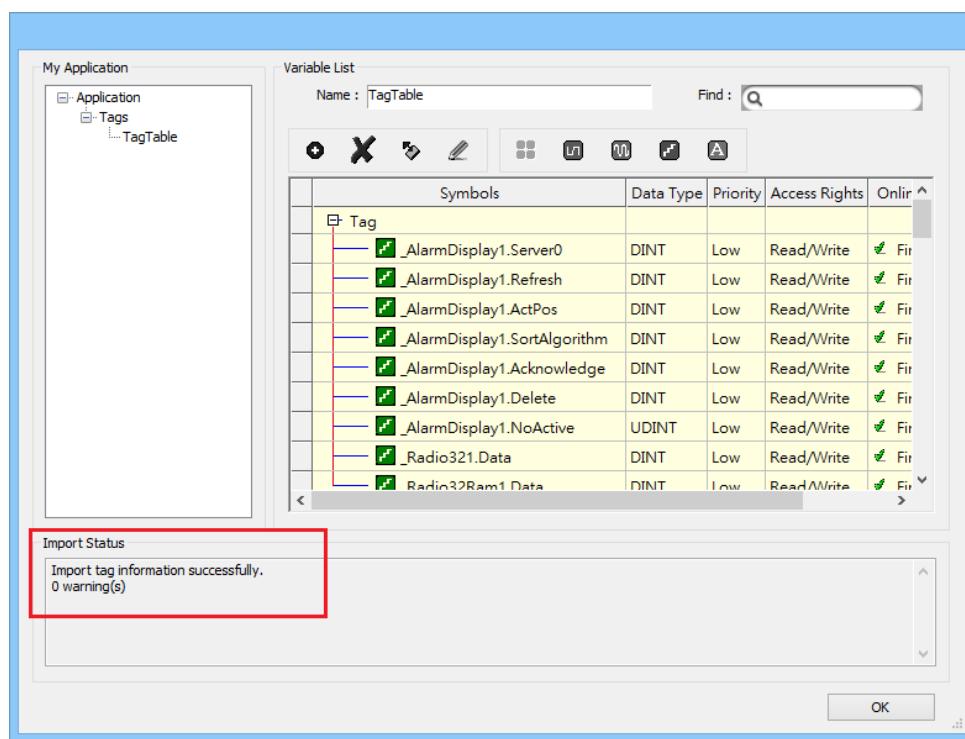

6. Launch EasyBuilder, select SIGMATEK driver and set the parameters, and then select **Import Tag**.

7. Click **Get Tag** » **Verifying tags with PLC**, and then select the MaeExp.txt file generated in step 5. Please check that the PLC is on line for verification. The address tags can also be imported by clicking **Get Tag** » **Import Tag**, and then run off-line simulation. Please note that on-line simulation and download cannot be carried out using this method.

8. See the result in **Import Status** field.

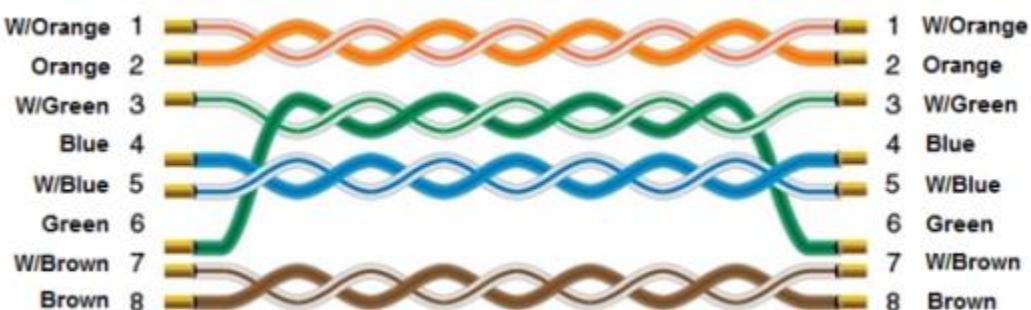

Support Device Type:

| Data type | EasyBuilder data format | Memo |
|-----------|-----------------------------------|--------|
| Bool | bit | |
| Byte | 16-bit BCD, Hex, Binary, Unsigned | 8-bit |
| SInt | 16-bit BCD, Hex, Binary, Signed | 8-bit |
| USInt | 16-bit BCD, Hex, Binary, Unsigned | 8-bit |
| Word | 16-bit BCD, Hex, Binary, Unsigned | 16-bit |
| Int | 16-bit BCD, Hex, Binary, Signed | 16-bit |
| UInt | 16-bit BCD, Hex, Binary, Unsigned | 16-bit |
| DWord | 32-bit BCD, Hex, Binary, Unsigned | 32-bit |
| DInt | 32-bit BCD, Hex, Binary, Signed | 32-bit |
| Real | 32-bit Float | 32-bit |
| UDInt | 32-bit BCD, Hex, Binary, Unsigned | 32-bit |
| String | ASCII (Use Unicode) | 16-bit |

Max.write-command size (words): 1

For G1/H1/P1 Series Inverter, if standard parameter address is in decimal= $100*G+F$:

G=Group (parameter group code0~9); F=Function no. (parameter number 0~99)

For example: Pr5-20 (decimal Dec.) parameter address is expressed as $100*5+20=520$.

| Parameter (PrX-XX) | Address (decimal) |
|--------------------|-------------------|
| 0-00 | $0*100+0=0$ |
| 0-14 | $0*100+14=14$ |

Multi-HMIs-Multi-PLCs Communication Setting:

For SIEMENS S7-300 MPI driver in Multi-HMIs-Multi-PLCs communication, [Max. station no. (MPI network)] parameter must be correctly set. This setting is relevant to the station no. of the devices, as shown, two HMI (station no. 0, 1) and two PLC (station no. 2, 3) are in MPI network, Max. Station No. should be set to 3.

For the effectiveness of communication, users may set PLC device in STEP 7 as shown below. In Properties MPI / Network Settings, set Highest MPI address to the number closest to the actual device station number.

Note:

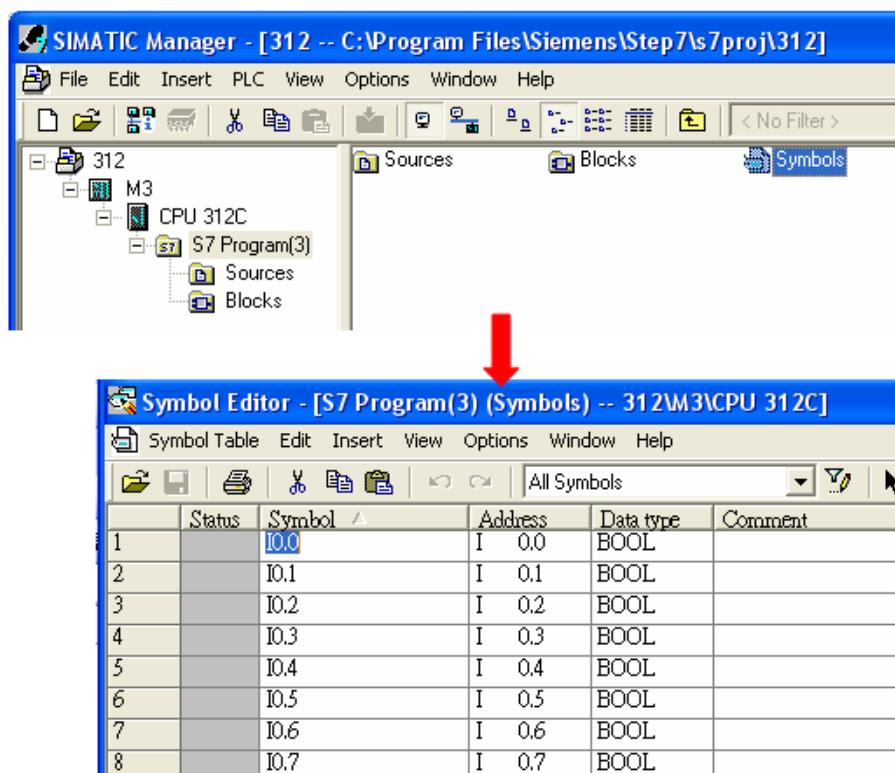

- HMI sta. no. can not be the same as PLC sta. no.
- Highly recommended that the device station numbers start from 0 sequentially and correctly set [Max. station no. (MPI network)].
- Available for EasyBuilder V4.50 and later.

How to Import Tag:

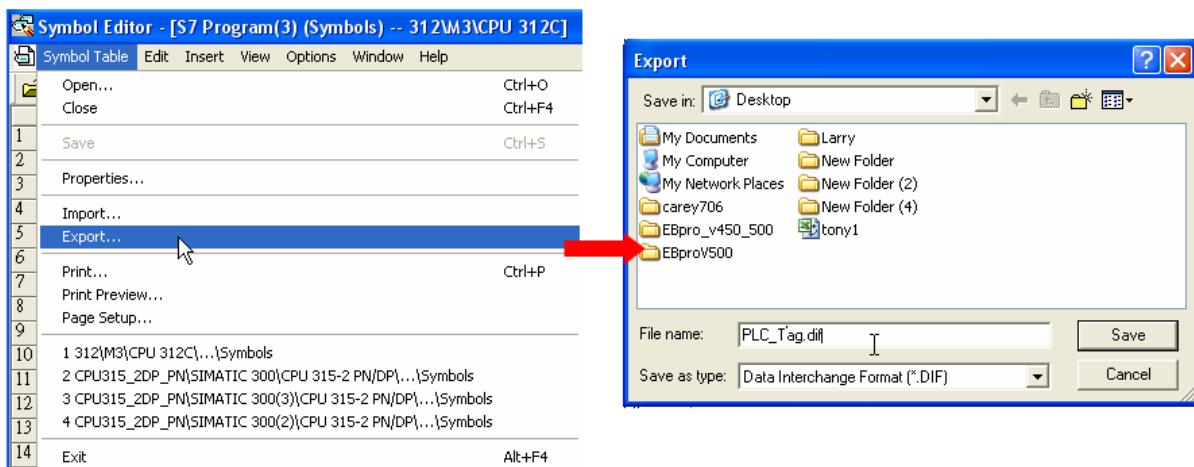

SIEMENS STEP 7 program allows building files of user-defined tag (*.dif file and *.AWL file), and import these files in EasyBuilder8000/EasyBuilderPro -> System Parameter Settings. The following describes how to build and import these two types of files.

1. Building *.dif File

- a、 In “Symbols” create user-defined tag.

- b、 Click **Export** to export the edited file and click **Save**.

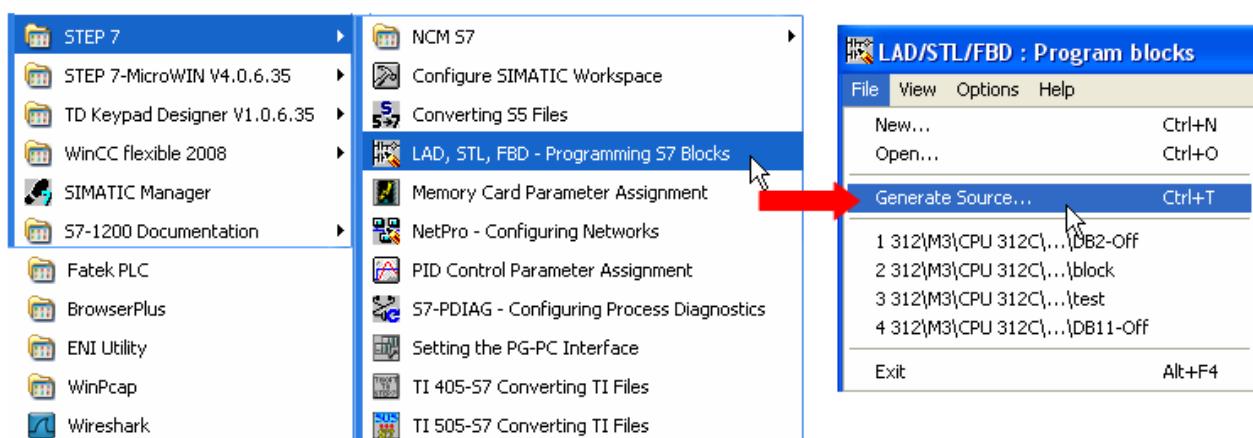

2. Building *.AWF File

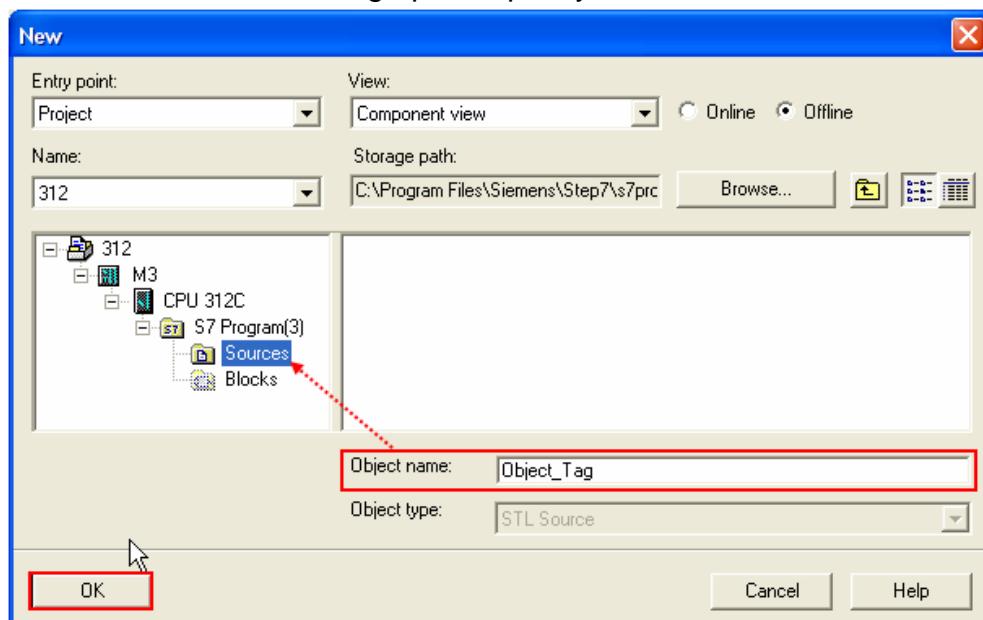

a、 In **Blocks** create items as shown below:

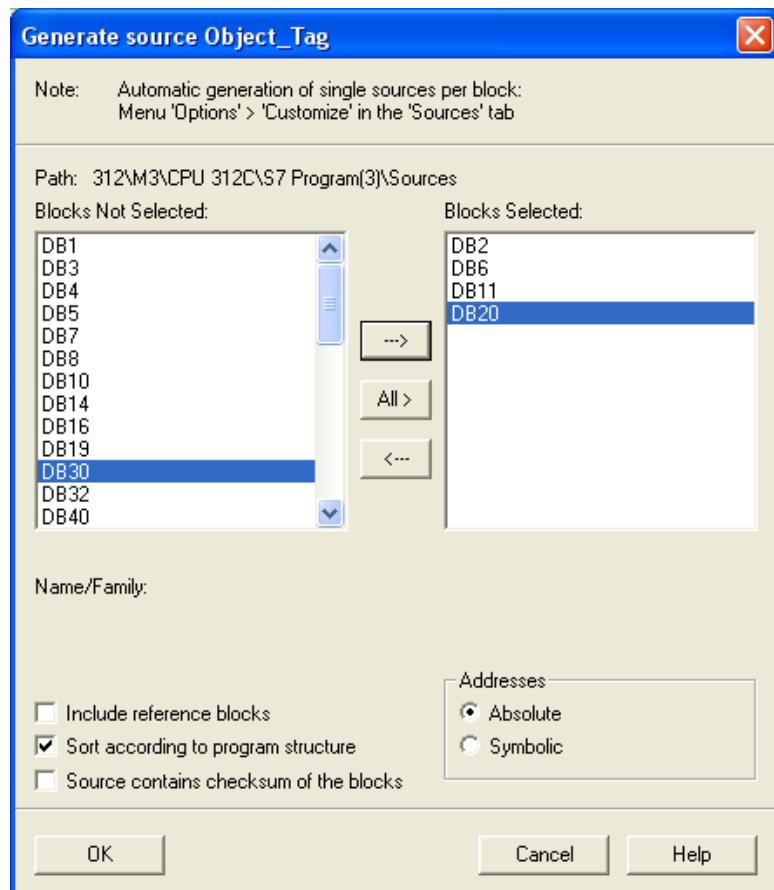

b、 Open **LAD/STL, FBD – Programming S7 Blocks**, click **File -> Generate Source**.

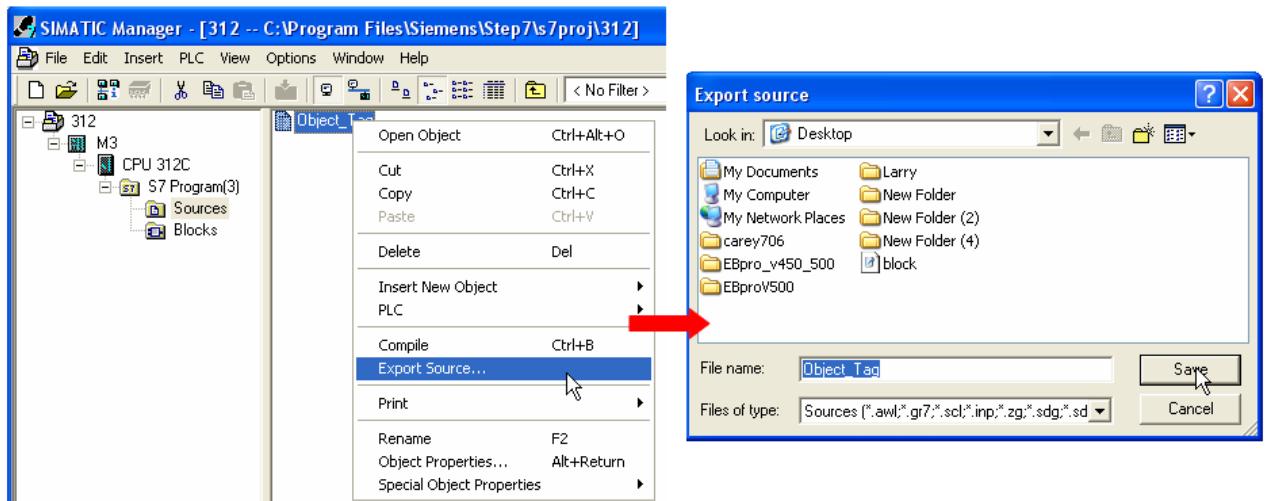

c、 Select **Sources** as storage path, specify the file name then click **OK**.

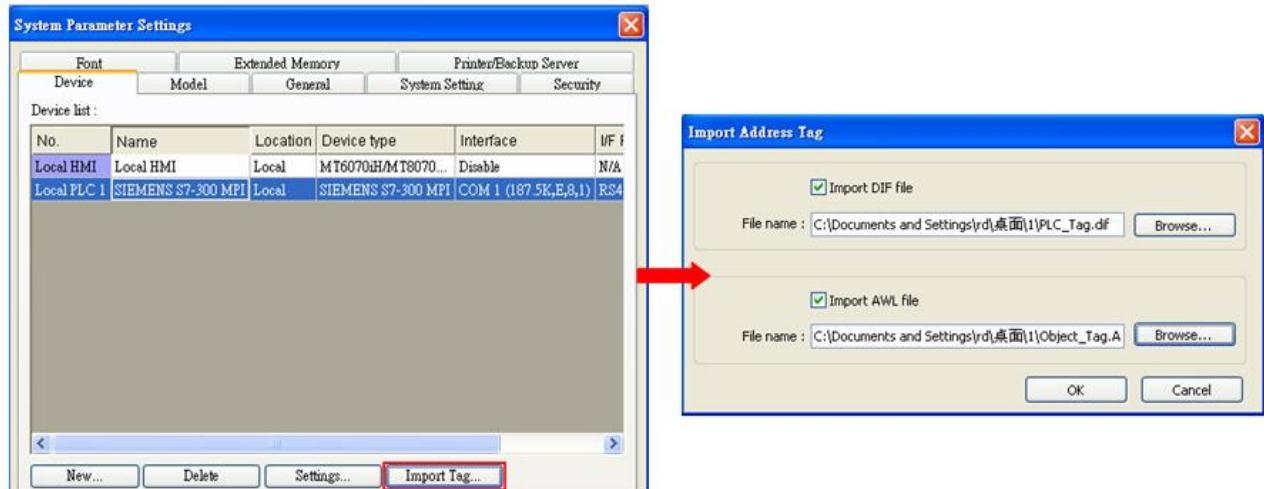

d、Select the objects to be exported then click **OK**.

e、Under **Sources** there will be names of the saved files, select **Export Source** to build *.AWL file.

The generated *.dif and *.AWL files can be imported in EasyBuilder8000/EasyBuilderPro System Parameter Settings, by clicking Import Tag.

6. The setting will be finished as below.

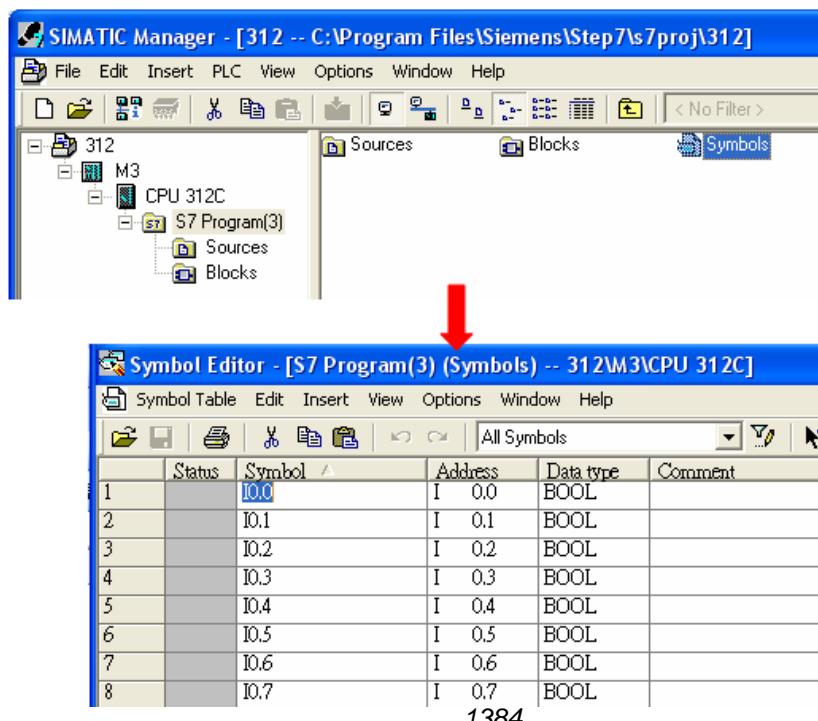

How to Import Tag:

SIEMENS STEP 7 program allows building files of user-defined tag (*.dif file and *.AWL file), and import these files in EasyBuilder8000/EasyBuilderPro -> System Parameter Settings. The following describes how to build and import these two types of files.

1. Building *.dif File

- a、 In “Symbols” create user-defined tag.

SIMATIC Manager - [312 -- C:\Program Files\Siemens\Step7\s7proj\312]

b、 Click **Export** to export the edited file and click **Save**.

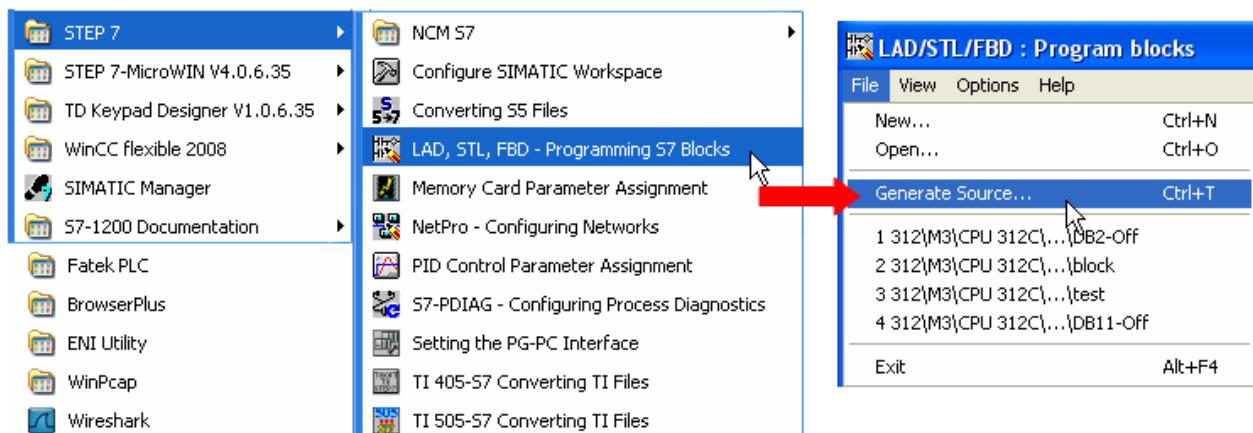

2. Building *.AWF File

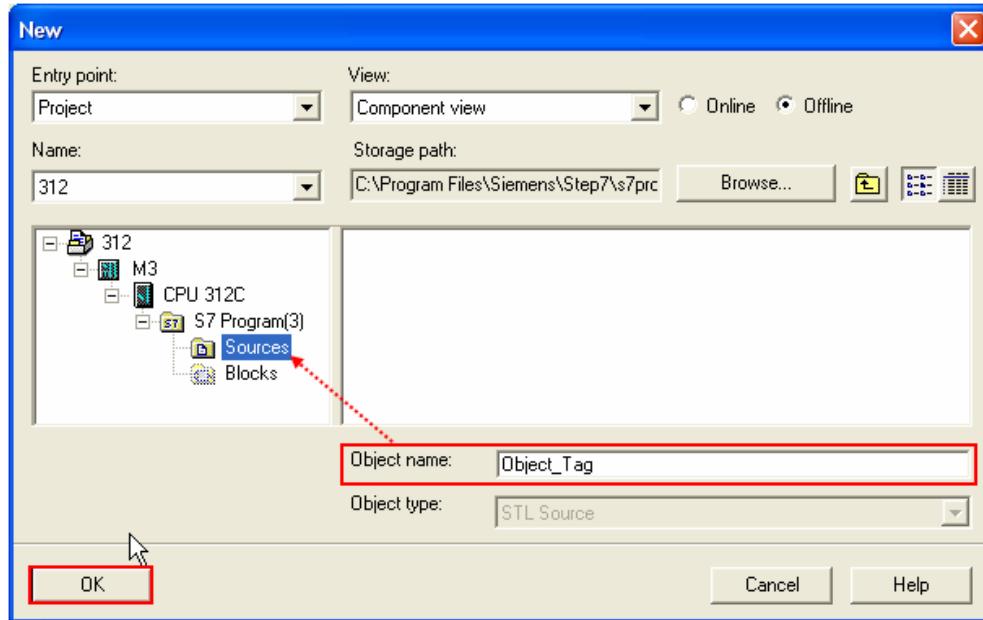

a、 In **Blocks** create items as shown below:

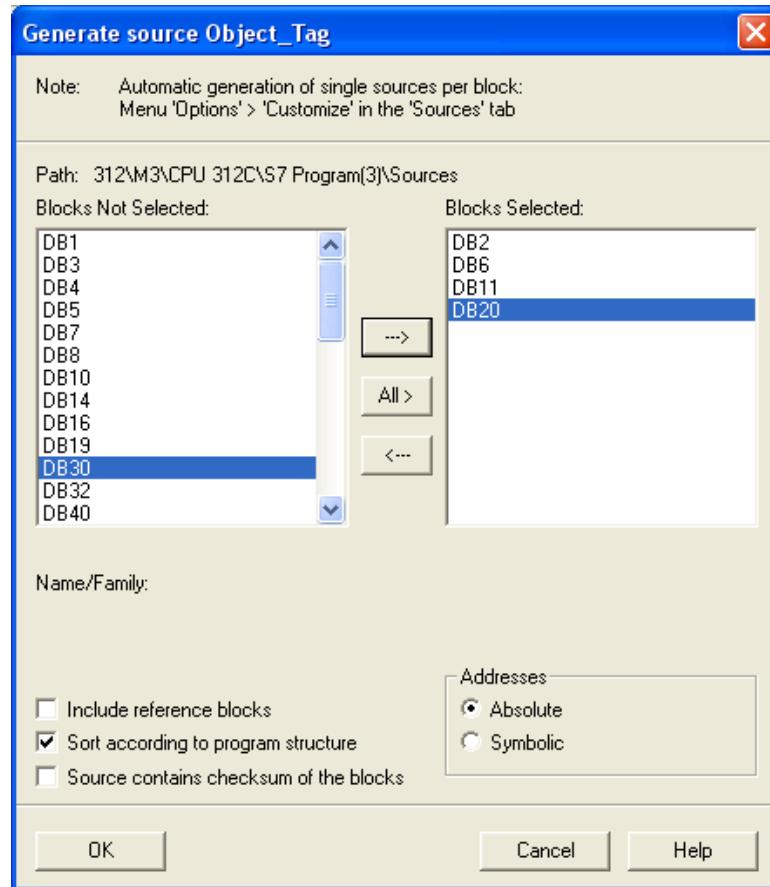

b、 Open **LAD/STL, FBD – Programming S7 Blocks**, click **File > Generate Source**.

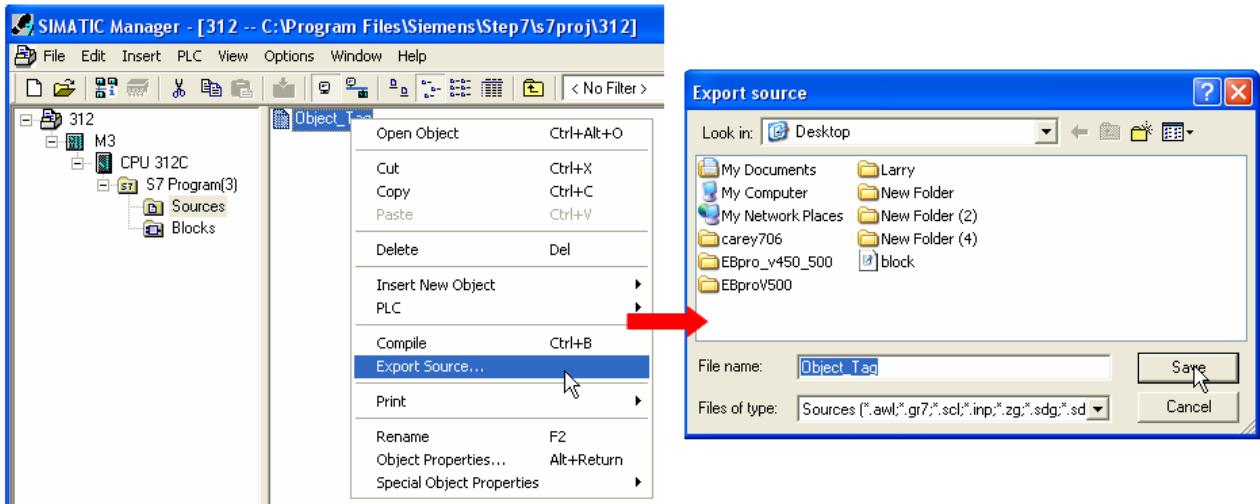

c、Select **Sources** as storage path, specify the file name then click **OK**.

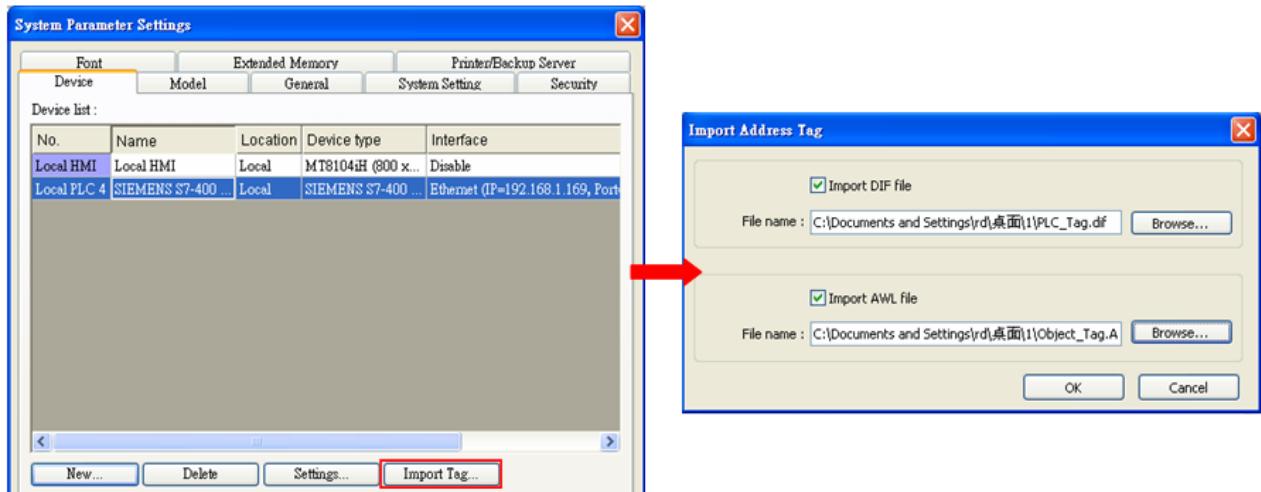

d、Select the objects to be exported then click **OK**.

- e、Under **Sources** there will be names of the saved files, select **Export Source** to build *.AWL file.

The generated *.dif and *.AWL files can be imported in EasyBuilder8000/EasyBuilderPro System Parameter Settings, by clicking Import Tag.

Weintek Remote IO (CANopen)

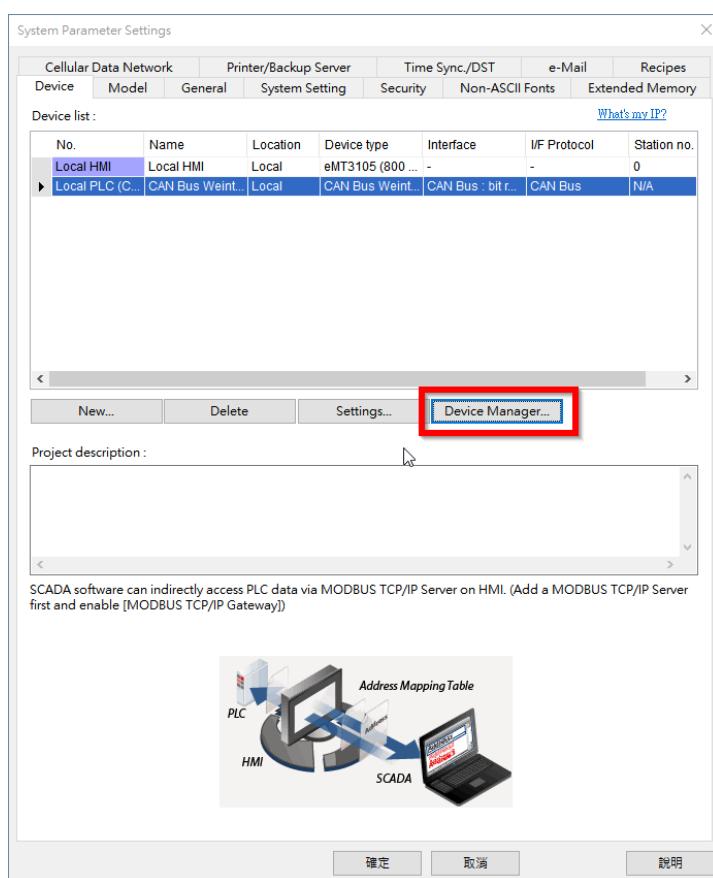

Supported series: iR-DI16-K, iR-DM16-P, iR-DQ16-P, iR-DM16-N, iR-DQ16-N, iR-DM16-R, iR-DQ16-R, iR-AI04-VI, IR-AQ04-VI, iR-AM06-VI, iR-AI04-TR

HMI Setting:

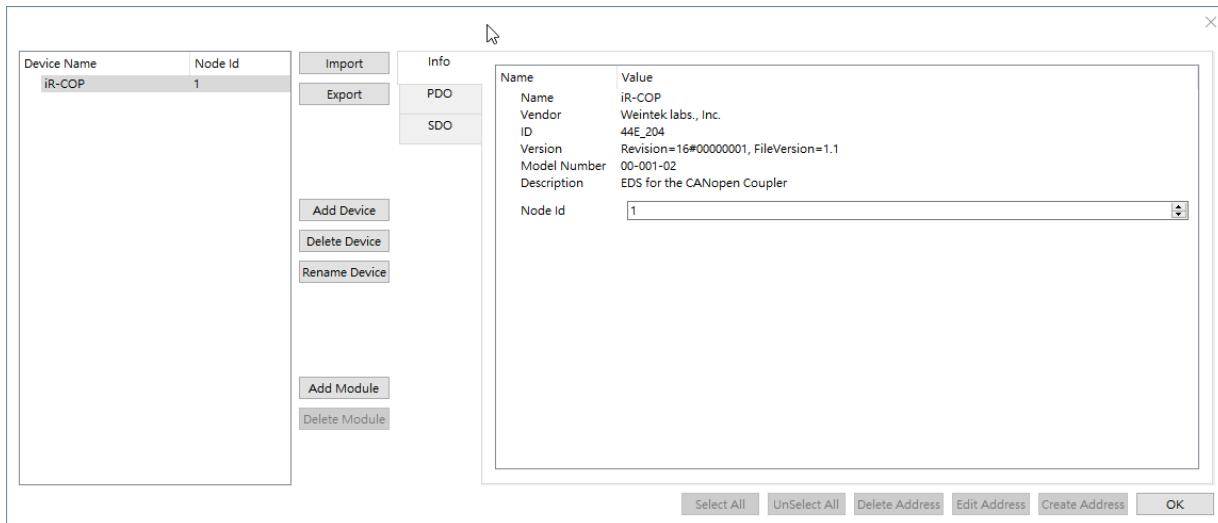

| Parameters | Recommended | Options | Notes |

| PLC type | Weintek Remote IO (CANopen) | | |
| Baud rate | 250K | 10K~1M | |
| Online simulator | NO | Extend address mode | NO |

Device Setting:

1. Launch EasyBuilder Pro and add **Weintek Remote I/O (CANopen)** driver into the device list, Click [Device Manager] to configure CANopen device and addresses.

2. In Device Manager window, a Weintek Remote I/O CANopen device can be found by default.

3. Clicking the buttons on the left side can:

Import: Import the predefined .wtco file into the device list. Please note that current device list will be overwritten by the imported list.

Export: Export current setting as a .wtco file for future use.

Add Device: Add a new Weintek Remote I/O CANopen device.

Delete Device: Delete the selected Weintek Remote I/O CANopen device.

Rename Device: Change device name.

Add Module: Weintek Remote I/O supports the following modules.

Please note that changes in PDO tab will not be updated to Remote I/O. The purpose of editing PDO Mapping here is to ensure correct bit length when importing addresses to HMI, and that the displayed address names on HMI match those used in CANopen.

- **Move Down:** Move the selected Mapping Object one row downward.

SDO (Service Data Object): Displays all items in Object Dictionary.

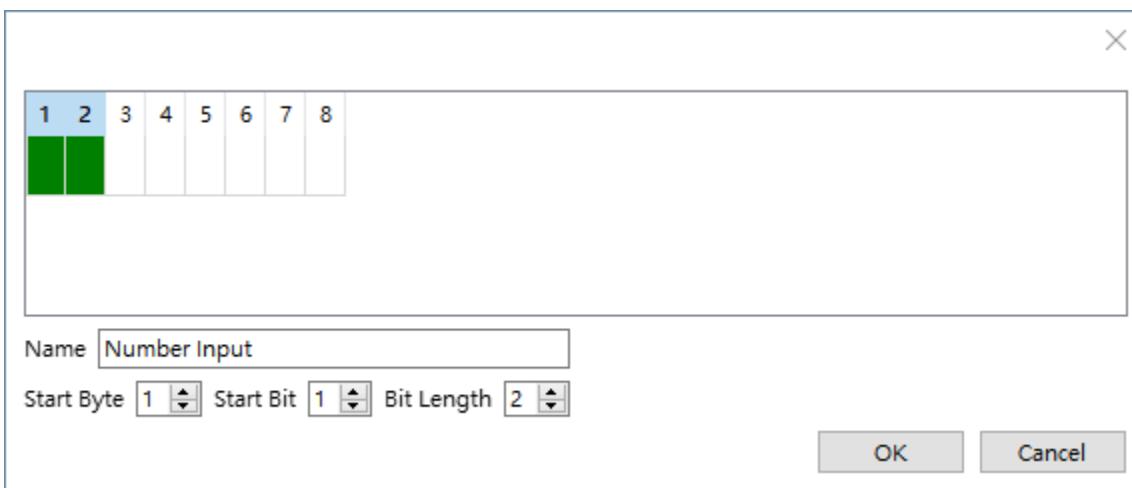

Selecting and Defining Addresses

Users can define address range of the existing items.

For example, to add a user-defined address range under item **[6000] read digital input 8-bit #01** in SDO tab, select the item in the index tree and then click [Create Address].

A dialog box pops up for defining address range. Using the same settings below will add a **Number Input** tag under item **[6000] read digital input 8-bit #01**. The tag will use bit 1~2 of the item as its value. That is, if the value in the item is 15, the value in the tag will be 3.

The buttons at the bottom of both SDO and PDO tab can:

- **Select All:** Select all items.
- **Unselect All:** Unselect all items.
- **Delete Address:** Delete user-defined address.
- **Edit Address:** Edit user-defined address.
- **Create Address:** Create user-defined address.
- **OK:** Import addresses.

PLC Setting:

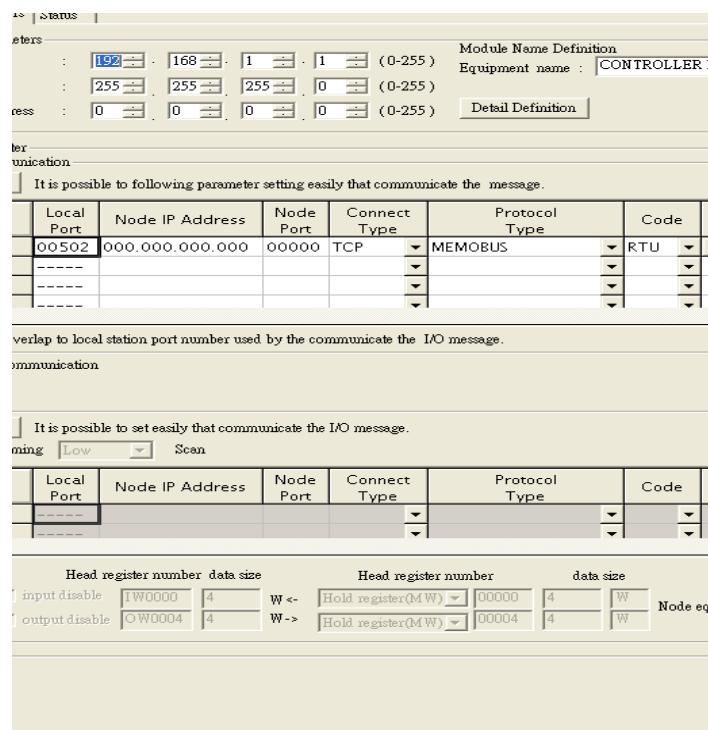

| | |
|--------------------|---------------------|
| Communication mode | MEMOBUS, Slave, RTU |
|--------------------|---------------------|

PLC Ethernet Setting:

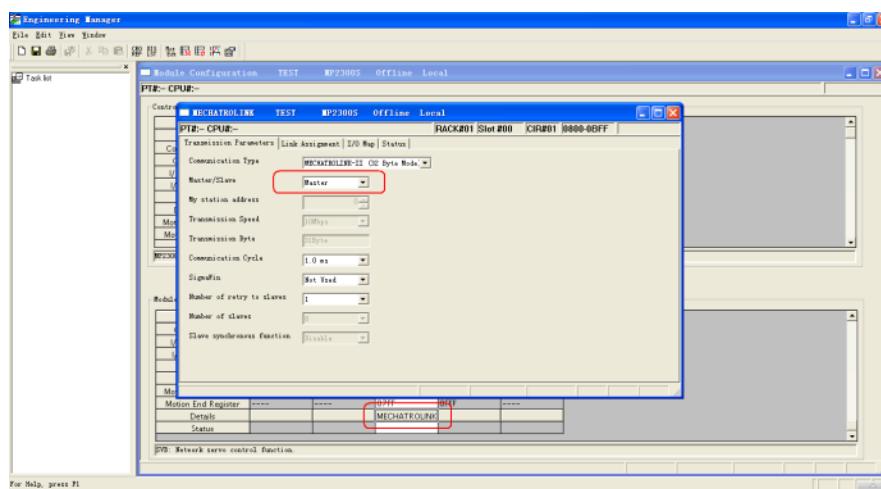

1. Use MPE720 program software, open Module Configuration, double click “218IFA”.

2. In Transmision Parameters input MP2300S IP address, Subnet Mask, Gateway IP.
 In Connection Parameter, CNO -1 input: Local Port=502, Node IP address=000.000.000.000, Node Port=00000, Connect Type=TCP, Protocol Type=MEMOBUS, Code=RTU.

3. Click MECHATROLINK to set up MP2300S PLC as Master.

- 4.Close all dialogs and save to MP2300S.

Note:

1. Only CNO 01 can auto communicate with one HMI. Other CNO need a ladder program created for communication.
2. DIP SW2-2 of MP2300S must be set to OFF position during normal communication, otherwise, IP address will be erased after reset power, and it will be unable to communicate with HMI when set to ON position.

(2) Setting Steps:

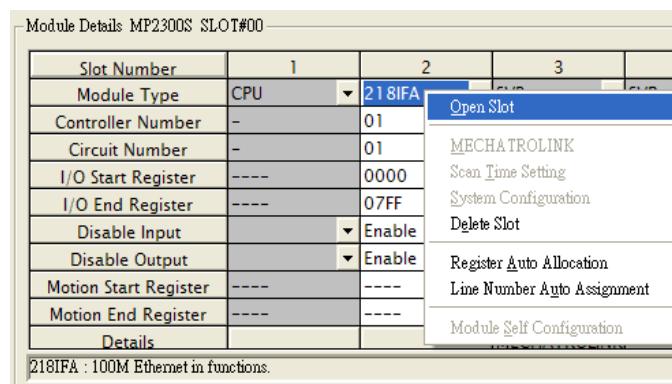

1. Set IP for PLC.

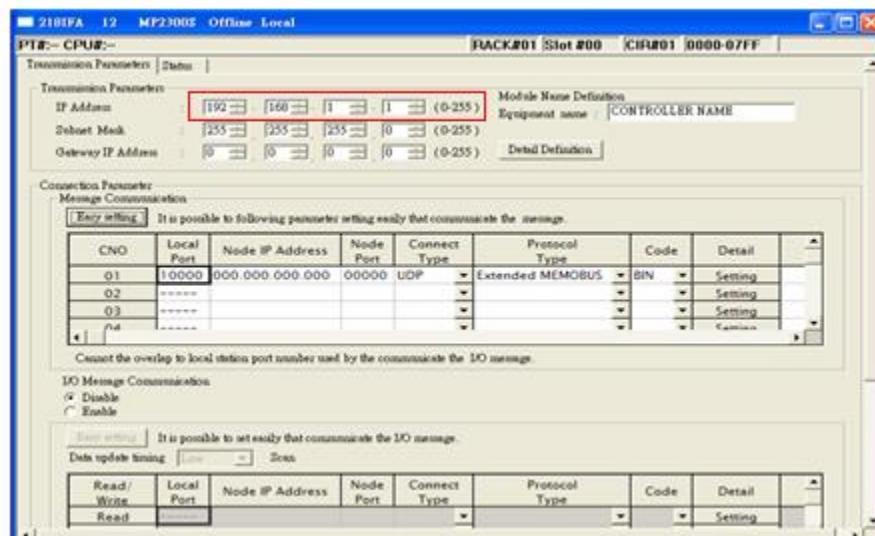

2. Communication parameter setting.

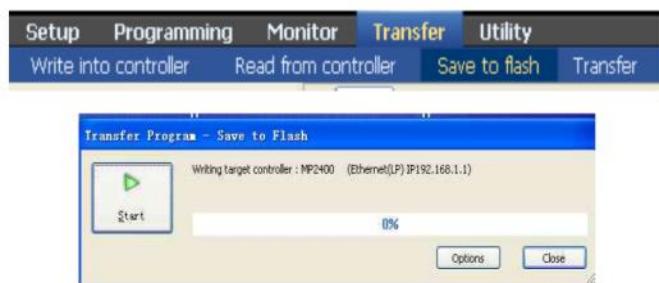

3. Go to Module Details and select [218IFA] for setting relevant parameters for Ethernet transmission.

4. The settings are shown below, PLC IP can't be repeated.

5. Download PLC communication parameters to PLC, and restart the controller.

(3) HMI Settings:

1. Select Ethernet for PLC I/F.
2. Tick [UDP].
3. Set PLC IP and Port, the default Port is 10000.

YASKAWA MP2300Siec

Website: <http://www.yaskawa.com/site/home.nsf/home/home.html>

HMI Setting:

| Parameters | Recommended | Options | Notes |
|--------------------------|--------------------------|----------------------------------|-------|
| PLC type | YASKAWA MP2300Siec | | |
| PLC I/F | Ethernet | | |
| Port no. | 44818 | | |

| PLC sta. no. | 1 | | |

PLC Setting:

MP2300Siec-Motion Works IEC Express (YASKAWA) Settings:

Step 1. Before HMI communicates with MP2300Siec using Ethernet/IP, the Instance Input and Instance Output of MP2300Siec device must be set correctly. Multiple Instances are allowed to be built at one time, please click [Save] after setting.

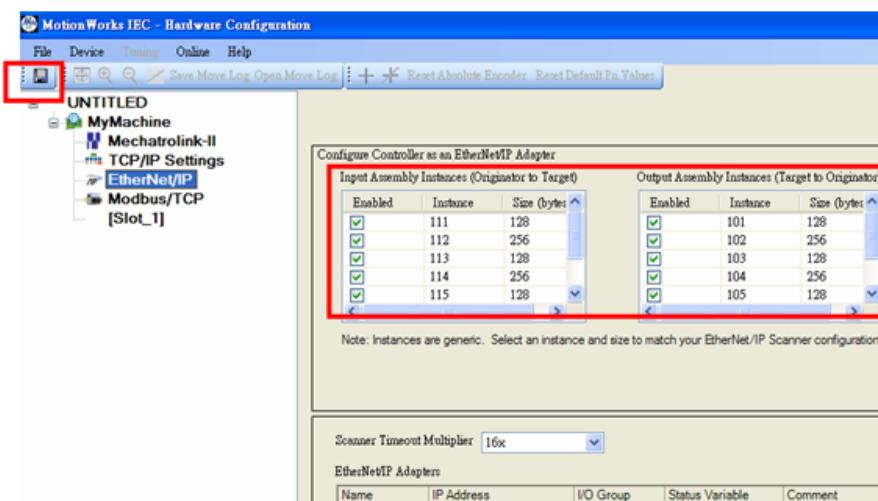

Fig. 1 Assembly Instances

Step 2. Global Variables will automatically add in E/IP Input and Output data, Input and Output data name and address type can be user-defined.

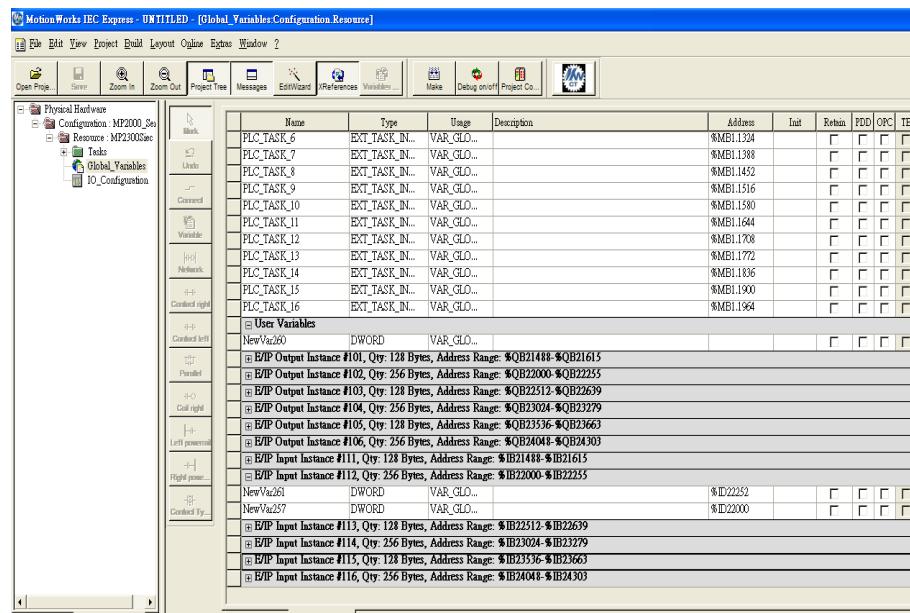

Fig. 2 Global Variables

Step 3. When download Project to device (MP2300Siec), please go to (Fig. 3) Resource->Settings to access setting dialog (Fig. 4) for setting MP2300Siec IP address.

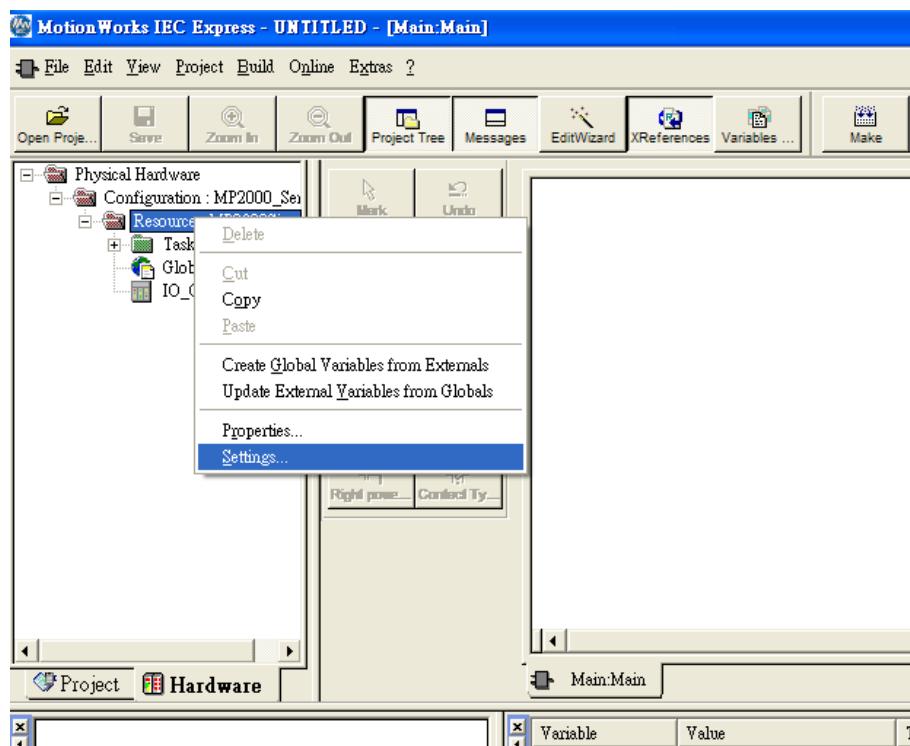

Fig. 3 Motion Works IEC Express – Settings

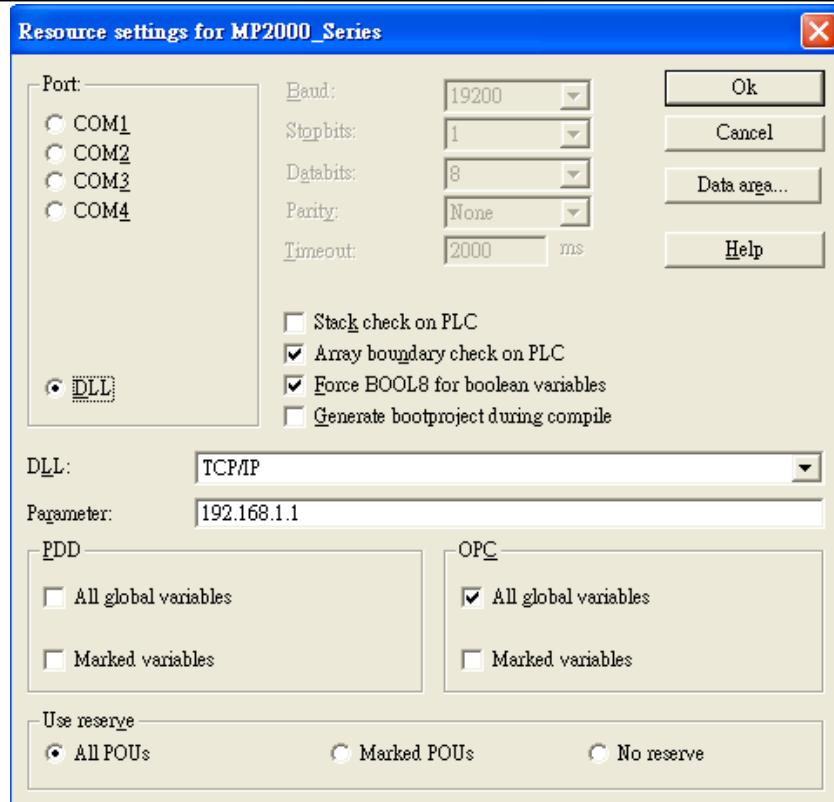

Fig. 4 Resource Settings

Step 4. Start compilation.

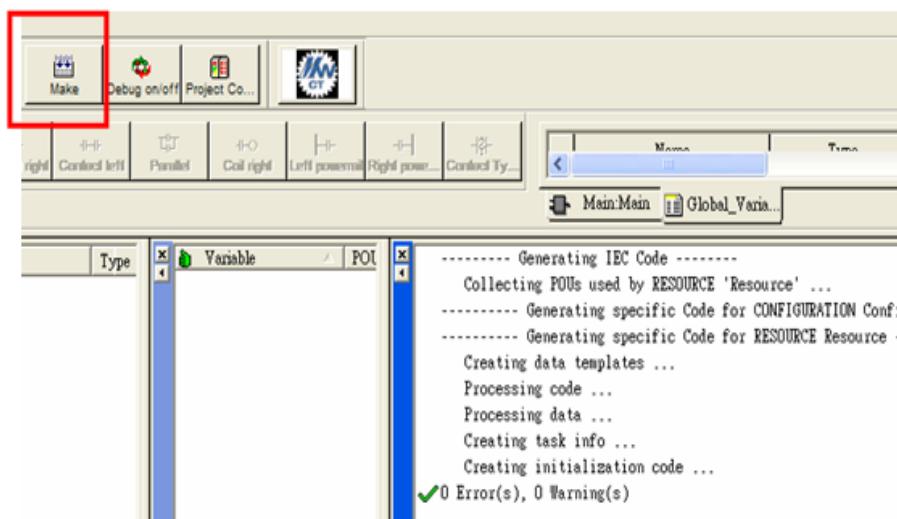

Fig. 5 Editing Screen

Step 5. Download project to device- MP2300Siec, and execute Cold.

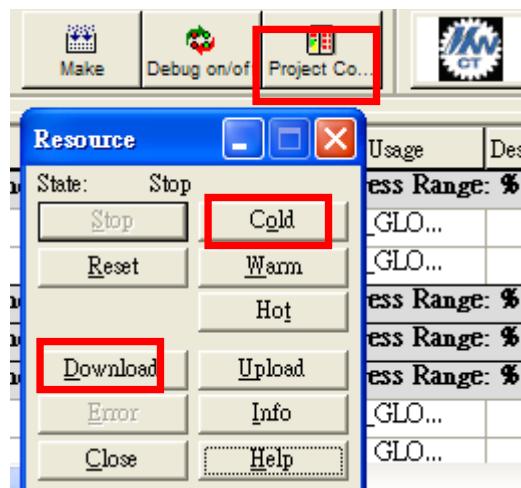

Fig. 6 Project Downloading

You may use one of the two drivers to connect Yaskawa MP2300Siec:

1. Yaskawa MP2300Siec driver.
2. Rockwell EtherNet/IP (CompactLogix) – Free Tag Names driver.

(1) Yaskawa MP2300Siec driver.

Step 1. System Parameter Settings

Open EasyBuilder project, as shown in Fig. 7, Assembly Instance and Size must match the software default factory settings, and please don't select UDP. Fig.8 below shows how HMI Input / Output address is mapped to MP2300Siec device.

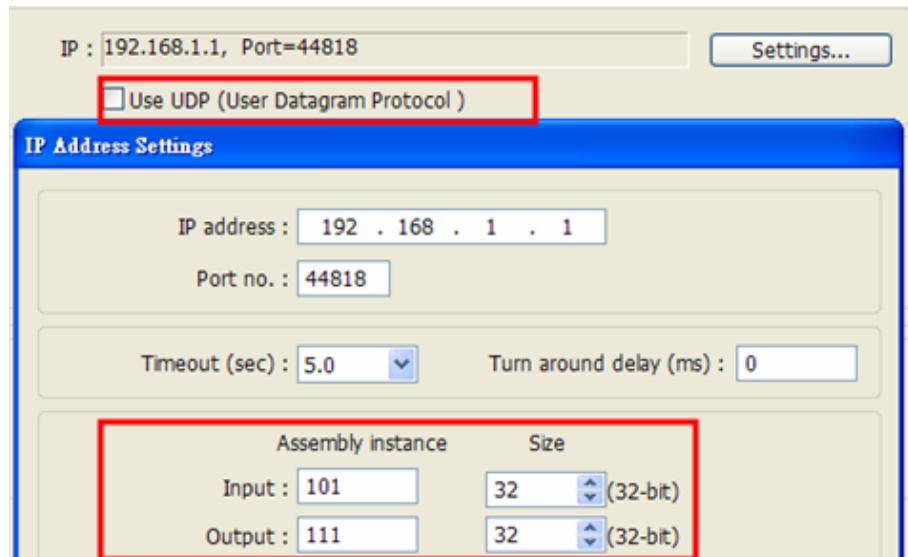

Fig. 7 Instance Setting

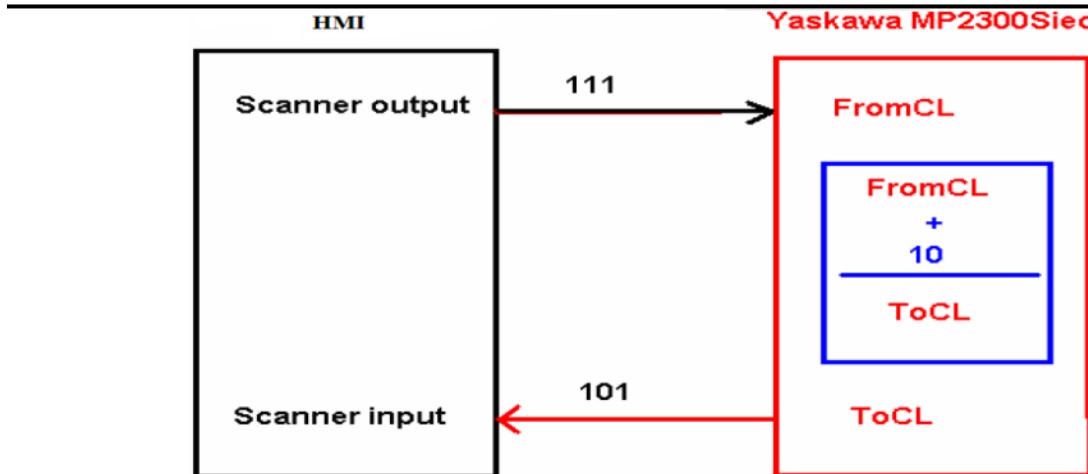

Fig.8 HMI and MP2300Siec I/O Mapping

Step 2. Address Setting:

Instance 101 and Instance 111 are defined as 128Bytes, on the project window , WORD objects can be used, with data typed defined as 32-Bit Unsigned, Input addresses set to 0、2、4、6.....62 for reading Instance 101 data.

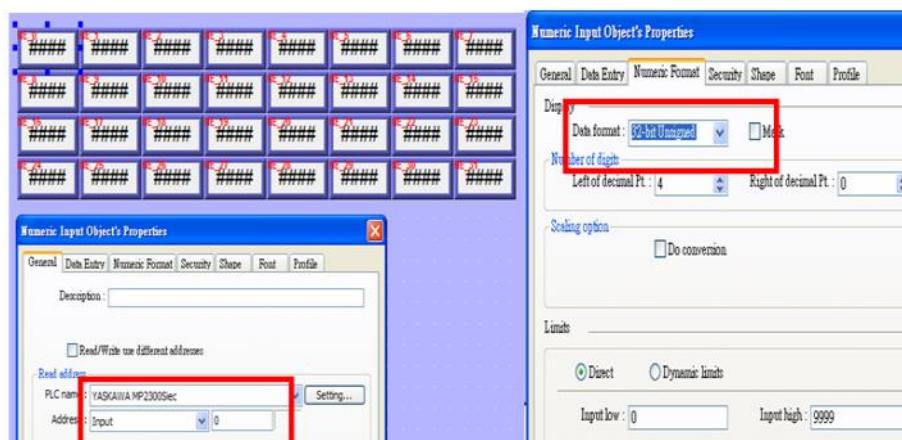

Fig. 9 Address Setting

(2) Rockwell EtherNet/IP (CompactLogix) – Free Tag Names driver.

Step 1. In EasyBuilder8000/EasyBuilder Pro project, when using Rockwell EIP driver to import CSV file (as in Fig. 10), please open Structure Editor (Fig. 11), and right click on Module Defined to add New Data Type.

WideField communication setting:

For WideField communication setting, select [Tool]/ [Set Environment], the default is [Automatic]. Using the Automatic Recognition, WideField software will connect the current PLC and get the PLC communication setting. If the PLC communication configuration is already known, select the [Fixed] mode, It will connect with the PLC quickly.

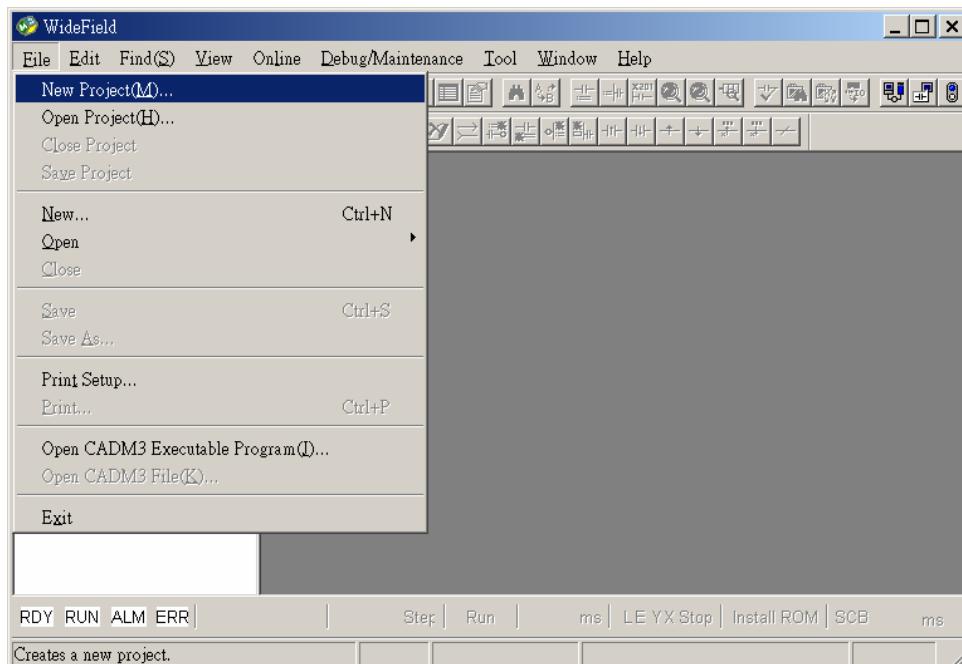

P.S Since Personal Computer link is used, when connecting to PLC it will delay about 20sec for testing communication.
